What is asthma?

- Asthma is a serious and chronic disease that is marked by swelling in the airways.
- Symptoms of asthma include shortness of breath, coughing, wheezing and chest tightness.
- Uncontrolled asthma can lead to emergency department visits, hospitalization and even death.
- Symptoms can be triggered by dust mites, smoke, roaches, rodents, pets, mold, mildew, and strong odors.

Why is asthma an important health issue for women?¹

- In New Jersey, the number of women with asthma is almost double the number of men.
- Almost 10% of women in New Jersey currently have asthma.
- Women are more likely to visit the emergency department for asthma.
- Women are more likely to be hospitalized for asthma.
- Women have longer hospital stays for asthma.
- Death rates for asthma are higher among women.
- Symptoms worsen during pregnancy for about 30% of women with mild asthma.²
- Uncontrolled asthma can cause serious health problems for pregnant women and their unborn children.²

What can women do to control their asthma?

- To help you control your asthma, ask your doctor to complete an Asthma Action Plan. For more information, contact the Pediatric Adult Asthma Coalition of New Jersey (PACNJ) at 866-PACNJ-88 or visit http://www.pacnj.org/ to download the form in English or Spanish.
- Learn how to avoid asthma triggers, recognize early symptoms, and take action when symptoms start. For more information, contact PACNJ at 866-PACNJ-88 or visit http://www.pacnj.org/.
- See your doctor as instructed even if you are feeling well.
- Smoking can make your asthma worse. Contact New Jersey Quitnet at 1-866-NJSTOPS or http://www.nj.quitnet.com/ for information about how to quit.
- People with asthma are more likely to have complications from the flu. Talk with your doctor about getting a flu shot every year.
**What can women do if they are pregnant or thinking of getting pregnant?**

- Talk with your doctor early on about how to manage your asthma during pregnancy.
- Talk with your doctor about any changes in your asthma symptoms during pregnancy.
- Avoid triggers that make your asthma worse.
- Health conditions like allergies and reflux can affect your symptoms. Talk with your doctor early on about how to manage other conditions that might change your asthma.
