- New Jersey can and should be a global leader in addressing our climate emergency. Instead, I am alarmed by the findings presented in the Integrated Energy Plan. I demand you take all steps to address these critical structural deficiencies before finalizing the IEP and EMP. Improvements to the IEP should include:
  - any modeling scenarios that cut NJ's emissions 45% before 2030 as recommended by IPCC 2018 report
  - modeling for a goal of carbon-free energy for New Jersey
  - modeling for immediate moratorium on any new fossil fuel infrastructure
  - front loading emission reductions to have the most significant impact on our climate emergency
  - accurately estimating the global warming potential of short-lived climate pollutants like methane and black carbon
  - counting social costs of continued reliance and use of fossil fuels
  - flexibility to use the best of some plans now and others later
  - valuing meaningful public input
  - consideration of potential impact of future regulatory and technological changes
  - any mechanisms or recommendations of how to decrease fossil fuel use
