Subject: [EXTERNAL] current fossil fuel program
Date: Sunday, September 15, 2019 1:04:38 PM

Plz,

In this day of rampant climate change, what makes sense for the citizens of NJ is a master plan to curtail fossil fuels and to cultivate new and promote clean and renewable sources of energy. A timeline to bring us up to the rest of the world in planning. Eradicate coal and fossil fuel over the next 50 years. More tax breaks for hybrid cars and less for Oil & coal companies. It is so embarrassing that China is mocking us with all their innovations while we keep tripping over with climate change denials.

It is ridiculous to reward energy companies for backward thinking putting in pipelines where they are not wanted or needed all the energy of that should be invested in new forms of energy. Modern windmills, solar and new forms of energy. For heaven s sake why can't you ensure that the electricity grid is not compromised with every other thunderstorm, please start to bury the power lines. What are you doing about that? That is much better starting point than Penneast!

Thanks
Sincerely
Shirah Gray
