Data Sources:

Note: Women includes females 13 years of age and older. Racial categories do not include Hispanic.
Women account for about one-third of the adult/adolescent HIV/AIDS diagnoses in New Jersey.

Among the 50 States, New Jersey has one of the highest proportion of females among persons living with AIDS.

One in 304 women in New Jersey is living with HIV/AIDS.

Most women (64%) living with HIV/AIDS were exposed by heterosexual transmission.

86% of new diagnoses among women occurred in minorities.

63% of women exposed through heterosexual contact in 2006 had contact with partners of unknown HIV risk.

Of women reported with HIV/AIDS in 2009, 49% were age 40 and over; 9% were under 25.

The rate of HIV/AIDS diagnosis among African American women was 23 times higher than the rate among non-Hispanic White women from 2005-2006.

23% of all infected women exposed through heterosexual contact were reported as partners of injection drug users.
