GENERAL NJPDES PERMIT TO DISCHARGE STORMWATER FROM SCRAP METAL PROCESSING AND RECYCLING FACILITIES AND ESTABLISHMENTS ENGAGED IN DISMANTLING OF MOTOR VEHICLES INTO THE WATERS OF THE STATE OF NEW JERSEY
Permit No. NJ0107671

This permit controls discharges of stormwater at facilities that engage in the dismantling and recycling of materials such as derelict automobiles and other metallic scrap. It was first issued on February 1, 1995, and it is being reissued to incorporate new conditions, and to broaden its scope. As issued in 1995, the permit only regulated discharges of stormwater to surface water. As drafted, it will also regulate discharges of stormwater to ground water.

BACKGROUND

The New Jersey Department of Environmental Protection (Department) issued New Jersey Pollutant Discharge Elimination System (NJPDES) General Permit Number NJ0107671, which became effective on March 1, 1995, for those facilities assigned Standard Industrial Classification (SIC) codes 5015 and 5093. The permit was issued to regulate stormwater discharges associated with industrial activity at scrap metal recycling and vehicle dismantling facilities.

Federal NPDES regulations for stormwater discharges, in 40 CFR 122.26(b)(14)(vi.), specifically require those facilities involved in the recycling of materials, including metal scrap yards, battery reclaimers, salvage yards, and automobile junkyards including, but not limited to, SIC codes 5015 and 5093 to apply for permits. In order to comply with the federal requirements, this general permit was issued to regulate stormwater discharges to surface water from facilities with SIC codes 5015 and 5093, which conduct the types of operations referenced.

A “stormwater discharge associated with industrial activity” as defined by the EPA and the Department excludes discharges to ground water (see 40 CFR Part 122 Response to Comments and N.J.A.C. 7:14A-1.2). However, the NJPDES rules (N.J.A.C. 7:14A) authorize the NJDEP to issue general permits for discharges to surface water and/or ground water.

Permit Number NJ0107671 relies on Stormwater Pollution Prevention Plans (SPPPs), rather than numerical effluent, surface water or ground-water standards, to eliminate or minimize the discharge of pollutants to the environment. Because this permit requires the institution of Best Management Practices (BMPs) to minimize the exposure of source materials to stormwater, the permit conditions are appropriate to any scrap metal or vehicle recycling facility with a stormwater discharge, including those which discharge stormwater to ground water. Therefore, the permit is being modified to authorize discharges of stormwater to ground water in addition to the previously authorized facilities with stormwater discharges to surface water. The permit will now also authorize discharges from facilities where a significant portion of their business is derived from activities regulated under this permit but which do not operate under the designated SIC codes.
TYPE OF FACILITY OR ACTIVITY

This permit authorizes those new and existing stormwater discharges that are subject to the permitting requirements at N.J.A.C. 7:14A from scrap and waste material processing and recycling facilities (SIC code 5093) and establishments engaged in the dismantling of motor vehicles for the purposes of selling parts (SIC code 5015), except from the following facilities:

a. Facilities with stormwater discharges already authorized under another general or individual NJPDES-DSW or NJPDES-DGW permit (including an expired permit).

b. Facilities with SIC code 5093 which recycle bags, bottles, boxes, fur cuttings and scraps, oil, plastics, rags, rubber, textile waste, wastepaper and liquid wastes (e.g. solvents, transmission fluid, oil, mineral spirits and ethylene glycol) other than those collected during the dismantling of motor vehicles, or scrap metal processing.

This permit applies to all areas of the State of New Jersey. However, new discharges to surface waters classified as Category One (C1) waters or FW1 designated in the tables in N.J.A.C. 7:9B-1.15, and waters classified as Pinelands Waters (PL), as established in the Pinelands Protection Act, N.J.S.A. 13:18A-1 et seq. are not eligible for authorization under this general permit. New facilities which discharge to ground water in areas classified as Class 1-A and Class 1-PL, or which discharge to ground water that contributes to surface waters classified as C1 or FW1, are also not eligible for authorization under this general permit.

BASIS FOR PERMIT CONDITIONS

The basis for the permit was written and modified with input from the New Jersey Automobile and Metal Recyclers Association (NJ-AMRA) and by the New Jersey Chapter for the Institute of Scrap Recycling Industries (NJ-ISRI).

The present requirements are essentially the same as in the original permit although the BMPs listed in Part III have been reorganized according to an implementation schedule and their relative importance. Approximately 50% of drinking water in New Jersey is supplied by ground water. Because pollutants in any surface spills which contaminate soils may be mobilized downward as stormwater infiltrates the ground and contaminate the ground water, control of fluids by proper dismantling procedures and secondary containment is emphasized in the renewal in order to protect drinking water sources. Applicants requesting authorization to discharge stormwater under the permit are now required to submit a well search identifying nearby industrial and/or potable wells.

Sampling and analysis of pollutants are incorporated into this permit to evaluate the effectiveness of Stormwater Pollution Prevention Plans and associated BMPs. The parameters selected for sampling and analysis are based on ground water data that was made available from several automobile recycling facilities which are presently performing remedial investigations under the Department’s Site Remediation Program, in addition to data previously collected by the USEPA and others for the original permit issuance. The data indicate that metals, particularly lead, and various constituents of waste oil and gasoline are the common contaminants of concern found in soil and ground water at the types of facilities regulated under this permit. Because there are no numeric limitations in the permit, regulated facilities are
allowed to organize themselves into groups to select representative facilities that will sample stormwater discharges to fulfill monitoring requirements of this permit.

Subject facilities are currently regulated pursuant to section 402 (p) of the Federal Water Pollution Control Act. The BMPs required as part of a Stormwater Pollution Prevention Plan are authorized by the Federal Water Pollution Control Act (33 U.S.C._1251 et seq.) and the Water Pollution Control Act, N.J.S.A. 58:10A-1 et seq. These statutes are implemented by the National Pollutant Discharge Elimination System (NPDES, 40 CFR Part 122) and the New Jersey Pollutant Discharge Elimination System (NJPDES, N.J.A.C. 7:14A) permit programs.

The Department is authorized under the federal regulations (40 CFR 122.44) and under NJPDES rules (N.J.A.C. 7:14A-6.2(b)1) to impose Best Management Practices (BMPs) to control or abate the discharge of pollutants in lieu of numeric effluent limitations in NJPDES permits when the Department finds BMPs are reasonably necessary to achieve effluent limitations and standards, or to carry out the purposes and intent of the State and Federal Acts. The SPPP will include BMPs, requirements for preparing, certifying and submitting and implementing the SPPP. The objective of the SPPP is to prevent stormwater contamination through the elimination of exposure of industrial materials, machinery, waste products, or other source materials located at the facility, to stormwater that is discharged to ground water or through separate storm sewers to surface water.

**REQUEST FOR AUTHORIZATION**

In order to obtain authorization under this permit, a person shall submit a complete Request for Authorization (RFA) for Permit Number NJ0107671. Upon review of the RFA, the Department may:

1. Issue notification of authorization under this permit;

2. Deny authorization under this permit and require submittal of an application for an individual NJPDES permit or another general permit, as appropriate.

**Schedule for submittal of a Request for Authorization**

1. Requests for Authorization (RFAs) for new facilities (new construction) or new discharges must include a "Stormwater Pollution Prevention Plan Preparation Certification" in Attachment C and the "Stormwater Pollution Prevention Implementation and Inspection Certification" in Attachment D.

   a) Prior to operation, the applicant shall implement the SPPP prepared for the facility.

   b) The RFA for a new stormwater discharge must be submitted at least 180 days prior to the date of commencement of the discharge.

2. RFAs for existing facilities shall follow a schedule determined by the Department.

**Contents of the Request for Authorization**

A completed and signed RFA shall be submitted to the Department at the address specified on the Department's Scrap Metal and Motor Vehicle facility's RFA form. A completed RFA shall include all of the following information regarding the regulated facility.
1. The name, mailing address, location, and EPA identification number (if assigned) of the facility.

2. The facility’s Standard Industrial Classification (SIC) code.

3. The legal name, address, and business telephone number of all current owners and operators, and, if applicable, parent corporations, or their agents and engineers. The RFA shall also identify whether each person named is an owner, operator or parent corporation, and whether the owner is a Federal, State, or other public agency, or is a private entity.

4. The Federal tax identification number of the owner.

5. An 8.5” x 11” copy of a portion of the U.S. Geological Survey Topographic Map, 7.5 minute quadrangle series, showing the boundaries of the facility, nearby surface water bodies and the name of the quadrangle map.

6. A brief description of the facility and its current and proposed uses.

7. Proposed date upon which there may be a new stormwater discharge, if applicable.

8. A list of any individual NJPDES permits or a general permit authorizations issued to the facility.

9. The RFA certification contained in Attachment A.

**PROCEDURES FOR REACHING FINAL DECISIONS ON THE DRAFT PERMIT**

Included in the public notice are requirements for the submission of comments by a specified date, procedures for requesting a hearing, and other procedures for participation in the final agency decision, as set forth in N.J.A.C. 7:14A-15. The comment period will begin on the date the public notice is published in DEP Bulletin and will end thirty (30) days after publication.

**DEPARTMENT CONTACT**

Additional information concerning the modified Draft Permit may be obtained between the hours of 8:00 A.M. and 4:00 P.M., Monday through Friday from the Bureau of Nonpoint Pollution Control at (609) 633-7021 or (609) 292-0407.
PART I
GENERAL CONDITIONS FOR ALL NJPDES PERMITS

A. GENERAL CONDITIONS
1. Penalties for Violations N.J.A.C. 7:14-8.1 et seq.
2. Incorporation by Reference N.J.A.C. 7:14A-2.3
3. Toxic Pollutants N.J.A.C. 7:14A-6.2(a)(4i
6. Inspection and Entry N.J.A.C. 7:14A-2.11(e)
7. Enforcement Action N.J.A.C. 7:14A-2.9
8. Duty to Reapply N.J.A.C. 7:14A-4.2(e)(3)
9. Signatory Requirements for Applications and Reports N.J.A.C. 7:14A-4.9
10. Effect of Permit/Other Laws N.J.A.C. 7:14A-6.2(a)(6), (7) & 2.9(c)
11. Severability N.J.A.C. 7:14A-2.2
12. Administrative Continuation of Permits N.J.A.C. 7:14A-2.8
13. Permit Actions N.J.A.C. 7:14A-2.7(c)
15. Permit Duration and Renewal N.J.A.C. 7:14A-2.7(a) & (b)
17. Confidentiality N.J.A.C. 7:14A-18.2 & 2.11(g)
18. Fee Schedule N.J.A.C. 7:14A-3.1

B. OPERATION AND MAINTENANCE
1. Need to Halt or Reduce not a Defense N.J.A.C. 7:14A-2.9(b)

C. MONITORING AND RECORDS
1. Monitoring N.J.A.C. 7:14A-6.5
2. Recordkeeping N.J.A.C. 7:14A-6.6
3. Signatory Requirements for Monitoring Reports N.J.A.C. 7:14A-6.9

D. REPORTING REQUIREMENTS
1. Planned Changes N.J.A.C. 7:14A-6.7
2. Reporting of Monitoring Results N.J.A.C. 7:14A-6.8
   a. Hotline/Two Hour & Twenty-four Hour Reporting N.J.A.C. 7:14A-6.10(c) & (d)
   b. Written Reporting N.J.A.C. 7:14A-6.10(e)(f) & 6.8(h)
4. Duty to Provide Information N.J.A.C. 7:14A-2.11, 6.2(a) 14 & 18.1
5. Schedules of Compliance N.J.A.C. 7:14A-6.4

E. ADDITIONAL CONDITIONS
1. Operator Certification N.J.A.C. 7:10A-1.1 et seq.
2. Intermittent Discharges (if Applicable) N.J.A.C. 7:14A-6.5(a)
PART II
ADDITIONAL CONDITIONS

A. Additional Requirements Incorporated By Reference

1. Stormwater Discharge Requirement
   a. In addition to conditions in Part I of this permit, the conditions in this section applicable to activities at the permitted location are incorporated by reference. The permittee is required to comply with the regulations which are in effect as of the effective date of the final permit.
      i. Conditions for General Permits N.J.A.C. 7:14A-6.13

B. General Conditions

1. Automatic Renewal of Authorization
   a. Authorization under this permit will be automatically renewed when the permit is reissued, if the discharge remains eligible. For a facility which is authorized under the present permit, the most recently approved RFA will also be a timely and complete RFA under the reissued permit, if the permittee's annual Certifications have been acceptable.

2. Requests for Modification
   a. A permittee authorized under this general permit may request a modification of this permit based on changes to Statutes, Regulations and Federal National Pollutant Discharge Permit (NPDES) program policy (i.e. federal NPDES permits). Requests for modification shall be completed in accordance with the provisions outlined in N.J.A.C. 7:14A-16.3 and 7:14A-16.4.

3. Requirement to Apply for an Individual Permit or Other General Permit
   a. The Department may require any permittee authorized under this permit to apply for an individual NJPDES-DSW or -DGW permit, or seek authorization under another general permit. Conversely, any permittee authorized under this permit may request to be excluded from authorization under this permit by applying for an individual NJPDES permit or another general NJPDES permit.
   b. If, after receiving authorization under this permit, a facility is required by the Department to obtain another NJPDES permit that would also cover the authorized stormwater discharge, authorization under this permit remains in effect only until the date the other permit becomes effective.
   c. If such a facility fails to submit an application or RFA by the date specified by the Department, the general permit authorization remains in effect only until that date.
4. Other Discharges
   a. A discharge of any industrial waste to a septic system or a dry well is a violation of N.J.A.C. 7:14A. All such discharges shall cease immediately. All dry wells and floor drains connected to dry wells shall be properly sealed or closed within three months of the authorization date of the permit. Septic systems shall be used for disposal of sanitary sewage, only.
      i. Reports for closures of floor drains or dry wells shall be included in the SPPP.
   b. No other discharges are authorized by this permit. No other discharges shall be combined with stormwater or washwater discharges that are authorized by this permit. If any discharges, such as industrial wastewater or sanitary discharges requiring a permit are discovered, the permittee shall discontinue such discharges or apply for the appropriate NJPDES permit in accordance with the NJPDES rules (N.J.A.C. 7:14A). This permit does not authorize any discharges of sanitary sewage and non-contact cooling water, or any process wastewater other than the washwater discharges authorized under Part IV.

5. Other Permits or Regulatory Requirements
   a. Compliance with the conditions of this permit does not exempt the permittee from any other applicable permit or other regulatory requirements including, but not limited to, all Federal and other Department rules and the Pinelands Comprehensive Management Plan, N.J.A.C. 7:50.

6. Notification of Changes
   a. All permittees shall give written notice to the Department of any planned physical or operational alterations or additions to the permitted facility when the alteration or addition is expected to result in a significant change in the permittee's discharge(s) or disposal practices including the cessation of the discharge, in accordance with NJAC 7:14A-6.7.

7. Preparation and Implementation of Stormwater Pollution Prevention Plan (SPPP)
   a. Permittees are required to prepare, certify, and implement a SPPP. In addition, a SPPP shall be in compliance with the Soil Erosion and Sediment Control Act N.J.S.A. 4:24-39 et seq., for any land disturbance regulated under that act that may affect stormwater discharges regulated under this permit. The original SPPP shall be signed by the permittee, and the original retained at the facility for NJDEP inspection in accordance with Attachment B.

8. Operation and Maintenance
   a. The permittee shall be responsible for supervising and managing the operation and maintenance of this facility and any BMPs which are installed or used by the permittee to achieve compliance with the conditions of the permit and with the requirements identified in the stormwater pollution prevention plan. Proper operation and maintenance may require the operation of backup or auxiliary facilities or similar systems when necessary to achieve compliance with the
9. Annual Inspections
   
a. Beginning the first year of authorization each year thereafter, the permittee shall conduct annual inspections to assess all areas contributing to stormwater discharges, and evaluate the effectiveness of the implemented BMPs, in order to determine whether the SPPP is being implemented in accordance with permit conditions. The permittee shall determine whether additional measures are needed to meet the conditions of this permit. A summary of each annual inspection shall be included in the SPPP as required under Attachment B. All instances of noncompliance, including those previously reported to the Department in accordance with N.J.A.C. 7:14A-6.10, shall be reported to the Department in the annual inspection.

PART IV
SPECIFIC REQUIREMENTS

A. Notes and Definitions

1. Footnotes

a. The following notes specifically refer to the monitoring required by the Pollutant Characterization Study contained in the tables in Part III of the permit.

i. Estimate flow and analyze four samples per year for the two years following the implementation of the SPPP for any storm event that meets the criteria for a valid storm event as described in Part IV, Section B below. A minimum of one month is required between sampling events.

ii. For aluminum and iron, total recoverable and total dissolved quantities must be reported separately.

iii. Report the value in the units indicated. No enforceable quantified limits exist.

iv. For sample collection requirements and specific analytical methods, refer to the most recent addition of the Department’s Field Sampling Procedures Manual. To estimate flow during a monitoring event, follow the guidelines contained in the Field Sampling Procedures Manual or equivalent engineering reference.

v. Grab samples shall be collected within one hour of the onset of a discharge from a valid storm event. For total petroleum hydrocarbons, samples shall be analyzed using EPA method 418.1 or alternative methods approved by the Department’s Office of Quality Assurance. For areas where stormwater may come into contact with sources of non-petroleum based oil and grease, such as turning piles coated with synthetic oil, EPA method 413.1 shall be used. Other EPA approved methods for specific parameters may be used as they become available.

vi. 40 CFR Part 136-Method 602 modified to quantify MTBE, total xylenes and naphthalene, or Method 624 shall be used to identify the required volatile organic compounds.

vii. For petroleum sheens or product, grab samples shall be monitored visually.

2. Definitions

a. Unless otherwise stated in this permit, the definitions set forth at N.J.A.C. 7:14A-1.2 and Discharge Monitoring Report (DMR) Instruction Manual are incorporated into this permit.

i. "Annual reporting" means for the purposes of this NJPDES permit, that monitoring must be conducted four times per year for the two years following the implementation of the Stormwater Pollution Protection Plan. Monitoring data is then reported yearly on Wastewater Characterization Reports (WCRs). WCRs must be submitted annually to the Department, within two months of the end of each annual monitoring period.

ii. "Process wastewater" means any water which, during manufacturing or processing, comes into direct contact with or results from the production or use
of any raw material, intermediate product, finished product, byproduct, or waste product.

iii. "Representative Discharge Sample(s)" means a sample(s) of stormwater which originates from areas of regulated industrial activity under normal operating conditions. A representative discharge sample may require the collection of more than one (1) sample or the sampling of multiple discharge points.

If a facility has two or more discharges that, based on a consideration of activity, significant materials, and management practices within the areas drained, the effluent of one of the discharges may be sampled. The report should indicate that the permittee reasonably believes the areas are substantially identical and the quantitative data also applies to the other discharges. The SPPP must include a description of the locations of the discharges and explain in detail why the discharges are expected to have identical content. The permittee must provide an estimate of the size of each drainage area, in square feet.

iv. "Separate storm sewer" means any conveyance or system of conveyances (including roads with drainage systems, streets, catch basins, gutters, ditches, man-made channels, or storm drains) designed or used for collecting or conveying stormwater, which is not part of a "combined sewer system," and which is not part of a "Publicly Owned Treatment Works" (POTW).

v. “Source material(s)” means any materials, located at the facility and directly or indirectly related to process or other industrial activities, which could be a source of pollutants in a stormwater discharge that is subject to N.J.A.C. 7:14A. Source materials include, but are not limited to: raw materials; intermediate products; final products; waste materials; by-products; industrial machinery and fuels; and lubricants, solvents, and detergents that are related to processes or other industrial activities.

vi. "Stormwater" means stormwater runoff, snow melt runoff, surface runoff and drainage.

vii. “Valid storm event” means any storm event that produces a stormwater discharge and is preceded by 72 hours of dry weather.

viii. “WCR” means a Waste Characterization Report form provided by the Department.

B. Monitoring Requirements

1. Immediately following full implementation of the SPPP, four (4) sampling rounds per year for two years shall be collected and analyzed. Sampling events must be spaced a minimum of one month apart.

2. Tables in Part III and Appendices 3, and 4 identify the monitoring and reporting requirements. The standards identified in the Tables in Appendices 1 and 2 consist of BMPs for source control and pollution prevention, which will be included in the facility’s SPPP. The BMPs shall be monitored for effectiveness through scheduled inspections, and the results shall be recorded on inspection reports maintained at the facility.
3. Permittees authorized under the present permit shall monitor according to the requirements of Part III, Tables III-A-1, and III-B-1 and schedules in Appendices 1 and 2. Permittees authorized under the permit issued March 1, 1995 shall monitor according to the requirements in Appendices 3 and 4.

4. Facilities where motor vehicle dismantling is performed (SIC code 5015) are required to sample according to the requirement in Table III-A-1. Scrap metal processors (SIC code 5093) shall monitor according to Table III-B-1.

5. Stormwater samples shall be analyzed by a New Jersey certified laboratory (see N.J.A.C. 7:18) using EPA-approved analytical methods in 40 CFR 136. When no method is approved for a parameter, the permittee may use methods approved by the Department’s Office of Quality Assurance.

6. Stormwater discharge samples shall be collected at a point prior to entering a receiving water, or a conveyance to a receiving water, and must be representative of all regulated industrial activity occurring on the site. The discharge points from oil/water separators shall be designated as monitoring points. Samples shall be collected from areas with representative discharges.

7. A valid storm event, during which a grab sample may be collected, is any storm event that produces a stormwater discharge and has been preceded by 72 hours of dry weather.

8. Group Monitoring Plan (GMP)

   a. A GMP may be organized by facilities authorized under this permit so that administrative and technical costs associated with sampling may be shared. Facilities must provide information regarding the proposed GMP following the format presented in this section. The GMP is subject to the Department’s approval.

   b. The following administrative information shall be included in the GMP:

      i. The name of the group;

      ii. The name of the lead organization submitting the GMP;

      iii. The name, telephone number and mailing address of a designated contact;

      iv. Type of facilities participating in this GMP;

      v. Number of facilities participating in this GMP;

      vi. Number of facilities performing the sampling and analysis (4 facilities or 20 percent of group, whichever is greater).

   c. The following information regarding management of technical information shall be included in the GMP:

      i. The name, address, and phone number of the agency or firm that developed the GMP;

      ii. The name, address and phone number of the lead organization responsible for implementing the GMP, if different from the above.

   d. Discuss the responsibility of the lead organization relative to the following:
i. Developing and implementing the GMP;
ii. Evaluating and reporting group monitoring data;
iii. Revising the GMP if instructed to do so by the Department;
iv. Implementation of any required changes;
v. Providing training or other assistance to the group participants.

e. Submit a list of all participants with the following information provided:
   i. Name of the facility, address and phone number;
   ii. Contact name;
   iii. SIC Code;
   iv. Brief description of the facility; e.g. facility size, number of outfalls, percent impervious at present, type of activities conducted at site;
   v. A list or table of BMPs presently employed at each site;
   vi. Identification of the facilities which will perform the sampling and analysis for the group.

f. Include the following information related to activities performed at each facility:
   i. Activities involving the handling, storage, shipping and receiving of raw, intermediate, byproduct, final and waste products;
   ii. Source materials stored and used at the site, including materials used for the receiving, shipping, storage, handling, production and disposal of raw, intermediate, final, by-product and waste products;
   iii. Types of pollutants that could result from all activities;
   iv. Pollutants that are likely to be present in stormwater discharges in significant quantities;

g. Provide a legible site map of each facility on a minimum 8 1/2 x 11 inch sheet of paper. The site map should show locations designated for specific activities such as storage and disassembly areas and locations of implemented BMPs, such as concrete slabs and oil/water separators and shall be drawn to scale. The map shall also indicate approximate direction of stormwater flow, drainage area, outfalls and any adjacent surface water bodies.

h. Provide a map locating the facility on a portion of a USGS Quadrangle map, showing the topography and any water bodies.

i. Identify the facilities which will be participating in sampling and analysis for the group.

j. Information required for facilities included in the Sampling and Analysis Group includes
   i. Describe the facilities participating in the group and include the applicable SIC Codes. Explain the similarities (and any differences) of these facilities;
ii. Discuss why each facility was selected to perform sampling and analysis, and how these facilities will best represent the group collectively;

iii. If it is proposed to sample a reduced number of outfalls, provide a discussion demonstrating that the sample locations selected will represent the quality and quantity of stormwater discharge;

iv. For those sites being sampled, indicate the sampling location(s) on the site map required in (g), above;

v. List the analytical methods to be used to detect parameters identified in Part III of this permit. Provide justification for any methods that will be used that are not contained in 40 CFR Part 136. List the expected detection levels for each constituent analyzed;

vi. Discuss the sampling methods, sampling locations, and frequency of monitoring. Discuss who will be collecting the samples, and conducting the laboratory analysis of the samples collected. Provide a rationale for their selection.

vii. Describe the training of persons responsible for sample collection.

viii. Discuss the quality assurance/quality control program that will ensure that sample collection and analyses are conducted in accordance with State and Federal requirements.

k. Proposal for Monitoring Reports

Describe the annual report that will be submitted to the NJDEP. The discussion should include, but not be limited to:

i. Report summarizing the results with raw data;

ii. The role the lead organization will have in the organization, collection and submittal of the report;

iii. Tentative time schedule that the participants will follow to ensure timely submittal;

iv. Responsibilities and actions expected to be taken by the lead facility or organization in response to late submittal or other non-compliance activities by a participating facility;

v. Names of persons who will review, evaluate and compile monitoring data, and who will recommend changes or revisions to the SPPP.

C. Reporting Requirements

1. Individual Reporting

a. All analytical results shall be submitted on WCRs.

b. The following information shall be recorded and submitted in a data summary report:

i. date and time that the storm event began;

ii. amount of rainfall or snowfall, in inches, at the time of sampling;
iii. storm event duration in hours and/or minutes, as appropriate;
iv. number of hours since last storm event which caused a stormwater discharge;
v. date and time of collection of grab sample;
vi. analytical results.
c. The analytical results of stormwater monitoring shall be mailed to the Department at the address specified on the WCR forms which will be mailed to the facility prior to sampling.

2. Group Monitoring Reporting
   a. The Group's analytical results and the certification in Attachment F shall be submitted annually to the Department, Bureau of Nonpoint Pollution Control, no later than the end of the second month following the completed reporting period.

D. Record Keeping
   1. Agency Review
      a. If requested, the permittee shall make the SPPP available to the owner and operator of a municipal separate storm sewer system through which the stormwater is discharged. Upon review by an authorized representative, the Department may notify the permittee at any time that the SPPP does not meet one or more of the minimum permit requirements. Within 30 days of receiving such notification (unless otherwise specified by the Department), the SPPP shall be amended to adequately address all deficiencies and written certification of such amendments shall be submitted to the Department.

   2. Public Review
      a. All SPPPs prepared under this permit shall be available to the public for inspection and duplication upon request, pursuant to N.J.A.C. 7:14A-18.1. The SPPP shall be signed by the permittee and the original retained at the facility for use and NJDEP inspection. Upon request, a copy of the SPPP shall be delivered to the Department within five (5) business days of the time of the request. The permittee may claim any portion of a SPPP as confidential in accordance with N.J.A.C. 7:14A-18.3. The Department's decision regarding such claims shall be made in accordance with N.J.A.C. 7:14A-18.5.

      3. The permittee shall keep a copy of an updated SPPP, onsite and available for inspection at all times.

      4. A copy of the analytical results shall be retained in the SPPP of the facility that is conducting the sampling.

E. Submissions
   1. Deadlines and Certifications - Existing Discharges
      a. Within six (6) months of Effective Date of Permit Authorization (EDPA), the permittee shall prepare an SPPP for the authorized facility; and shall submit the
"Stormwater Pollution Prevention Plan Preparation Certification" contained in Attachment C to the Department.

i. A Well Search showing all potable, industrial and agricultural wells within ½ mile shall be included in the submission with Attachment C. Well searches are performed through the Bureau of Water Allocation at (609) 292-2957.

ii. A site map depicting locations of activities, proposed and implemented BMPs, structures, cement pads, oil/water separators, septic systems, dry wells, potable wells, and any nearby water bodies or wetlands shall be included with Attachment C.

b. Within 18 months of the EDPA, the permittee shall fully implement the SPPP prepared for the facility; and shall submit the "Stormwater Pollution Prevention Plan Implementation and Inspection Certification," contained in Attachment D, to the Department.

i. Specific BMPs that can readily be implemented, shall be completed within 7 months of the EDPA. All BMPs requiring structural changes such as cement pads shall be installed within 18 months of the EDPA.

c. Permittees authorized under the permit dated March 1, 1995 shall follow the schedule in Appendices 1 and 2.

2. Deadlines and Certifications - New Discharges

a. The SPPP shall be prepared and implemented prior to the submission of a Request for Authorization (RFA). The RFA shall contain the "Stormwater Pollution Prevention Plan Preparation Certification" contained in Attachment C, and the "Stormwater Pollution Prevention Plan Implementation and Inspection Certification," contained in Attachment D.

3. Annual Reports and Certifications

a. The permittee shall prepare an annual report summarizing the annual inspection described in the Part II, Section 9. The annual reports shall include the date of inspection and name(s) and title(s) of the inspectors and shall be accompanied by an annual certification (Attachment D) stating that the facility is in compliance with its SPPP and this permit.

i. Any incidents of noncompliance shall be identified in the certification. The steps being taken to remedy the noncompliance and to prevent such incidents from recurring shall be identified. The report and certification shall be signed by the permittee in accordance with Attachment B, Part VII.A of this permit, and a copy shall be maintained on-site for a period of five years. This period may be extended by written notice from the Department at any time. The certification shall be submitted annually as required in Appendix 1 or 2, and in accordance with Attachment B, Part VII, Section C.

4. Group Monitoring Plan - Deadlines

a. GMPs shall be completed and submitted to the Bureau of Nonpoint Pollution
Control within 12 months of the EDPA in accordance with the schedule outlined in Appendix 1 or 2.

b. GMPs must be approved within 16 months of the EDPA so that the sampling schedule can be instituted. The EDPA for group monitoring purposes will be the date of the first approved authorization within the organized group.

5. Group Monitoring Plan - Certifications

a. The Permittee participating in group monitoring shall complete the applicable portion of Attachment C for Group Monitoring for inclusion in the GMP.

b. The certification provided in Attachment E shall be submitted with the GMP.

F. Unit Specific

1. The Stormwater Pollution Prevention Plan (SPPP)

a. Noncompliance with BMPs, or noncompliance with the schedule of implementation of BMPs shall be considered violations of this permit. After institution of the SPPP, evidence of uncontrolled discharges of fluids to the ground, such as sheens on effluent and excessive petroleum odors, shall be considered violations of this permit.

b. The SPPP shall identify existing and planned BMPs. The SPPP shall be signed by the permittee and the original copy retained at the facility for use and NJDEP inspection. A copy shall be supplied to the Department within five (5) business days of a request.

c. The SPPP shall be prepared in accordance with Attachment B, certified in accordance with Attachment C, and implemented according to Attachment D and Appendix 1 or 2. The Certifications of Attachments C and D shall be signed and submitted to the Department to the address specified on the certifications. Certifications will be mailed to the permittee with the Permit Authorization.

d. The SPPP shall demonstrate that, where practicable, there will be no exposure of stormwater to industrial materials, machinery, waste products or other source materials located at the facility.

e. In areas where it is not practicable to eliminate all exposure of source materials, the permittee shall minimize the effect of exposure of source material to stormwater discharges to the maximum extent practicable through the implementation of BMPs. The BMPs listed in Section 2 below, or the equivalent, must be included in the permittee’s SPPP. An equivalent BMP must provide the same level of protection as the BMPs listed below. A description of the BMP, the method used to determine the equivalent BMP, and a comparison to the listed BMP shall be documented in the SPPP. BMPs for activities not performed at a permittee’s site should be disregarded.
f. Amendments to the SPPP Plan
   i. SPPPs may be amended so long as they continue to meet permit requirements. Any amended SPPPs shall be signed, certified, implemented, retained, and otherwise treated in the same manner as the original SPPP.

2. Site Specific Best Management Practices (BMPs)
   a. Potable Well Monitoring
      i. A permittee with a potable well onsite shall sample the well once, at a point before the distribution system, and analyze for benzene, ethylbenzene, toluene, xylenes, and methyl-t-butyl ether (MTBE) using a modified 40 CFR Method 502, unless sampling was performed during the year prior to the EDPA. The results shall be included in the SPPP. The local Health Department shall be notified if any results are above Drinking Water Standards. The Drinking Water Standards are: benzene, 1 microgram/liter (ug/l); ethylbenzene, 700 ug/l; toluene, 1,000 ug/l; xylenes, 1,000 ug/l; MTBE, 70 ug/l.

   b. Spill Response
      i. The permittee shall assemble spill kits containing appropriate absorbent materials and equipment for recovering spills, to be kept onsite to remediate spills.
      ii. To report a spill or for emergency response to a spill, the permittee shall call the Department Hotline at (609) 292-7172. For purposes of this permit, recovered spills on impermeable surfaces are not required to be reported.

   c. Inbound Material Inspection Program
      i. A vehicle inspection area shall be established where automobiles and other scrap items which may contain fluids will be inspected for leaks and/or evidence of discharges. Identified leaks shall be eliminated or controlled as described in (d.) below.
      ii. Scrap/waste materials that have the potential to contain polychlorinated biphenyls (PCBs) shall also be inspected, removed and properly stored for disposal. All PCB contaminated materials will be disposed of in accordance with all state and federal environmental statutes, and regulations. Employees inspecting equipment for PCBs shall receive specific training in identifying components containing PCBs. Training shall be documented in the SPPP.
      iii. The Quality Control Plan developed in accordance with N.J.A.C. 7:26-6.3(a)5 shall constitute the inbound material inspection program for scrap metal shredding facilities. All other facilities may develop a similar quality control plan using N.J.A.C. 7:26-6.3(a)5 as guidance. The metal shredding facility must clearly document in the SPPP that their Quality Control Plan is being used as the Inbound Material Inspection Program. A copy of the plan shall be included in the SPPP for Departmental inspection.

   d. Collection of Liquids from Vehicles and other Scrap Material
i. Fluids shall be drained from vehicles and other scrap material containing fluids in an area designated for that activity. The following fluids must be drained: fuels, crankcase oil, radiator fluids, and transmission fluids. Fluids do not need to be drained from sealed units that are intended to be sold as complete units and do not leak. Such units include, but are not limited to, engines, steering gear units, transmissions and other drive train components. Oil filters may be gravity-drained for a period of time that is sufficient to remove oils and may be replaced on engines intended for resale, to prevent damage to the interiors. Used filters shall be properly disposed of in accordance with NJDEP and USEPA guidance, and with all State and Federal environmental statutes and regulations.

ii. Fluids must be drained in a manner that prevents exposure of such fluids to stormwater or the ground surface. The vehicle inspection area where fluids are drained shall be a bermed pad constructed of concrete or other impermeable material. Pads and berms shall be regularly maintained and kept free of liquid petroleum products.

iii. Scrap vehicles that have not been drained of fluids may be accepted from out of state. However, those vehicles shall also be inspected and drained of fluids upon arrival at the facility.

iv. If a damaged vehicle cannot be drained of fluids, the permittee is still responsible for preventing leaking fluids from coming in contact with the ground or stormwater.

v. Leaking materials stored outdoors shall be contained in a manner that will prevent contact of fluids with stormwater or the ground surface. If it is operationally impractical to cover all leaking materials, controls shall be implemented to contain and collect leaking fluids and contaminated stormwater. A schedule of regular maintenance and inspections of the controls shall be established.

e. Secondary Containment of Liquid or Non-Liquid Wastes and other Hazardous Materials

i. Containers of materials other than scrap material, including but not limited to paint, solvents, automotive fluids and lubricants, oils, antifreeze, brake fluid, cleaning solvents, soiled rags, used absorbents and pesticides, shall be stored in secondary containment and shall not be exposed to rainfall or stormwater.

f. Batteries

i. Batteries shall be removed from vehicles prior to crushing. Scrap metal shredding facilities shall remove batteries in accordance with their approved Quality Control Plan as described in N.J.A.C. 7:26-6.3(a)5i. All other facilities shall handle scrap batteries in the following manner:

ii. Batteries shall be separated from other scrap.

iii. Cracked or broken batteries shall be handled in accordance with applicable Federal and State environmental statutes and regulations.
iv. Batteries stored outdoors shall be kept under cover, on an impervious surface. Any leaking fluids shall be contained and handled in accordance with applicable Federal and State environmental statutes and regulations.

g. Equipment Washing

i. Wastewater from washing of equipment exteriors using high pressure water spray (i.e. pressure or power washing) that does not contain any cleaning additives, including, but not limited to, surfactants, detergents and solvents, is authorized to be discharged to surface water or groundwater under this permit.

ii. Groundwater or surface water discharges of wastewater from washing of equipment where cleaning additives, such as surfactants, detergents and solvents, are used, are not authorized by this permit.

iii. Indoor equipment washing operations shall be operated and maintained in such a way as to prevent the transfer of residual material and pollutants to the environment where it may come into contact with stormwater.

h. Parts Cleaning/ Solvent Degreasing

i. Cleaning and degreasing of parts from vehicles and equipment shall be performed indoors, or under cover on a pad, with adequate ventilation to protect workers’ health. Such operations shall be performed and maintained in a manner that prevents any contact of cleaning or degreasing products with stormwater or the ground.

i. Soil Erosion and Sediment Control

i. Erosion and sediment control plans shall be instituted in accordance with the Soil Erosion and Sediment Control Act, N.J.S.A. 4:24-39 et seq., using practices outlined in “Standards for Soil Erosion and Sediment Control in New Jersey”

ii. The facility shall prepare and implement a Soil Erosion and Sediment Control Plan to stabilize soils, as part of the SPPP. The plan shall identify areas that have a high potential for soil erosion or a known soil erosion problem. Appropriate vegetative, structural, or stabilization measures shall be selected to limit erosion in these areas.

iii. The SPPP shall contain any certifications or municipal approvals required under N.J.S.A. 4:24-39 et seq., for construction activities which disturb less than five acres of total land area and are not part of a larger common plan of development or sale.

iv. Construction activities disturbing five acres or more of total land area, or less than five acres which are part of a greater than five acre plan of development or sale, require authorization under General NJPDES Permit No. NJ0088323 or an individual NJPDES permit.

v. Soil piles larger than 10 cubic yards, that will be onsite for longer than 14 days, shall be stabilized following Department guidance in “Management of Excavated Soils,” to limit soil erosion.
j. Potentially Contaminated Soil Piles
   i. Potentially contaminated soils shall be staged on an impermeable liner and covered with impermeable cover. The soils shall be classified, and if determined to be contaminated with pollutants, disposed in accordance with the Department's "Management of Excavated Soils" Guidance Document, or the Departments most recent policy. Documentation for soil pile classification and/or disposal shall be retained in the SPPP. Contaminated soil piles must be removed within 6 months.

k. Engine Blocks/Turnings Piles
   i. All used engine blocks, cores, transmission components, turnings, and other oily materials shall be placed on a concrete pad large enough to contain and support the entire pile of engine blocks or turnings. The drainage area of the concrete pad must drain into an oil/water separator. The concrete pad shall be graded to allow all of the residual oil and any stormwater to drain to the oil/water separator treatment system. The oil/water separator shall be designed to meet the criteria described in Section 2.o, below. As an alternative, engine blocks and turnings may be stored in buildings or leak-proof containers.

l. Hydraulic Processing Systems
   i. The hydraulic equipment shall be maintained in good working condition to prevent leaks and hydraulic line ruptures (e.g., routine and preventative maintenance). Hydraulic hoses shall be inspected periodically for cracks or leaks and documented in the SPPP in accordance with the provisions outlined in Attachment B.

   ii. Stationary Hydraulic Systems
       A containment system, such as a concrete pad with berms, shall be provided under the hydraulic systems of stationary scrap processing equipment exposed to stormwater. Runoff from such bermed areas shall be discharged into an oil/water separator or other treatment system.

   iii. Portable and Mobile Hydraulic Systems
       All portable hydraulic processing equipment shall have provisions, such as drip trays, to collect and contain leaks and drips from hydraulic components.

m. Inspection Schedule
   i. Once the SPPP has been implemented, the permittee shall conduct periodic inspections of the facility in accordance with the permit to assess all areas contributing to the stormwater discharge authorized by this permit and to evaluate the effectiveness of implemented BMPs. The inspections shall insure that the SPPP complies with, and is implemented in accordance with, the permit, and whether additional measures are needed to meet the conditions of this permit. Inspections during dry periods allow facilities to identify and address any problems prior to a storm event, thereby minimizing the chance for storm water contamination. Inspections during significant storm events ensure that measures are functioning as originally intended and provide an opportunity
for facilities to observe what materials and/or activities are exposed to stormwater.

n. Operation and Maintenance
   i. The permittee shall be responsible for supervising and managing the operation and maintenance of any BMPs which are installed or used to achieve compliance with the conditions of this permit and with the requirements identified in the SPPP. Proper operation and maintenance also requires the operation of backup or auxiliary facilities or similar systems when necessary to achieve compliance with the conditions of the permit.

o. Oil/Water Separator Systems
   i. Oil/water separators shall be designed with a hydraulic capacity for a rainfall event with an intensity of two (2) inches per hour for the drainage area. The system shall be designed by a New Jersey licensed professional engineer. Instructions for operation and maintenance of the system shall be provided by the professional engineer and included with the SPPP.
   ii. The discharge from the oil/water separator shall achieve a maximum concentration of oil and grease (total petroleum hydrocarbons) of 15 mg/l, quantified by EPA analytical method 418.1, or another method approved by the Department’s Office of Quality Assurance.
   iii. Any contaminated stormwater shall be properly managed and disposed.

p. Automobile Shredder Residue (Fluff Material)
   i. All automobile shredder residue (fluff material) that is exposed to stormwater runoff shall be collected and stored in a paved and contained area.

q. Storage Tanks and Appurtenant Piping
   i. Storage tanks include stationary above ground storage tanks and mobile waste oil tanks or fuel tanks. (Underground Storage Tanks are regulated by N.J.A.C. 7:14B, Underground Storage of Hazardous Substances and are permitted through the Department’s Bureau of Underground Storage Tanks.)
   ii. Stormwater that comes into contact with above-ground storage tanks and piping may be discharged if it has not been exposed to the materials stored in the tank systems.
   iii. Standard operating procedures shall be established to prevent exposure of fuels from spills, leaks or overfills to stormwater. The methods used to determine that stormwater is not being exposed to the materials stored in the tank systems shall be described in the SPPP, in accordance with Attachment B.
   iv. The operator shall be present during product transfer.
   v. Spill kits shall be located in close proximity to storage tanks and areas of transfer for quick response to spills or leaks.
## APPENDIX 1

**DEADLINES AND CERTIFICATIONS FOR FACILITIES AUTHORIZED UNDER
PERMIT EFFECTIVE MARCH 1, 1995**

<table>
<thead>
<tr>
<th>Compliance Activity</th>
<th>Deadlines</th>
<th>Certification(s) or other requirements</th>
</tr>
</thead>
<tbody>
<tr>
<td>Develop SPPP Identify if Part of Group Monitoring</td>
<td>6 months after EDPA</td>

Notes: Table 1A

1. Frequency (Four/year) - estimate flow and analyze four samples per year for the two years following the implementation of the SPPP for any storm event that meets the criteria for a valid storm event as described in footnote 4, below.

2. ‘NL’ denotes ‘Not limited’ with monitoring and reporting required.

4. Grab - grab samples shall be collected within 90 minutes from the onset of a discharge from a valid storm event. The criteria for a valid storm event, during which a grab sample shall be collected, is any storm event that produces a stormwater discharge and has not been preceded by another storm event which produced a stormwater discharge within the last 72 hours. All stormwater samples shall be collected in accordance with the most recently published edition of "NJDEP Field Sampling Procedures Manual".

5. Samples shall be analyzed using EPA method 418.1 for petroleum based oil and grease, or another EPA approved method for the parameter if it becomes available. For areas where stormwater may come into contact with sources which may contain non-petroleum based oil and grease, such as turning piles coated with synthetic oil, EPA method 413.1 shall be used, or another EPA approved method for the parameter if it becomes available.
### APPENDIX 4

Notes: Table 1B

*Motor Vehicle Dismantlers, with SIC code 5015, that bale, shear or shred motor vehicles and scrap metal must sample for the additional metal parameters listed above. Facilities that flatten automobiles for the purpose of transporting are not required to sample for the additional parameters listed above.

1. --Frequency (Four/year) - estimate flow and analyze four samples per year for the two years following the implementation of the SPPP for any storm event that meets the criteria for a valid storm event as described in footnote 4, below.

2. --Report Total Recoverable and Total Dissolved separately

3. --Grab - grab samples shall be collected within 90 minutes from the onset of a discharge from a valid storm event. The criteria for a valid storm event, during which a grab sample shall be collected, is any storm event that produces a stormwater discharge and has not been preceded by another storm event which produced a stormwater discharge within the last 72 hours. All stormwater samples shall be collected in accordance with the most recently published edition of "NJDEP Field Sampling Procedures Manual". The table below contains the monitoring requirements for facilities authorized prior to (issuance date of this permit).
ATTACHMENT A

RFA Certification

Every Request for Authorization (RFA) shall include the following RFA certification using the Department's required forms. All signatures on this RFA certification shall be notarized by an authorized Notary Public.

"I certify under penalty of law that this Request for Authorization and all attached documents were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of those persons directly responsible for gathering the information, I believe that the submitted information is true, accurate and complete, and that as far as I know, none of the stormwater discharges for which this Request for Authorization is submitted are excluded from authorization according to the Factsheet of NJPDES Permit No. NJ0107671.

"I am aware that pursuant to the Water Pollution Control Act, N.J.S.A. 58:10A-1 et seq., there are significant civil and criminal penalties for making a false statement, representation, or certification in any application, record, or other document filed or required to be maintained under that Act, including fines and/or imprisonment."

The RFA certification shall be signed as follows:

(1) For a corporation, by a responsible corporate officer as described in N.J.A.C. 7:14A-4.9(a)1;

(2) For a partnership or sole proprietorship, by a general partner or the proprietor, respectively;

(3) For a municipality, State, Federal or other public agency, by either a principal executive officer or ranking elected official; or

(4) For a corporation or other entity under (1), (2), or (3) above, by a duly authorized representative, provided that:
   (a) the representative is authorized by a person described in (1), (2), or (3) above;
   (b) this authorization specifies either an individual or a position responsible for the overall operation of the regulated facility or activity such as plant manager, operator of a well or well field, superintendent, position of equivalent responsibility, or an individual or position having overall responsibility for environmental matters for the company or public agency. A duly authorized representative may thus be either a named individual or any individual occupying a named position; and
   (c) the written authorization is submitted to the Department.

A separate RFA certification shall be signed and submitted for each person submitting the RFA.
ATTACHMENT B

Stormwater Pollution Prevention Plan

The following outline provides the key elements of an acceptable Storm Water Pollution Prevention Plan (SPPP). The purpose of the SPPP is to meet the following objectives:

(1) To identify potential sources of pollution and source materials onsite which may reasonably be expected to affect the quality of stormwater discharges;

(2) To describe and ensure that practices are implemented to eliminate and/or reduce pollutants from source materials in stormwater discharges associated with industrial activity;

(3) To ensure compliance with the terms and conditions of this permit.

A. Stormwater Pollution Prevention Team

The permittee shall form and identify a Stormwater Pollution Prevention Team in the SPPP. The SPPP shall name a specific individual or individuals within the facility organization who are members of the team. The team is responsible for developing the SPPP in accordance with good engineering practices, and in the plan's implementation, and maintenance. The plan shall clearly identify the responsibilities of each team member. The activities and responsibilities of the team shall address all aspects of the facility's SPPP which are provided below.

B. Description of Existing Environmental Management Plans

The SPPP team shall evaluate the facility's existing environmental management plans and programs for consistency with this permit and determine which provisions, if any, from these other plans can be incorporated by reference into the SPPP.

Examples of plans which may be referred to when applicable to the site include: Discharge Prevention Containment and Countermeasure (DPCC, N.J.A.C. 7:1E), Discharge Cleanup and Removal (DCR, N.J.A.C. 7:1E), Preparedness Prevention and Contingency Plan (PPCP, 40 CFR Parts 264 and 265), the Spill Prevention Control and Countermeasures (SPCC) requirements (40 CFR Part 112), the National Pollutant Discharge Elimination System Toxic Organic Management Plan (NPDESTOMP, 40 CFR Parts 413, 433, and 469), and the Occupational Safety and Health Administration (OSHA) Emergency Action Plan (29 CFR Part 1910). A copy of any plans referred to in the SPPP should be kept on-site with the SPPP.

C. Site Assessment

The Site Assessment shall describe the physical facility and the potential pollutant sources (materials, activities and areas) which may be reasonably expected to affect the
quality of stormwater discharges. The key elements of the site assessment shall include, at a minimum, the following requirements:

1. **Inventory Requirements**
   Each facility must develop and update annually, as appropriate, an inventory which includes, at a minimum, the following:
   
   a) A list of the general categories of source materials that have been used, loaded/unloaded, stored, treated, spilled, leaked and/or disposed onsite in a manner to allow exposure to stormwater; and
   
   b) A list of any domestic wastewater, non-contact cooling water or process waste water, that is generated at the facility and discharged through separate storm sewers (see definition in Part IV of the permit) to surface waters. List any current NJPDES permits or permit applications that the facility may have for such discharges.

2. **Mapping Requirements**
   
   A site map, drawn to an appropriate scale, that clearly shows the following items must be submitted.
   
   a) buildings and other permanent structures;
   
   b) paved areas and roadways;
   
   c) surface water bodies (e.g., rivers, lakes, streams, bays, estuaries) that are located on or abut the property which receive or may receive stormwater from the site;
   
   d) location of all stormwater discharge points and outfalls;
   
   e) location of each point or sewer segment, where domestic waste water, process waste water, or non-contact cooling water generated by the facility enters storm sewers that discharge to surface waters;
   
   f) outline of the drainage area within the facility boundaries for each stormwater outfall and a depiction of flow direction (e.g., arrow head) of stormwater in each drainage area;
   
   g) locations where source materials are likely to be exposed to stormwater, and the following activities and/or areas, at a minimum: storage areas, palleted materials, outdoor handling, treatment or disposal areas, loading and/or unloading areas, manufacturing and/or processing areas, waste storage areas, vehicle/equipment maintenance areas, vehicle/equipment fueling areas, hazardous waste storage or disposal areas, areas of spills and/or leaks of source materials, and access routes;
   
   h) location of existing stormwater structural control measures (e.g., containment, berms, oil/water separators, detention or retention
basins, grassed swales); and

i) areas of existing and potential soil erosion.

3. Narrative Description of Existing Conditions

The SPPP shall describe the existing management of all source materials at the facility which are allowed contact with stormwater. The narrative description shall address the following where appropriate:

a) any discharges of domestic wastewater, non-contact cooling water, or process water;

b) description of type of industrial activities and/or areas (e.g., fueling, material handling, manufacturing or processing areas) at the site;

c) the actual or potential pollutant categories associated with each industrial area and/or activity where source materials are likely to be exposed to stormwater including, but not limited to: fueling stations, loading/unloading areas, maintenance shops, areas where spills and/or leaks of source materials frequently occur, equipment or vehicle cleaning areas, outdoor storage areas, outdoor manufacturing or processing areas, onsite waste disposal areas, above ground liquid storage tanks, outside storage of raw materials, by-products, or finished products (e.g., fueling area - diesel fuels, gasoline, petroleum hydrocarbons); and

d) a description of existing management practices employed to: eliminate contact of source materials with stormwater; minimize or reduce pollutants from source materials through structural or non-structural measures; divert stormwater to specific areas on or off-site, including diversion to containment areas, holding tanks, treatment facilities, or sanitary or combined sewers; treat stormwater discharging from the site; and prevent or permit any discharges of domestic wastewater, non-contact cooling water, or process wastewater to surface water.

e) areas where actual or potential spills of source materials exposed to stormwater can occur, and their accompanying drainage points shall be identified clearly in the SPPP. Where appropriate, specific material handling procedures, storage requirements and use of equipment such as diversion valves shall be developed and practiced to prevent and/or eliminate spills and/or leaks of source materials from being exposed to stormwater. Procedures for cleaning up spills shall be specifically included in the plan and made available to the appropriate personnel through scheduled employee training. In addition, the facility shall provide or otherwise make available to its personnel the appropriate and necessary spill cleanup equipment to effect an immediate and thorough spill cleanup.
D. Best Management Practices (BMP) Selection and Plan Design

The permittee shall evaluate the information from the site assessment phase of this plan to identify potential and existing sources of stormwater contaminated by source material. Based upon the site assessment performed, the permittee shall develop BMPs that will effectively eliminate or reduce pollutant loading in stormwater discharges from the facility in accordance with the following sections. BMPs are measures used to prevent or mitigate pollution from any type of activity. The evaluation and selection of the BMPs addressing each area, and/or activity where source materials are exposed to stormwater, shall be documented in the SPPP. BMPs listed in Part IV, Section F2 of this permit, or equivalent BMPs, must be included in the SPPP.

The SPPP shall include a system to routinely and continually evaluate the SPPP for effectiveness, any flaws that may have developed, and maintenance that may be required. The routine evaluation must include, but not be limited to, regular and annual inspections, inspection logs and records, internal reporting, plan revisions to correct any flaws detected in the SPPP or to reflect changes/additions at the facility, and logs of preventative maintenance performed at the facility. In addition, the Annual Reports and Certifications required under Part IV are integral to the evaluation process.

E. Implementation Schedule

The SPPP shall include an implementation schedule for all structural and non-structural BMPs including a schedule(s) for removal, coverage, minimization of exposure of source material to stormwater, and/or stormwater diversion or treatment. The schedule shall meet the deadlines established in the permit.

Upon completion of the initial SPPP, those BMPs (e.g. spill response, good housekeeping, maintenance; and logs and schedules of same, etc.) that may readily be implemented shall be done so within 30 days, if not already practiced.

F. Plan Location and Public Access

1. The SPPP and inspection and preventative maintenance records or logs shall be maintained on site at all times. These documents must be made available, upon request, to a representative of the Department and to the owner and operator of any municipal separate storm sewer receiving the stormwater discharge.

2. The SPPP shall be signed by the permittee, the original retained at the facility for use and NJDEP inspection. Upon request by Department personnel a copy shall be delivered within five (5) business days from the time of the request.

G. For facilities subject to the Emergency Planning and Community Right-to-Know Act (EPCRA) Section 313, the SPPP shall include, or cite the location of, any spill reports prepared under that Act.
H. Facilities with SPCC Plans, DPCC Plans, or DCR Plans
The SPPP shall include, or cite the location(s) of, any Spill Prevention Control and Countermeasure Plan (SPCC Plan) prepared under 40 CFR 112 and section 311 of the Clean Water Act, 33 U.S.C.§1321; and any discharge prevention, containment and countermeasure plan (DPCC plan) and discharge cleanup and removal plan (DCR plan) prepared under N.J.A.C. 7:1E.

I. Facilities Undergoing Construction Activities
Whenever construction activities are undertaken at the facility, the SPPP shall be amended, if necessary, so that the SPPP continues to be accurate and to meet permit requirements.
ATTACHMENT C
Stormwater Pollution Prevention Plan Preparation Certification

The following certification shall be signed and submitted to the Department using the appropriate Department forms.

"I certify under penalty of law that I have personally examined and am familiar with the information in this Stormwater Pollution Prevention Plan Preparation (SPPP) Certification and all attached documents.

"I further certify that the SPPP Certification and all attached documents were prepared by qualified personnel under my direction or supervision in accordance with a system designed to assure that this information was properly gathered and evaluated. Based on my inquiry of those persons directly responsible for gathering this information, I believe and certify that the information in the SPPP and all attached documents, is true, accurate and complete.

"I certify that the SPPP referred to in this Stormwater Pollution Prevention Plan Preparation Certification has been signed and is being retained at the facility in accordance with Part IV.F, of NJPDES Permit No. NJ0107671, and that this stormwater pollution prevention plan will be fully implemented at the facility in accordance with the terms and conditions of that permit. I further certify that the SPPP and all applicable attachments for this permitted facility have been in accordance with Attachment 2 and the deadlines of the permit. I am aware that pursuant to the Water Pollution Control Act, N.J.S.A. 58:10A-1 et seq., there are significant civil and criminal penalties for making a false statement, representation, or certification in any application, record, or other document filed or required to be maintained under that Act, including fines and/or imprisonment."

This facility is participating in a Group Monitoring Plan (GMP): Yes  |  No

Name of the lead organization submitting the GMP: ____________________

This certification shall be signed as follows:

(1) For a corporation, by a responsible corporate officer as described in N.J.A.C. 7:14A-4.9(a)1;

(2) For a partnership or sole proprietorship, by a general partner or the proprietor, respectively;

(3) For a municipality, State, Federal or other public agency, by either a principal executive officer or ranking elected official; or

(4) For a corporation or other entity under (1), (2), or (3) above, by a duly authorized representative, provided that:
   (a) the representative is authorized by a person described in (1), (2), or (3) above;

   (b) this authorization specifies either an individual or a position responsible for the overall operation of the regulated facility or activity such as plant manager, operator of a
well or well field, superintendent, position of equivalent responsibility, or an individual 
or position having overall responsibility for environmental matters for the company or 
public agency. A duly authorized representative may thus be either a named individual 
or any individual occupying a named position; and

(c) the written authorization is submitted to the Department.

Whenever there are two or more permittees for the facility, all of those permittees shall jointly 
submit this Stormwater Pollution Prevention Plan Preparation Certification.

Any changes in the facility's name, address, telephone number, contact, parent company, etc., 
are to be recorded on the attached Standard Change Form.
ATTACHMENT D

Stormwater Pollution Prevention Plan Implementation and Inspection Certification

The following certification shall be signed and submitted to the Department by the owner/operator using the appropriate Department forms.

"I certify under penalty of law that I have personally examined and am familiar with the information in this Stormwater Pollution Prevention Plan (SPPP) Implementation and Inspection Certification and all attached documents.

"I certify that this SPPP Implementation and Inspection Certification and all attached documents were prepared by qualified personnel under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated this information. Based on my inquiry of those persons directly responsible for gathering this information, I believe and certify that the information in this SPPP Implementation and Inspection Certification and all attached documents is true, accurate and complete.

"I certify that the facility has been inspected to identify areas contributing to the stormwater discharge authorized under NJPDES permit No. NJ0107671 and to evaluate whether the Stormwater Pollution Prevention Plan (SPPP) prepared under that permit complies with part IV.F., of that permit and is being properly implemented.

"I certify that the SPPP will continue to be fully implemented at this facility in accordance with the terms and conditions of NJPDES Permit No. NJ0107671. I also certify that this facility does not generate and discharge to surface waters, any domestic wastewater, non-contact cooling water, or process waste water (including leachate and contact cooling water) unless that discharge is authorized by another NJPDES permit or identified in an application (or request for authorization) submitted for another NJPDES permit.

"I certify that this facility does not generate and discharge, through storm sewers to surface waters, any domestic wastewater, non-contact cooling water, or process waste water (including leachate and contact cooling water) other than stormwater (or wash water authorized under this permit), unless that discharge is authorized by another NJPDES permit or identified in an application (or request for authorization) submitted for another NJPDES permit.

"I certify that this facility is not in violation of any conditions of Permit No. NJ0107671 for preparation and implementation of a SPPP, except for incidents of noncompliance (which are noted in the attached report). For any incidents of noncompliance identified in the annual inspection (or made known to me during the course of the past year), I have attached a report identifying these incidents, and identifying steps taken or being taken to remedy the noncompliance and to prevent such incidents from recurring. If the attached report identifies any incidents of noncompliance, I certify that any remedial or preventative steps identified therein were or will be taken in compliance with the schedule set forth in the attachment to this certification. I am aware that pursuant to the Water Pollution Control Act, N.J.S.A. 58:10A-1 et seq., there are significant civil and criminal penalties for making a false statement, representation, or certification in any application, record, or other document filed or required to be maintained under that Act, including fines and/or imprisonment."
This certification shall be signed as follows:

(1) For a corporation, by a responsible corporate officer as described in N.J.A.C. 7:14A-4.9(a)1;

(2) For a partnership or sole proprietorship, by a general partner or the proprietor, respectively;

(3) For a municipality, State, Federal or other public agency, by either a principal executive officer or ranking elected official; or

(4) For a corporation or other entity under (1), (2), or (3) above, by a duly authorized representative, provided that:
   (a) the representative is authorized by a person described in (1), (2), or (3) above;

   (b) this authorization specifies either an individual or a position responsible for the overall operation of the regulated facility or activity such as plant manager, operator of a well or well field, superintendent, position of equivalent responsibility, or an individual or position having overall responsibility for environmental matters for the company or public agency. A duly authorized representative may thus be either a named individual or any individual occupying a named position; and

   (c) the written authorization is submitted to the Department.

The permittee shall also identify the number of the NJPDES permit of any discharges through storm sewers to surface waters of domestic wastewater, non-contact cooling water, or process waste water other than stormwater generated by the facility. If no NJPDES permit number has been assigned yet, the permittee shall provide a copy of the cover page of the application or request for authorization in an attachment to this certification.

Any changes in the facility's name, address, telephone number, contact, parent company, etc., are to be recorded on the attached Standard Change Form.
ATTACHMENT E

Stormwater Group Monitoring Plan Preparation Certification

The following certification shall be signed and submitted to the Department using the appropriate department forms.

"I certify under penalty of the law that I personally examined and am familiar with the information in this Stormwater Group Monitoring Plan and all attached documents. I am aware that there are significant civil and criminal penalties for submitting false, inaccurate or incomplete information, including fines and or imprisonment.

"I further certify that the Stormwater Group Monitoring Plan and all attached documents were prepared by personnel under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate information. Based on my inquiry of those persons directly responsible for gathering this information, I believe that the information in this Stormwater Group Monitoring Plan and all attached documents is true, accurate and complete.

This certification shall be signed as follows:

(1) For a corporation, by a responsible corporate officer as described in N.J.A.C. 7:14A-4.9(a)1;

(2) For a partnership or sole proprietorship, by a general partner or the proprietor, respectively;

(3) For a municipality, State, Federal or other public agency, by either a principal executive officer or ranking elected official; or

(4) For a corporation or other entity under (1), (2), or (3) above, by a duly authorized representative, provided that:

    (a) the representative is authorized by a person described in (1), (2), or (3) above;

    (b) this authorization specifies either an individual or a position responsible for the overall operation of the regulated facility or activity such as plant manager, operator of a well or well field, superintendent, position of equivalent responsibility, or an individual or position having overall responsibility for environmental matters for the company or public agency. A duly authorized representative may thus be either a named individual or any individual occupying a named position; and

    (c) the written authorization is submitted to the Department.

The permittee shall also identify the number of the NJPDES permit of any discharges through storm sewers to surface waters of domestic wastewater, non-contact cooling water, or process waste water other than stormwater generated by the facility. If no NJPDES permit number has been assigned yet, the permittee shall provide a copy of the cover page of the application or request for authorization in an attachment to this certification.

Any changes in the facility's name, address, telephone number, contact, parent company, etc., are to be recorded on the attached Standard Change Form.
ATTACHMENT F

Stormwater Group Monitoring Plan Implementation Certification

The following certification shall be signed and submitted to the Department using the appropriate department forms.

"I further certify that the Stormwater Group Monitoring Plan and all attached documents were implemented by qualified personnel under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate information, based on my inquiry of those persons directly responsible for gathering this information. I am aware that there are significant civil and criminal penalties for submitting false, inaccurate or incomplete information, including fines and or imprisonment. I believe that the information in this Stormwater Group Monitoring Plan and all attached documents is true, accurate and complete."

This certification shall be signed as follows:

1. For a corporation, by a responsible corporate officer as described in N.J.A.C. 7:14A-4.9(a)1;
2. For a partnership or sole proprietorship, by a general partner or the proprietor, respectively;
3. For a municipality, State, Federal or other public agency, by either a principal executive officer or ranking elected official; or
4. For a corporation or other entity under (1), (2), or (3) above, by a duly authorized representative, provided that:
   a. the representative is authorized by a person described in (1), (2), or (3) above;
   b. this authorization specifies either an individual or a position responsible for the overall operation of the regulated facility or activity such as plant manager, operator of a well or well field, superintendent, position of equivalent responsibility, or an individual or position having overall responsibility for environmental matters for the company or public agency. A duly authorized representative may thus be either a named individual or any individual occupying a named position; and
   c. the written authorization is submitted to the Department.

The permittee shall also identify the number of the NJPDES permit of any discharges through storm sewers to surface waters of domestic wastewater, non-contact cooling water, or process waste water other than stormwater generated by the facility. If no NJPDES permit number has been assigned yet, the permittee shall provide a copy of the cover page of the application or request for authorization in an attachment to this certification.

Any changes in the facility's name, address, telephone number, contact, parent company, etc., are to be recorded on the attached Standard Change Form.
