New Jersey can and should be a global leader in addressing our climate emergency. Instead, I am alarmed by the findings presented in the Integrated Energy Plan. I demand you take all steps to address these critical structural deficiencies before finalizing the IEP and EMP. Improvements to the IEP should include:

- **any modeling scenarios that cut NJ's emissions 45% before 2030 as recommended by IPCC 2018 report**
- **modeling for a goal of carbon-free energy for New Jersey**
- **modeling for immediate moratorium on any new fossil fuel infrastructure**
- **front loading emission reductions to have the most significant impact on our climate emergency**
- **accurately estimating the global warming potential of short-lived climate pollutants like methane and black carbon**
- **counting social costs of continued reliance and use of fossil fuels**
- **flexibility to use the best of some plans now and others later**
- **valuing meaningful public input**
- **consideration of potential impact of future regulatory and technological changes**
- **any mechanisms or recommendations of how to decrease fossil fuel use**
