Dear Reader:

New Jersey is one of the safest states in the nation based on traffic movement data and motor vehicle miles traveled. During the calendar year 2000, there were 655 fatal crashes with 723 fatalities in New Jersey—the fewest number since the New Jersey State Police initiated its motor vehicle traffic data base. A review of fatal crashes for the first six months of calendar year 2001, found a decrease of 6.6% from calendar year 2000.

Notwithstanding the downward trend, two issues have become areas of concern. Motorcycle related crashes and deaths were up significantly over the previous year, and the number of intoxicated drivers in fatal accidents has increased 15%.

The New Jersey State Police takes pride in all of its driver education and traffic enforcement programs. Our unyielding goal is to reduce the number of people killed and injured as a result of motor vehicle collisions and promote a general sense of awareness and safety.

The following booklet was compiled by members of the Fatal Accident Investigation Unit of the New Jersey State Police. It contains motor vehicle traffic accident statistical data for the calendar year 2000. Working toward the goal of reducing the number of fatal and serious accidents is paramount and it is my sincerest desire that the number of traffic related deaths continues its downward trend.

Sincerely,

A handwritten signature in cursive script that reads "Carson J. Dunbar, Jr.".

Of this total, 578 were tested for alcohol and 145 were not tested. Of the 578 tested, 209 were positive for alcohol in varying degrees and 341 were negative. This indicates that 36.1% of the fatalities tested were positive for alcohol and 58.9% were negative. Twenty one drivers, three passengers, six pedestrians, and one pedalcyclist tested positive for drugs.

In 152 of the 655 accidents, Driving While Intoxicated was listed as the major contributing factor (includes 1 “drunken bicyclists”). There were 180 people killed as a result of these 152 accidents.

Of the 133 imbibing drivers, 100 or 75.1% had an alcohol level of .10% or higher. Twenty one deceased drivers tested positive for drugs. Note: Three deceased drivers tested positive for both alcohol and drugs and are counted in both totals.

Surviving: There were a total of 674 surviving drivers of which 211 were tested. Of those, 50 were positive and 166 were negative, indicating 23.7% had consumed an alcoholic beverage. Of the 50 imbibing drivers, 31 or 62.0% had an alcohol level of .10% or higher. Eight surviving drivers tested positive for drugs.
- 2.) **Passengers:** There were a total of 151 passengers killed of which 107 were tested. Of those tested, 29 were positive and 75 negative, indicating 27.1% had consumed an alcoholic beverage. Three passengers tested positive for drugs.

The number of fatal accident victims with blood alcohol readings above .10% increased from 134 in 1999 to 153 in 2000, an increase of 14.1%. Deceased drivers with alcohol involvement showed a 30.3% increase when compared to 1999. Of those drivers tested in each category, deceased drivers showed an increase of 35.1% and surviving drivers showed a decrease of 2.2% in the .10% and over category.
