

# The USGS Upper Delaware Decision Support System (DSS) for Ecological Flows

**Kelly O. Maloney**, Heather S. Galbraith, Jeffrey Cole, & Carrie Blakeslee *Northern Appalachian Research Lab, Wellsboro PA*

Colin B. Talbert, Leanne Hanson & Chris Holmquist-Johnson,  
*Fort Collins Science Center, Fort Collins CO*

# Tool to Support Management

- Evaluate how different flow scenarios affect instream habitat for biota
- Incorporate a suite of taxa
- User-friendly, updateable, etc.

Dwarf wedgemussel

American eel

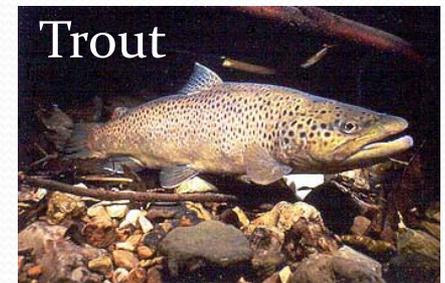

River otters

## Bovee et al. 2007

### A Decision Support Framework for Water Management in the Upper Delaware River

By Ken D. Bovee, Terry J. Waddle, John Bartholow, and Lucy Burris

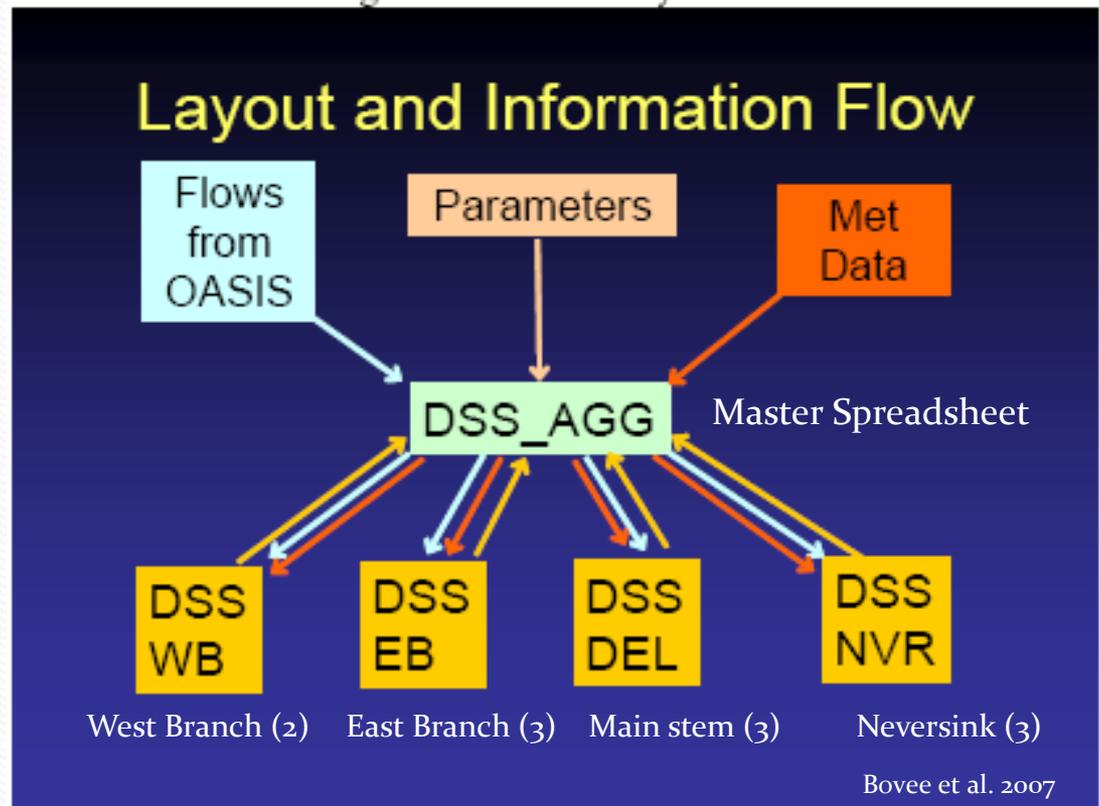

Open-File Report 2007-1172

U.S. Department of the Interior  
U.S. Geological Survey

# Current Decision Support System

- 11 reaches
- 4 species
- 2 fish guilds
- Integrates:
  - OASIS estimates
  - Temperature
  - User defined parameters
  - Habitat curves

# Current Decision Support System

- Platform: Excel
- Output:
  - Summary stats available by flow scenario

Resource	West Branch				East Branch			
	Pct Chg	Δ Hab	Pct Chg	ΔTCondHab	Pct Chg	Δ Hab	Pct Chg	ΔTCondHab
Trout Adult, ha	21%	13.50			8%	12.31		
Trout Spawning/incu, ha	91%	2.39			3%	0.10		
SSCV, ha	8%	1.11			-9%	-2.54		
SFOV, ha	52%	2.44			41%	1.04		
Shad Juvenile, ha								
Shad Spawning, ha								
Dwarf Wedge Mussel, ha								
Spills, minor, count	-6%	-1.00			14%	1.00		
Spills, moderate, count	13%	2.00			15%	2.00		
Spills, major, count	-13%	-2.00			-14%	-4.00		

Resource	West Branch				East Branch			
	Pct Chg	Δ Hab	Pct Chg	ΔTCondHab	Pct Chg	Δ Hab	Pct Chg	ΔTCondHab
Trout Adult, ha	16%	11.47	16%	11.41	4%	6.77	4%	6.84
Trout Spawning/incu, ha								
SSCV, ha	2%	0.24	2%	0.24	-4%	-0.84	-3%	-0.77
SFOV, ha	11%	0.40	11%	0.40	8%	0.24	8%	0.24
Shad Juvenile, ha								
Shad Spawning, ha					16%	5.50	16%	5.50
Dwarf Wedge Mussel, ha								
Spills, minor, count	0%	0.00			14%	1.00		
Spills, moderate, count	0%	0.00			-21%	-8.00		
Spills, major, count	0%	0.00			-5%	-2.00		

**Figure 11.** Expanded view of the scoring summary page, showing details of the scores and metrics for biological resources and spills in the DRDSS.

# Improving Management of Ecological Water Needs - **Objectives**

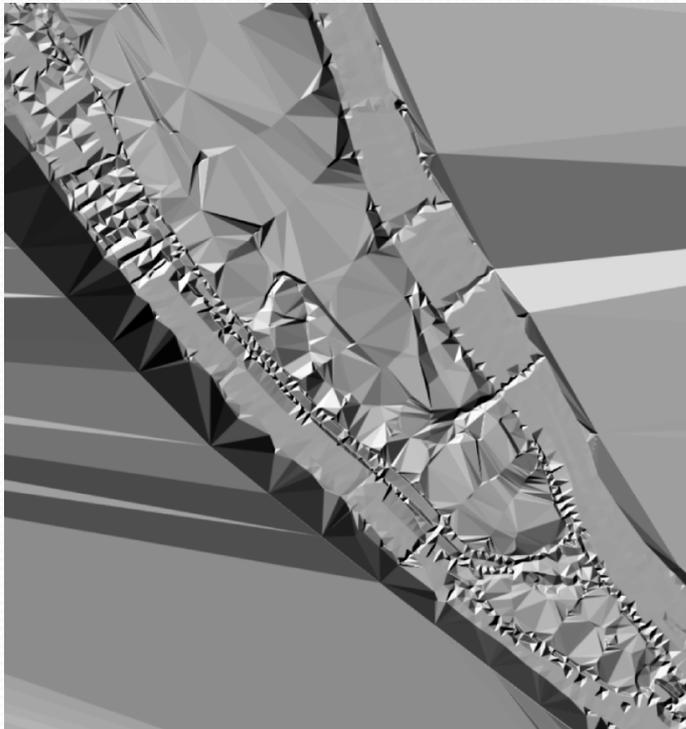

- Add 2010 hydrodynamic modeling data for three main stem reaches & extend time coverage
- Update habitat suitability criteria for biota and include additional species
- Extend meteorological data and test temperature model
- Develop an improved DSS platform
- Extend coverage – from dams to Trenton NJ

# Improving Management of Ecological Water Needs - **Objectives**

- Add 2010 hydrodynamic modeling data for three main stem reaches & extend time coverage
- Update habitat suitability criteria for biota and include additional species
- Extend meteorological data and test temperature model
- Develop an improved DSS platform
- Extend coverage – from dams to Trenton NJ

# 2010 data

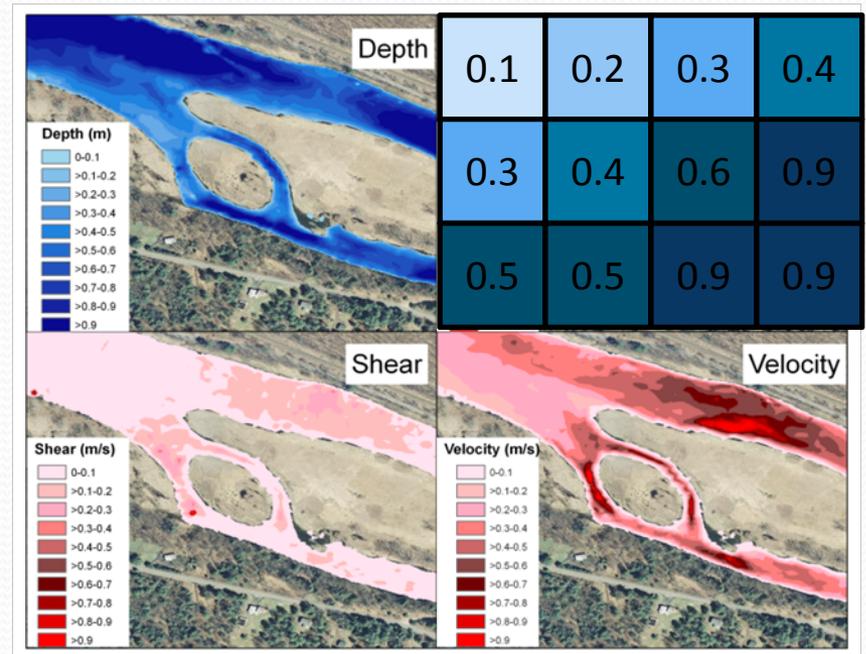

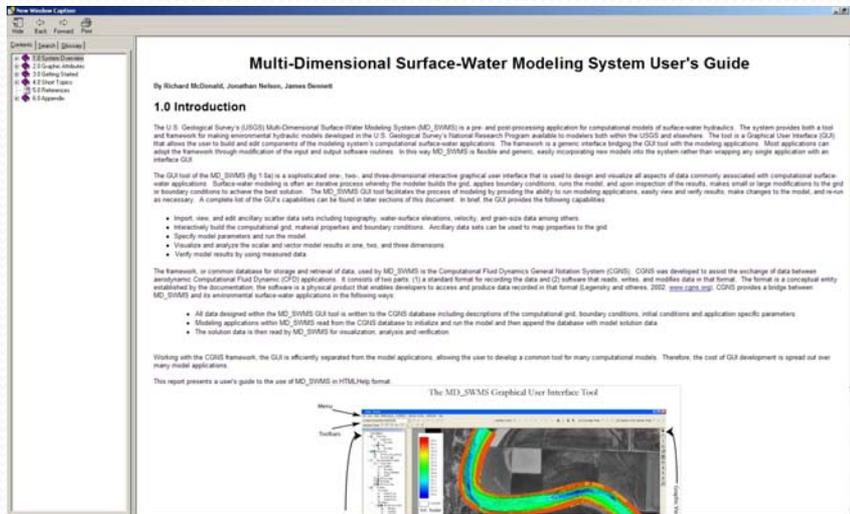

- 2010 high resolution bathymetry – 3 main stem reaches

# 2010 data

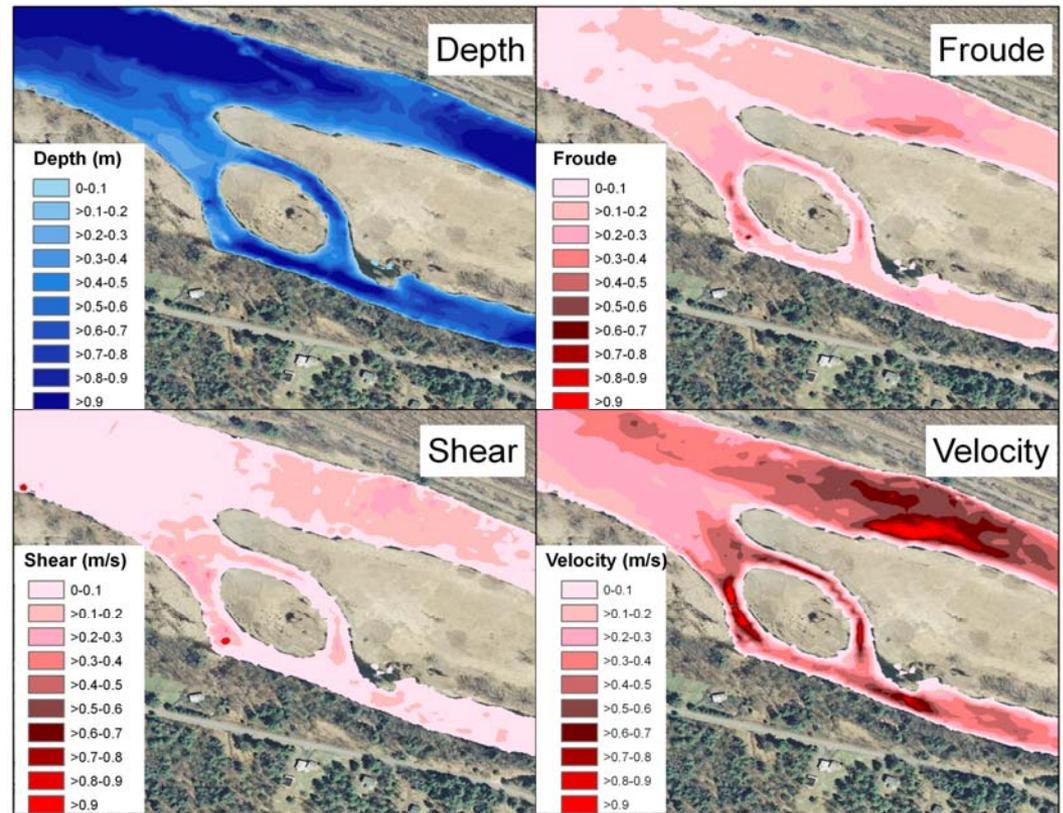

## 2-D hydrodynamic models

## Pixel-scale output

# 2010 data

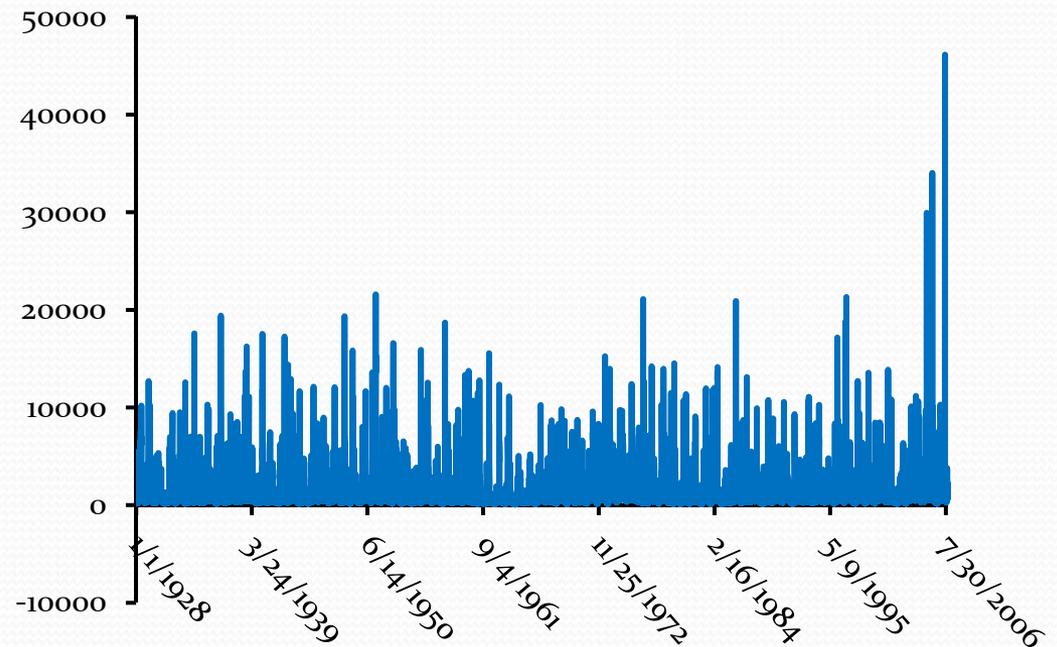

- Better hydrodynamic model estimates for sedentary taxa/life stages

# Extend time coverage of DSS

- Incorporate OASIS model outputs over range of time (1928 – 2006)
- Add FFMP

OASIS estimate at Callicoon, NY

# Improving Management of Ecological Water Needs - **Objectives**

- Add 2010 hydrodynamic modeling data for three main stem reaches & extend time coverage
- Update habitat suitability criteria for biota and include additional species
- Extend meteorological data and test temperature model
- Develop an improved DSS platform
- Extend coverage – from dams to Trenton NJ

# Revised Habitat Suitability Curves (HSC)

- Bovee et al. 2007: Delphi technique
  - Questionnaire to experts

Suitable depth and velocity ranges for target organisms, as defined by the Delphi panel.

	Target Organism	Depth Range (m)	Velocity Range (m/s)	Temperature
	Brown trout adult	0.3–100 <sup>1</sup>	0.0–1.0	
	Brown trout juvenile	0.2–0.8	0.0–0.7	
	Brown trout spawning	0.2–0.6	0.3–0.81	
	Brown trout incubation	0.2–1.0	0.15–1.2	
	Rainbow trout adult	0.3–100 <sup>1</sup>	0.0–1.2	
	Rainbow trout juvenile	0.2–1.0	0.0–0.8	
	American shad spawning	0.3–3.0	0.2–0.7	
	American shad juvenile	0.25–1.6	0.0–0.6	
	Shallow-fast guild	0.05–0.3	0.3–1.2	
	Shallow-slow guild <sup>2</sup>	0.05–0.3	0.0–0.3	

- USGS NARL approach: Literature review
  - Other species? (e.g., American eel, bridal shiner, sea lamprey, etc.)

# Literature Review methods

- Use defined “key search terms” in several major search engines
  - *E.g.*, ISI Web of Knowledge, Google Scholar, USGS Digital Desktop Library
- Primary literature (no grey literature)
- Preference: articles reporting fish density AND environmental variables (depth, velocity, temperature)
- Second: articles reporting average environmental variables where fish present (no density data)

# Example: Rainbow Trout

- Search Engine = Web of Knowledge
  - Topic = *Oncorhynchus mykiss*
  - Topic = Depth
    - 188 Results
      - Reviewed 56 Articles
      - Used ~20

1. Title: **Archival and acoustic tags reveal the post-spawning migrations, diving behavior, and thermal habitat of hatchery-origin Sacramento River steelhead kelts (*Oncorhynchus mykiss*)**  
Author(s): Teo, Steven L. H.; Sandstrom, Phil T.; Chapman, Eric D.; et al.  
Source: ENVIRONMENTAL BIOLOGY OF FISHES Volume: 96 Issue: 2-3 Pages: 175-187 DOI: 10.1007/s10641-011-9938-4 Published: FEB 2013  
Times Cited: 3 (from All Databases)  
[Find It @ USGS](#) [ [View abstract](#) ]
2. Title: **Deep RNA Sequencing of the Skeletal Muscle Transcriptome in Swimming Fish**  
Author(s): Palstra, Arjan P.; Beltran, Sergi; Burgerhout, Erik; et al.  
Source: PLOS ONE Volume: 8 Issue: 1 Article Number: e53171 DOI: 10.1371/journal.pone.0053171 Published: JAN 8 2013  
Times Cited: 0 (from All Databases)  
[Find It @ USGS](#) [ [View abstract](#) ]
3. Title: **A hydrodynamic investigation of brown trout (*Salmo trutta*) and rainbow trout (*Oncorhynchus mykiss*) redd selection at the riffle scale**  
Author(s): Marchildon, M. A.; Annable, W. K.; Power, M.; et al.  
Source: RIVER RESEARCH AND APPLICATIONS Volume: 28 Issue: 5 Pages: 659-673 DOI: 10.1002/rra.1478 Published: JUN 2012  
Times Cited: 0 (from All Databases)  
[Find It @ USGS](#) [ [View abstract](#) ]

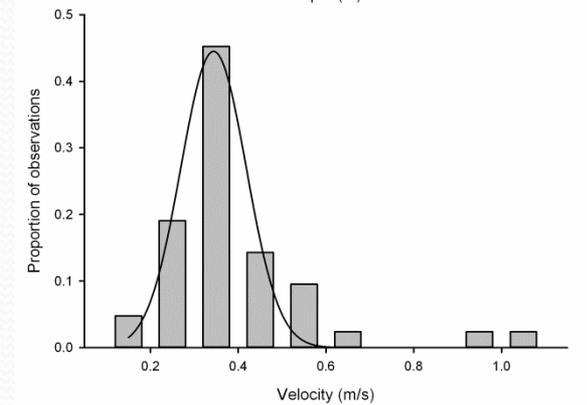

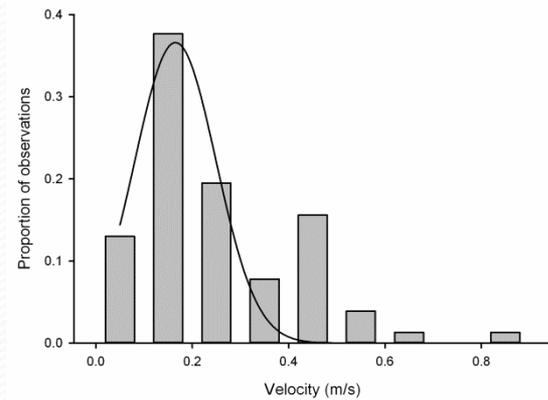

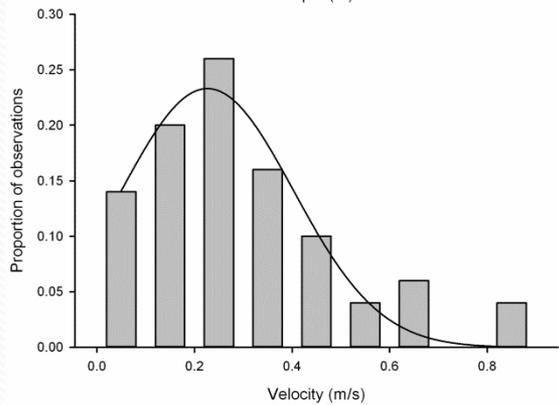

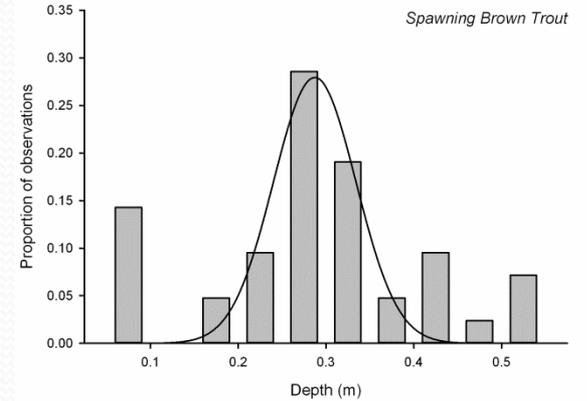

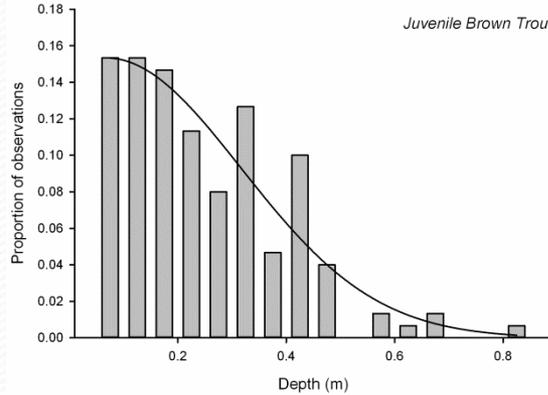

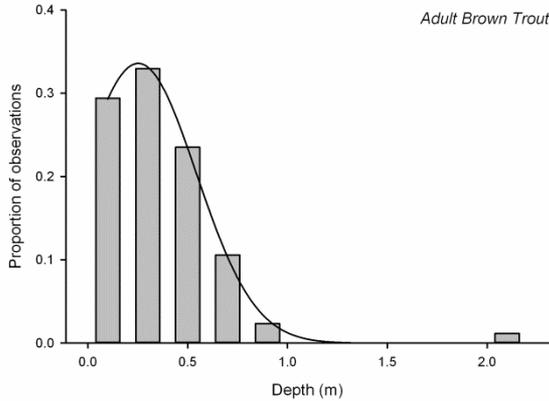

- Similar for each additional search engine
- Other search terms: habitat suitability, rainbow trout, flow, etc.

# Current progress on trout

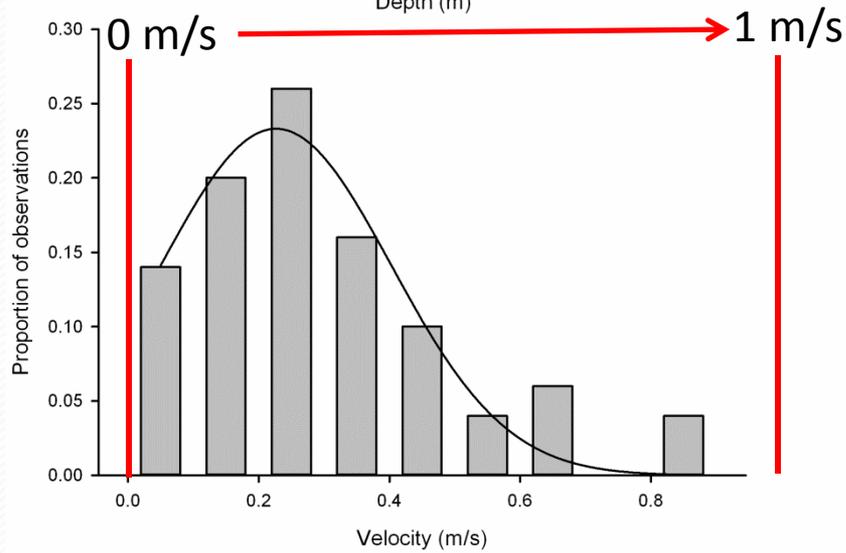

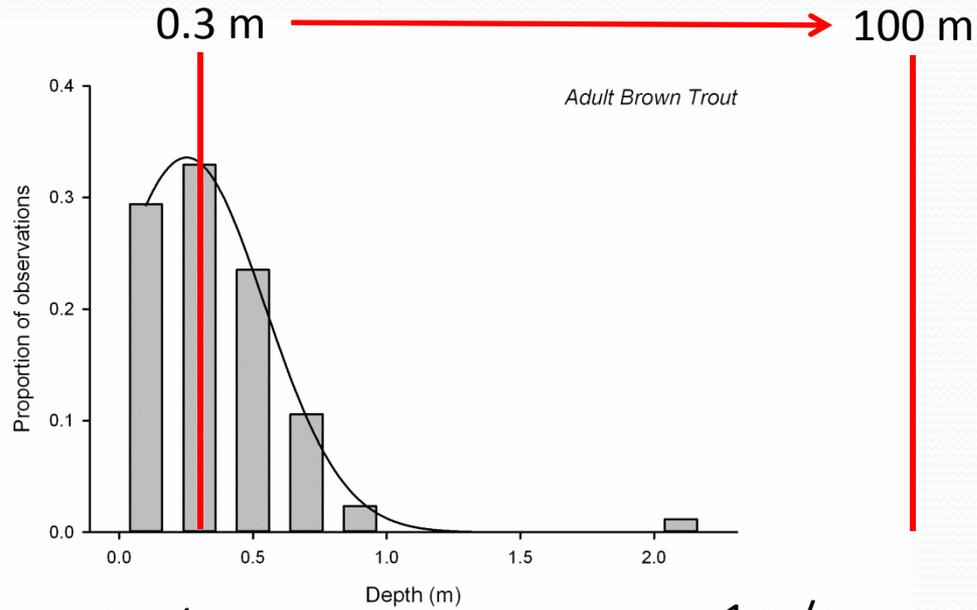

- Brown Trout (depth and velocity)
  - Adult, juvenile, spawning
  - Total Number of Articles = 33; 309 observations
    - 20 from Studies Conducted in Europe
    - 12 from Studies Conducted in North America
    - 1 from Studies Conducted in Australia
- Rainbow Trout (depth and velocity)
  - Adult, juvenile
  - Total Number of Articles = 29; 89 observations
    - 1 from Studies Conducted in Europe
    - 27 from Studies Conducted in North America
    - 1 from Studies Conducted in Asia

# Brown trout HSC

# NARL curves vs. Bovee et al. 2007

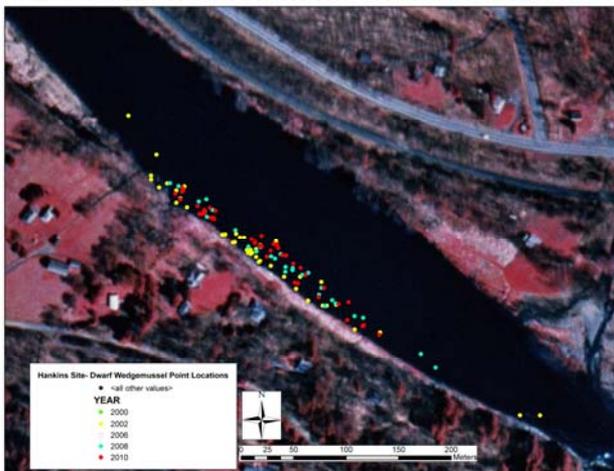

# Dwarf wedgemussel

- Limited published literature on habitat use of mussels in general
- Used USGS NARL field, laboratory, and modeling data to build HSC – idea of **Persistent Habitat**

Field measurements  
2007-2009

Delaware mainstem & tribs

Depth preference studies, NARL

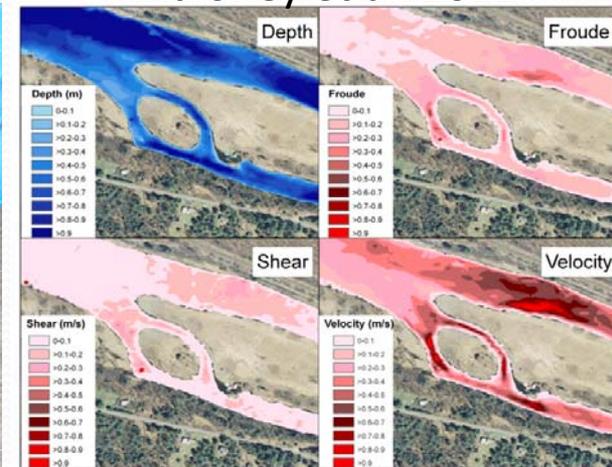

2010-2011

Delaware tribs

Hydrodynamic modeling results

Maloney et al. 2012

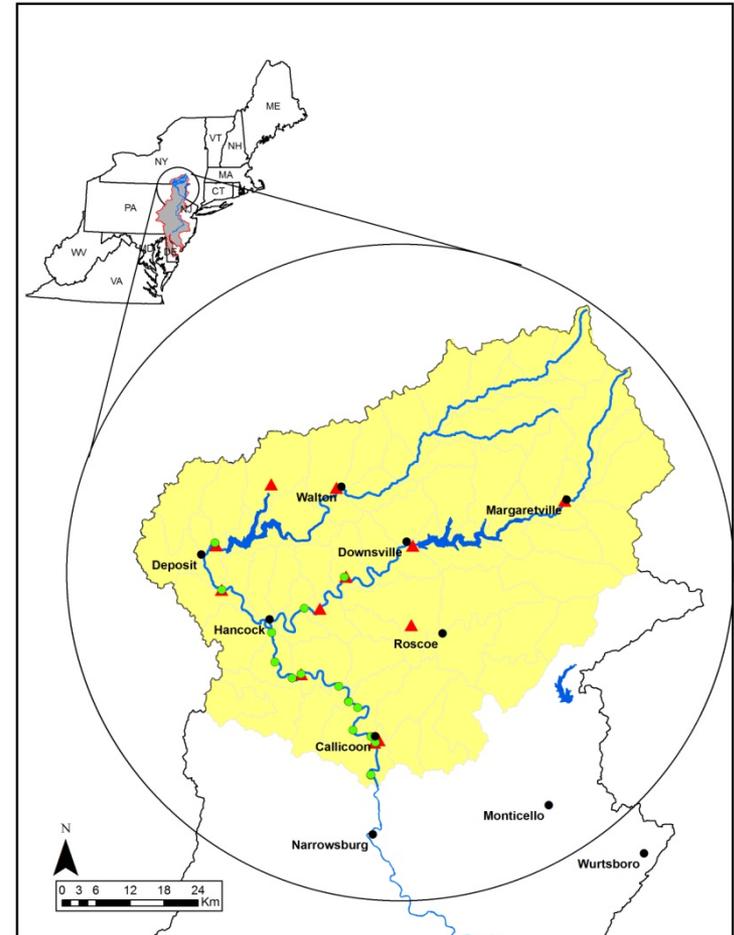

# Improving Management of Ecological Water Needs - **Objectives**

- Add 2010 hydrodynamic modeling data for three main stem reaches & extend time coverage
- Update habitat suitability criteria for biota and include additional species
- Extend meteorological data and test temperature model
- Develop an improved DSS platform
- Extend coverage – from dams to Trenton NJ

# Climate Data & Temperature Model

- Extend meteorological data
  - Currently used station limited to 1994
  - Timeline to match OASIS
  - Use other stations to extend by proxy
  
- Test temperature model
  - SNTMP and Multivariate models
  - Construct models with part of data, test with recent data
  - Deploy additional temp loggers
  
- **NEED:** Reservoir release amounts and temperatures, spillover estimates

# Improving Management of Ecological Water Needs - **Objectives**

- Add 2010 hydrodynamic modeling data for three main stem reaches & extend time coverage
- Update habitat suitability criteria for biota and include additional species
- Extend meteorological data and test temperature model
- **Develop an improved DSS platform**
- Extend coverage – from dams to Trenton NJ

# Improved DSS Platform - History

- Original Delaware DSS (Excel)

- SMART River (Trinity River)

- Yakima River DSS (hard coded)

- Revised Delaware DSS (User Friendly, spatially referenced GUI)

# Improved DSS Platform

## Key Features:

- User friendly, transferable GUI
- Enables user to manually modify the habitat suitability criteria/curves
- Spatial representation of input data (e.g., hydrodynamic variables) and calculated available habitat)
- Allows user to select time period of interest

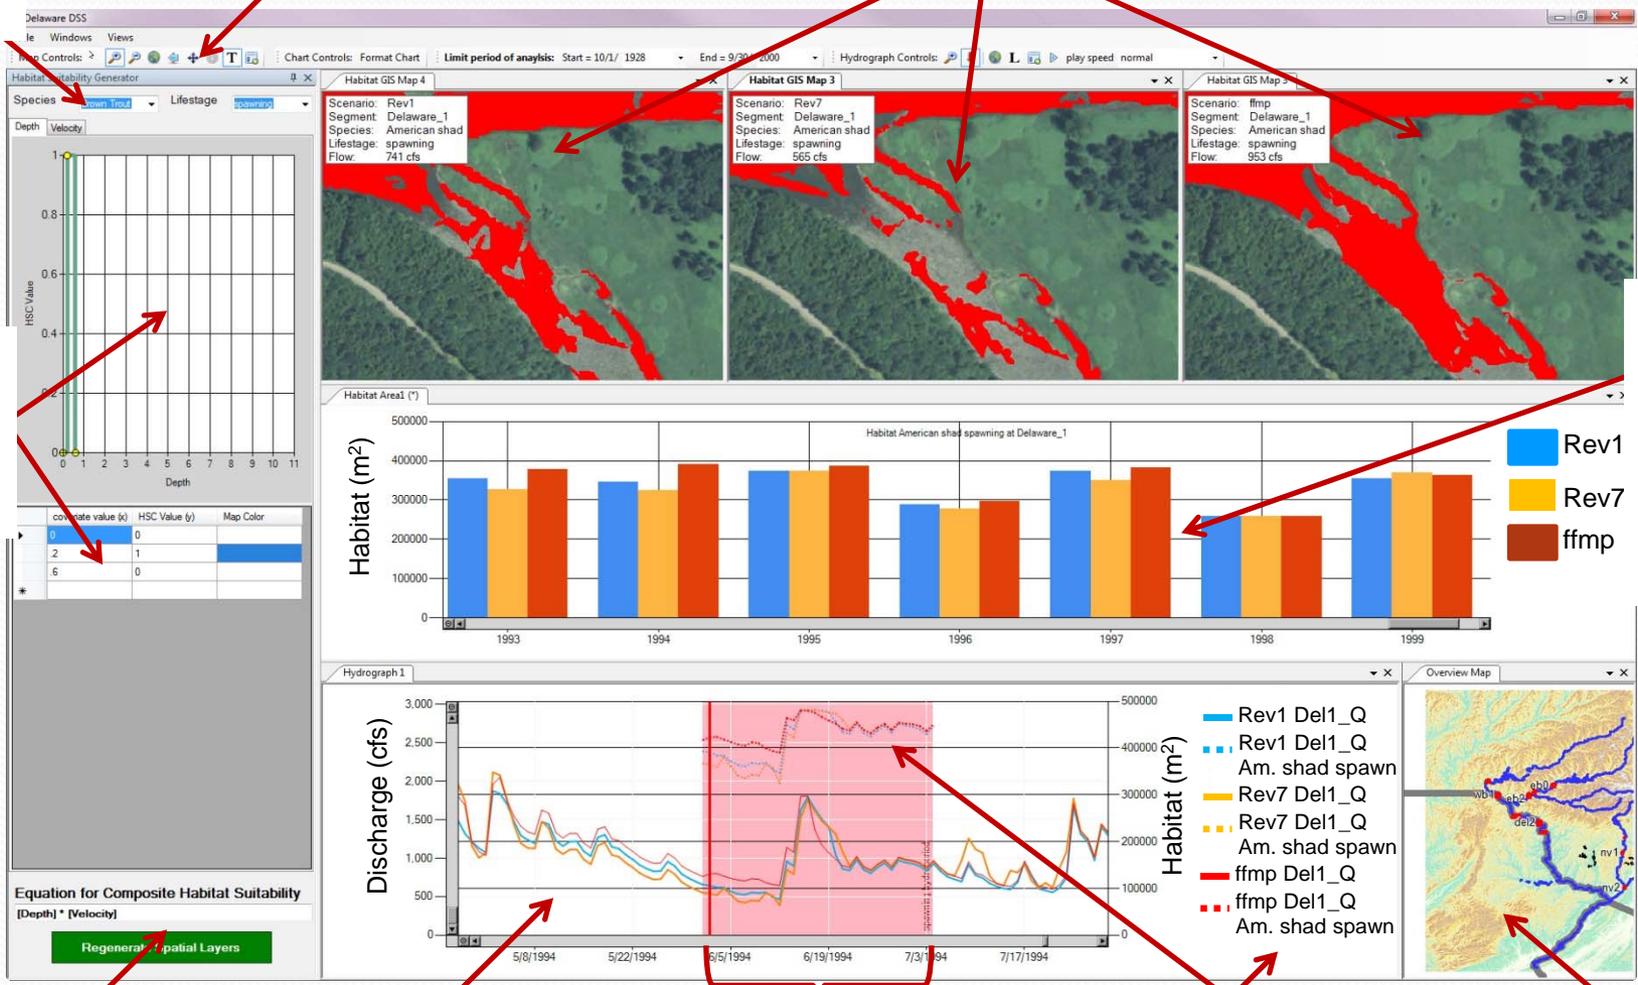

Geographic Information System (GIS) functionality

Color coded habitat maps for each scenario

Selection of key species

Habitat suitability criteria can be modified

Daily average amount of available habitat over period of interest

Equation for displayed habitat suitability maps

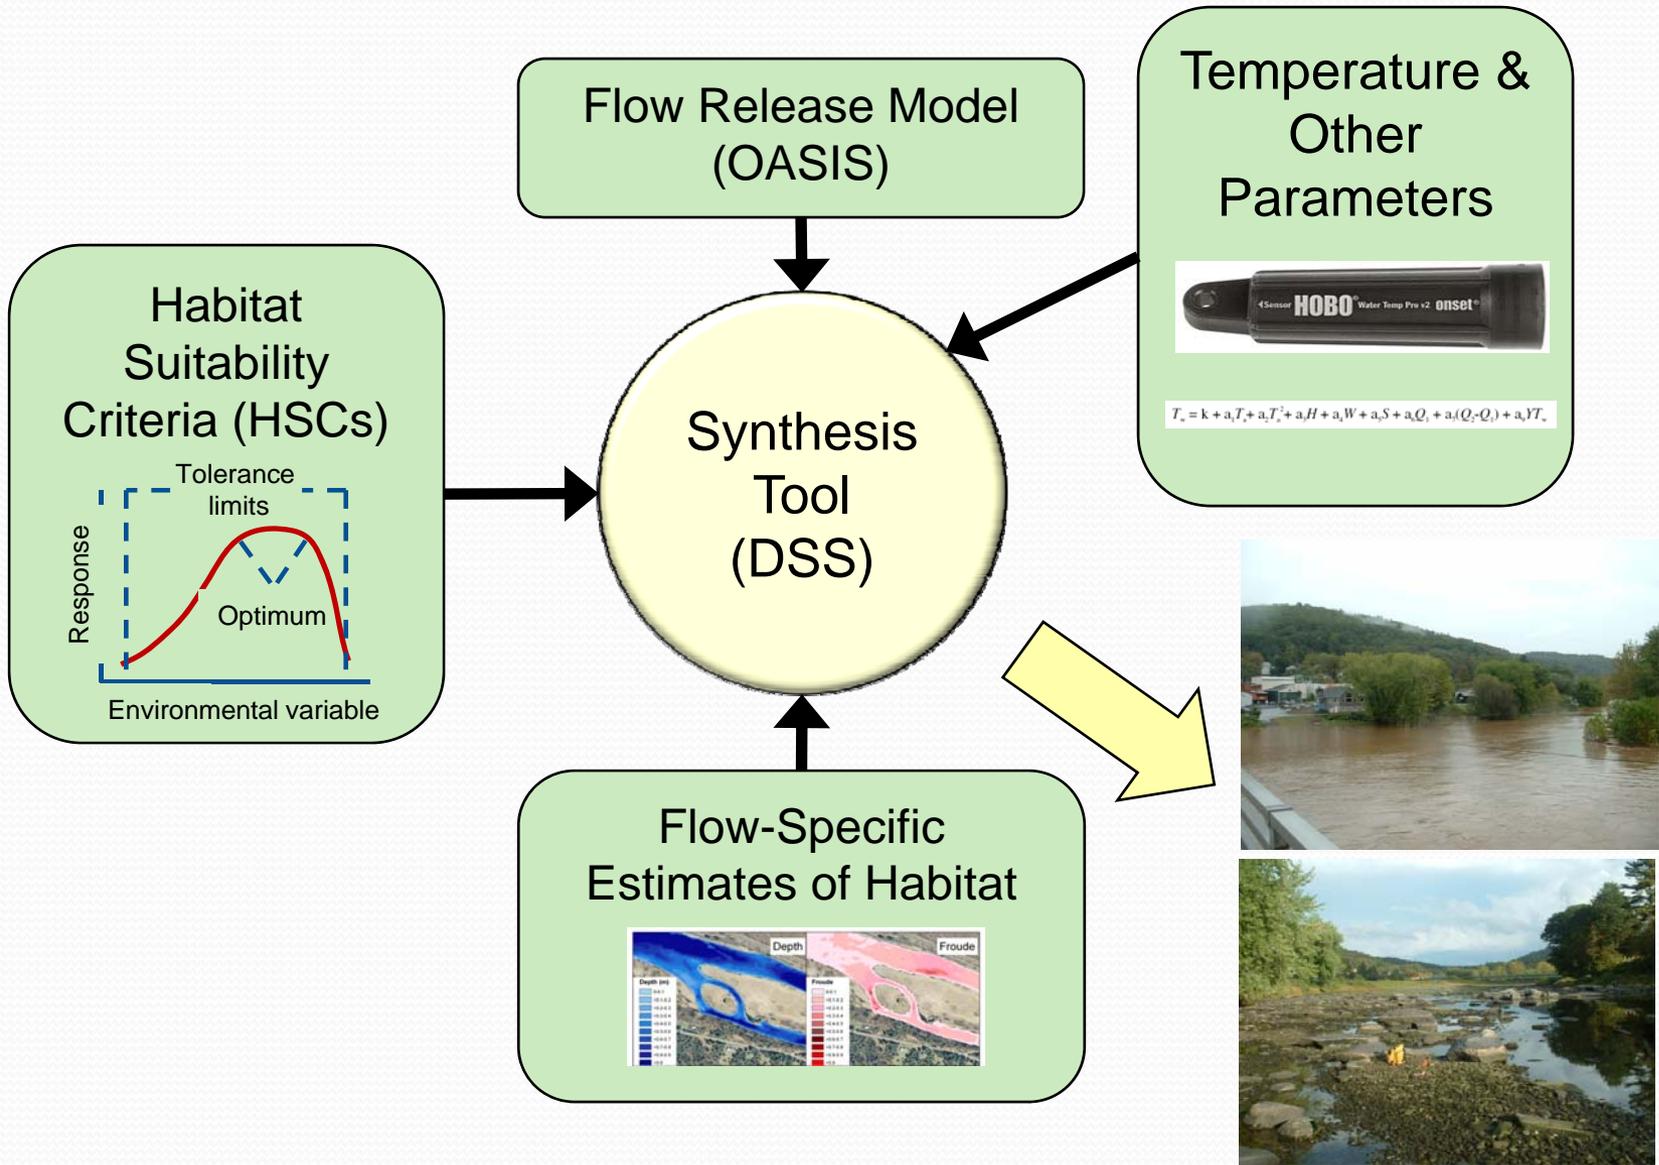

Display of hydrograph for all scenarios

Hydroperiod of interest

Amount of available habitat by scenario by date

Map of site location

# Putting it all Together

# Where do we Stand?

- Automate data import from OASIS (2012)
- Extend temporal coverage of DSS and add 2010 hydrodynamic modeling data (2012)
- Develop a more user-friendly, transferable DSS platform (beta version Jan 2013)
- Revise and incorporate revised habitat suitability criteria (ongoing, 2013/14)
- Add persistent habitat metric to DSS (2013/14)
- Test temperature model and add to DSS (2013/14???)
- **Workshop on DSS – mid-April in conjunction with SEF meeting**

# Thank you

**Upcoming possible “hands on” demonstration of the DSS  
in 2013**
