

FACT SHEET

Revision to NJDEP Division of Air Quality Risk Screening Worksheet for Carcinogenic Effects and Noncarcinogenic Long-Term and Short-Term Effects (Worksheet) as Listed in Technical Manual 1003 “Guidance on Preparing a Risk Assessment for Air Contaminant Emissions”

NOTE: The final revised Worksheet is available on the Department’s website at <https://www.state.nj.us/dep/aqpp/risk.html>. This Worksheet is an optional tool that regulated facilities can use to demonstrate negligible risk without conducting a refined risk assessment, pursuant to N.J.A.C. 7:27-8.5, for Preconstruction Permits, and N.J.A.C. 7:27-22.8, for Operating Permits. Facilities may choose to initially determine health risks with a refined risk assessment and not use the Worksheet.

The following outlines the changes to the final revised Worksheet along with background information used to support the change:

1. The minimum stack height for sources to use the Worksheet has been raised from 10 feet to 15 feet.

The Department concluded that source operations with stack heights less than 15 feet should not use the Worksheet and should have their potential health risks evaluated on a case-by-case basis. Stack heights less than 15 feet do not provide sufficient dispersion and, therefore, would require refined risk assessment.

The change to the stack height restriction should not significantly impact the average time and resources needed to obtain an Air Pollution Control Permit as most stacks are already above 15 feet tall.

2. Sulfuryl fluoride (SF) has not been added to the Worksheet.

Based on comments received, the acute and chronic sulfuryl fluoride reference concentrations proposed in the draft Worksheet have been removed. Reference concentrations for sulfuryl fluoride will be proposed for public review and comment after the Department reviews California Environmental Protection Agency’s research findings, which are scheduled to be issued by early 2021, as well as any additional information and data published by recognized government or academic entities.

3. Carbonyl Sulfide has been added to the Worksheet with the following reference concentrations: Averaging time of 24 hours 660 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$); and Long-term or chronic 10 $\mu\text{g}/\text{m}^3$.

Although carbonyl sulfide had been designated as a hazardous air pollutant (HAP) by the

USEPA and is listed in N.J.A.C. 7:27-17 “Control and Prohibition of Air Pollution by Toxic Substances and Hazardous Air Pollutants,” it was not previously included in the Worksheet due to a lack of published toxicity values. Health impacts associated with carbonyl sulfide include developmental impairments to organs and neurological/nervous system impairment. CalEPA issued the Reference Concentrations for carbonyl sulfide on February 21, 2017.

4. 1-bromopropane (n-propyl bromide or nPB) has been added to the Worksheet with the following reference concentrations: Averaging time of 24 hours 5,030 micrograms per cubic meter ($\mu\text{g}/\text{m}^3$); and Long-term or chronic 101 $\mu\text{g}/\text{m}^3$.

Based on the nPB’s high toxicity and its potential for significant use in dry cleaning and other commercial operations and to ease the burden on facilities which use the compound, nPB has been added to the Worksheet.

The Agency for Toxic Substances and Disease Registry (ATSDR), which is part of the U.S. Department of Health and Human Services, issued Reference Concentrations for short- and long-term non-carcinogenic health impacts in August 2017. The ATSDR’s website is <https://www.atsdr.cdc.gov/>. nPB exposure can cause neurological and nervous system disorders. Health studies also show that nPB emissions can result in reproductive and developmental effects and carcinogenicity. Although nPB is not listed by the USEPA as a HAP, there are numerous government studies, and academic and clinical reports that demonstrate that nPB potential health impacts should be evaluated when a facility proposes to emit the substance to the ambient air.

Several nPB Unit Risk Factors (URF) for carcinogenic impacts have been developed but have not been finalized. Once a URF has been formally adopted by a recognized source, the Department will propose its inclusion in the Worksheet.

5. Clarification to the URF associated with nickel and nickel containing compounds

Nickel compounds, like nickel refinery dust and nickel subsulfide, are listed in N.J.A.C. 7:27-17.9(b) Table 2 with corresponding reporting thresholds. However, these nickel compounds were not specifically listed in the Worksheet. The Department is clarifying the risk screening of these two nickel compounds by adding their corresponding URFs. An URF of $2.4\text{E}-04$ ($\mu\text{g}/\text{m}^3$)⁻¹ is listed for nickel refinery dust and an URF of $4.8\text{E}-04$ ($\mu\text{g}/\text{m}^3$)⁻¹ is listed for nickel subsulfide. The nickel and compounds listed URF in the spreadsheet changed to $4.8\text{E}-04$ ($\mu\text{g}/\text{m}^3$)⁻¹, which is the most stringent listed URF for any nickel compound.

6. “Toxicity Values for Inhalation Exposures” updates

The following table “Revised Toxicity Values” outlines the air toxics whose toxicity values have been revised, type of toxicity value, the previous and revised toxicity values, and the source and issuance date of the revised toxicity values.

Revised Toxicity Values

Air Toxic	Type of toxicity value-*	Toxicity Value		Source, Date Issued by Source, Comment - **
		Previous	Revised	
benzo(a)pyrene	URF	1.1E-03	6.0E-04	IRIS, 1/19/2017, Previous URF value is from CalEPA, No previous RfC value
	RfC	N/A	2.0E-03	
trimethylbenzene-*** (1,2,3), (1,2,4), (1,3,5)	RfC	7.0E+00	6.0E+01	IRIS, 9/9/2016, EPA has stated that toxicity value applies to all isomers, Previous RfC is a USEPA value
ethylene oxide	URF	3.0E-03	5.0E-03	IRIS, 12/16/2016, Applying the age-dependent adjustment factors to obtain a full lifetime total cancer unit risk estimate
1-bromopropane (n-propyl bromide)	RfC	N/A	1.01E+02	ATSDR, 8/2017, Revised RfC _{st} is a 24-hour average, No previous RfC or RfC _{st}
	RfC _{st}	N/A	5.03E+03	
chlordane	RfC	7.0E-01	2.0E-02	ATSDR, 2/2018, Previous RfC is a value from IRIS
glutaraldehyde	RfC _{st}	N/A	4.1E+00	ATSDR, 7/2017, Revised RfC _{st} is a 24-hour average, No previous RfC _{st} value
hydrogen sulfide	RfC _{st}	4.2E+01	9.8E+01	ATSDR, 11/2016, Revised RfC _{st} is a 24-hour average, Previous RfC _{st} is a 1-hour average value from CalEPA
toluene	RfC	5.0E+03	3.76E+03	ATSDR, 6/2017, Previous RfC value is from IRIS Revised RfC _{st} is an ATSDR 24-hour average, Previous RfC _{st} is a 1-hour average value from CalEPA
	RfC _{st}	3.7E+04	7.52E+03	
toluene diisocyanate-*** (2,4- and 2,6-)	RfC	7.0E-02	8.0E-03	CalEPA, 3/28/2016, Previous RfC value is from IRIS, Revised RfC _{st} is a 1-hour average, Previous RfC _{st} is a 1-hour average AEGL value
	RfC _{st}	1.4E+01	2.0E+00	
methylene diphenyl diisocyanate (4,4-)	RfC	6.0E-01	8.0E-02	CalEPA, 3/28/2016, Previous RfC value is from IRIS, Revised RfC _{st} is a 1-hour average, No previous RfC _{st} value
	RfC _{st}	N/A	1.2E+01	

Air Toxic	Type of toxicity value-*	Toxicity Value		Source, Date Issued by Source, Comment - **
		Previous	Revised	
tetrachloroethylene (perchloroethylene)	URF	5.9E-06	6.1E-06	CalEPA, 9/8/2016, Previous URF value is from CalEPA
carbonyl sulfide	RfC RfC _{st}	N/A N/A	1.0E+01 6.6E+02	CalEPA, 2/21/2017, Revised RfC _{st} is a 1-hour average, No Previous RfC or RfC _{st}
ethylene glycol mono-n-butyl ether	RfC RfC _{st}	1.6E+03 1.4E+04	8.2E+01 4.7E+03	CalEPA, 5/4/2018, Previous RfC value is from IRIS, Revised RfC _{st} is a 1-hour average, Previous RfC _{st} is a 1-hour average value from CalEPA
phosphine	RfC _{st}	N/A	7.0E+01	CalEPA, 6/13/2014, Revised RfC _{st} is a 24-hour average, No previous RfC _{st}

- * URF – Unit Risk Factor – (microgram per cubic meter - $\mu\text{g}/\text{m}^3$)⁻¹
RfC – Reference concentration – $\mu\text{g}/\text{m}^3$
RfC_{st} – Reference concentration, short-term – $\mu\text{g}/\text{m}^3$

- ** Cal EPA – California Environmental Protection Agency, Office of Environmental Health Hazard Assessment
IRIS – United States Environmental Protection Agency, Integrated Risk Information System
ATSDR – Agency for Toxic Substances and Disease Registry, U.S. Department of Health and Human Services
AEGL – Acute Exposure Level Guideline

- *** Toxicity values apply to each isomer or a combination of any isomer mixture, whichever is higher
