A 45-year-old vehicle detailing company manager died after spraying a diisocyanate-based truck bed liner inside a van. The cause of death was an acute asthmatic reaction due to chemical exposure.

Exposure to diisocyanates can cause:
- Lung and eye irritation
- Work-related asthma
- Other lung diseases
- Allergic dermatitis
- Death

Protect yourself

- Work in a well-ventilated room or spray booth
- Wear a supplied-air, full-face respirator after you have received training and medical approval
- Get Material Safety Data Sheets (MSDS) for polyurethane products and follow safety precautions
- Protect your skin and eyes from contact with diisocyanate-based materials

Questions? See contact information below.
The New Jersey Department of Health & Senior Services, in conjunction with the National Institute for Occupational Safety and Health, is currently conducting a research study of work-related asthma. This project seeks to identify the factors that contribute to work-related asthma and provides recommendations for controlling workplace exposures associated with work-related asthma.
