| 20 | 5 | 3.33 | 2 | 1.75 | 1.40 | Instructions:

1. Select the number of children from the left column and the children's age from the top column.
2. Follow the grid to where the two columns meet.
3. The resulting value is the number of staff required for the given age and number of children within that group. Always round up to the next number, for example 3.2 would require 4 staff members.
4. To calculate the staffing needs for a group of children larger than the chart you can add values together. Example: To determine the staff requirements for a group of 30 children age 4 , add the values for a group of 10 (.8) plus one of $20(.8+1.7)$ or 3 staff members ( 2.5 rounded up).
5. For mixed age groups add the values together. Example: A class of 15 children, made up of 8 children age 4 and 7 children ages 5 and 6 . The ratio value for the 4 -year-olds is .7 plus .5 for the 5 and 6-year-olds.
$.7+.5=1.2$, or two staff members
