

Comparison of 2020 Nitrogen Oxides and Fine Particle Concentrations in New Jersey with Data from 2014-2019

The Impact of the “Stay at Home” Directive on Air Quality in New Jersey

NJDEP Bureau of Air Monitoring

5/5/2020

Stay at Home

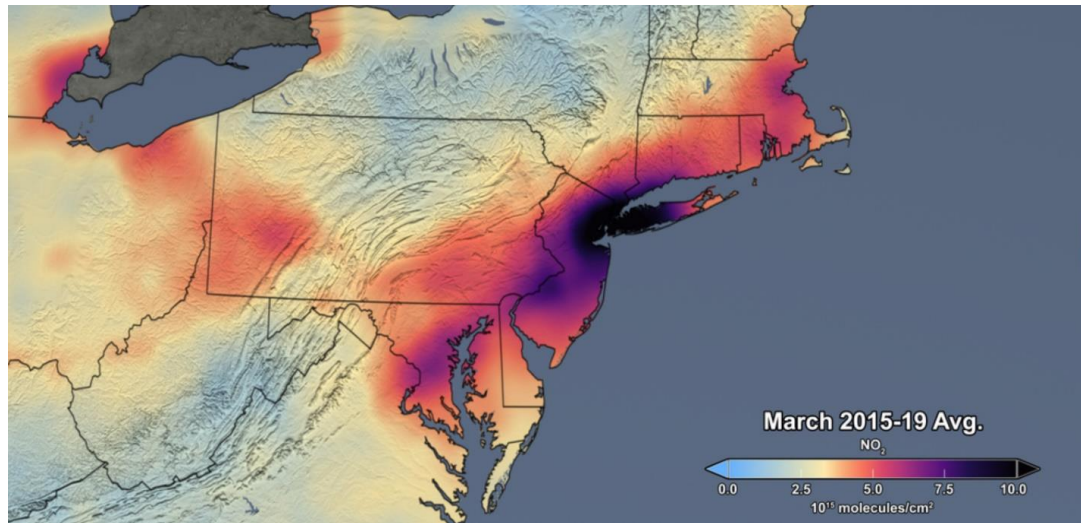

- Office workers work from home.
- All schools and colleges closed; study from home.
- Closure of all non-essential retail businesses
- Closure of all recreational and entertainment businesses.
- All non-essential construction projects must stop.

Results:

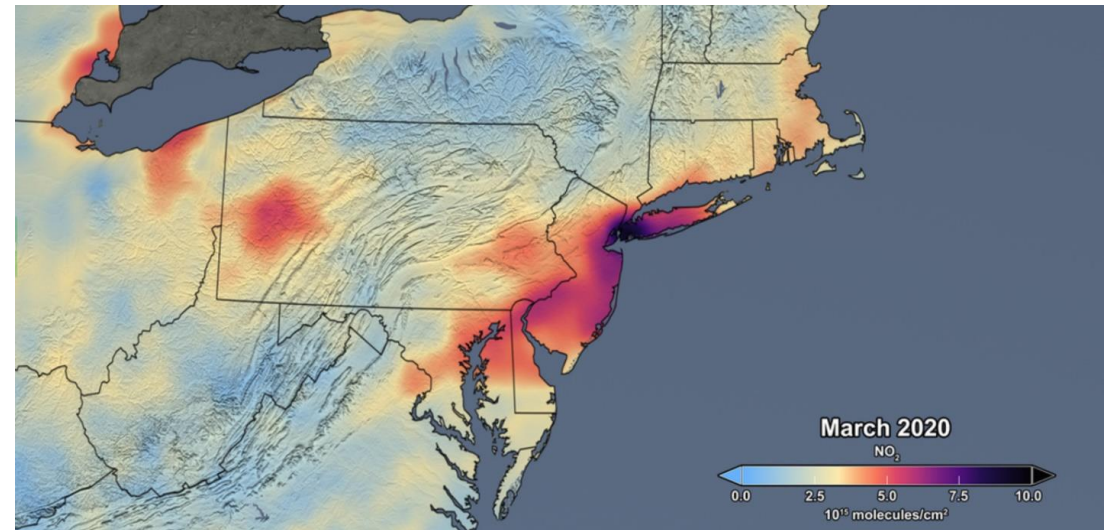

- 38% overall reduction in motor vehicle traffic (a)
- 5%-14% reduction in power use (b,c)

Satellite Images of NO₂ Levels

NO₂ Levels, March 2015-2019

NO₂ Levels, March 2020

News Media Use Satellite Images to Promote Substantial Improvement in Air Quality

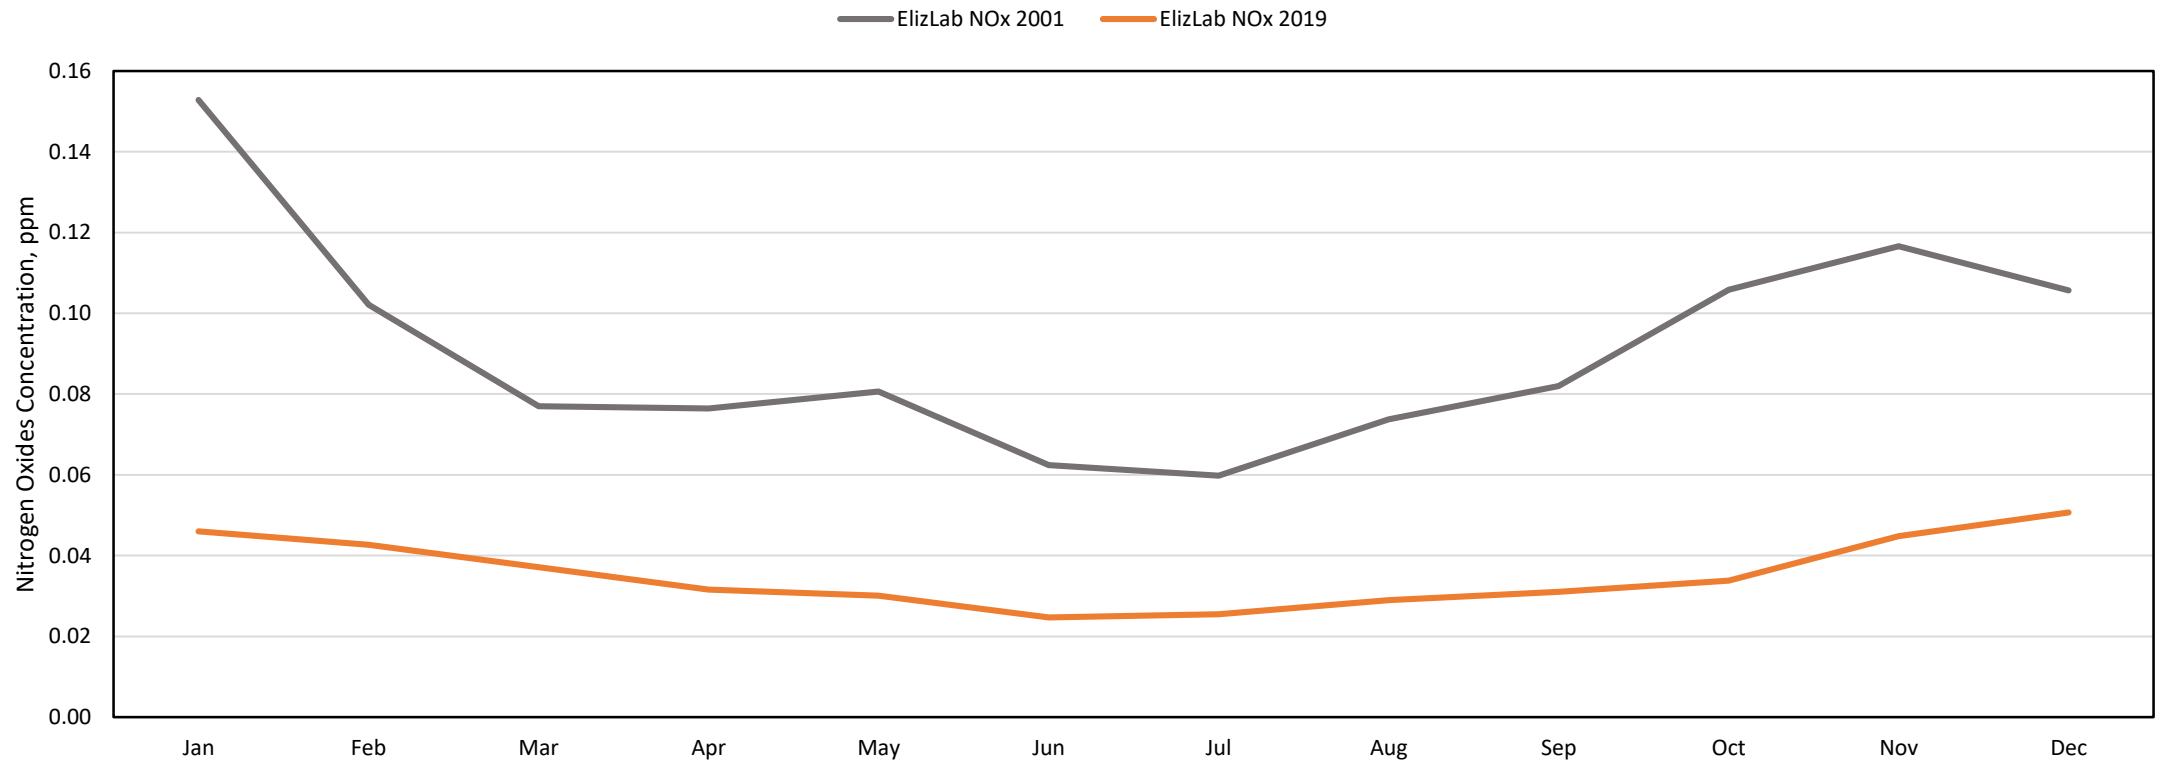

- “[C]leanest since 9/11,”
<https://www.nj.com/coronavirus/2020/04/njs-air-is-the-cleanest-its-been-since-911-due-to-coronavirus-shutdown.html>
- “[P]andemic response has cleared the air from LA to Wuhan,”
<https://www.washingtonpost.com/weather/2020/04/09/air-quality-improving-coronavirus/>
- “Reductions in traffic and industry have lowered nitrogen dioxide levels,” <https://www.wired.com/story/the-pandemic-has-led-to-a-huge-global-drop-in-air-pollution/>

Satellite Images and Ground-Level Data

- Differences between satellite data and ground-level data:
 - Satellites detect NO_2 once it has reached steady state with NO and O_3 at an elevation from the height of the satellite to 50 meters above ground level
 - Ground-level NO and NO_2 data is highly variable due to rapid reactions with ground-level O_3 and other VOCs
 - For ground-level data, March and April are generally among the cleanest months of the year due to seasonal meteorology
- Monitors show steady declines since 2001 which contradicts reports that this is cleanest air since 9/11

NOx data from Elizabeth, 2001 vs. 2019

Comparison of Monthly Nitrogen Oxides (NOx) Concentrations at Elizabeth Lab in 2001 and 2019
Parts per Million, ppm

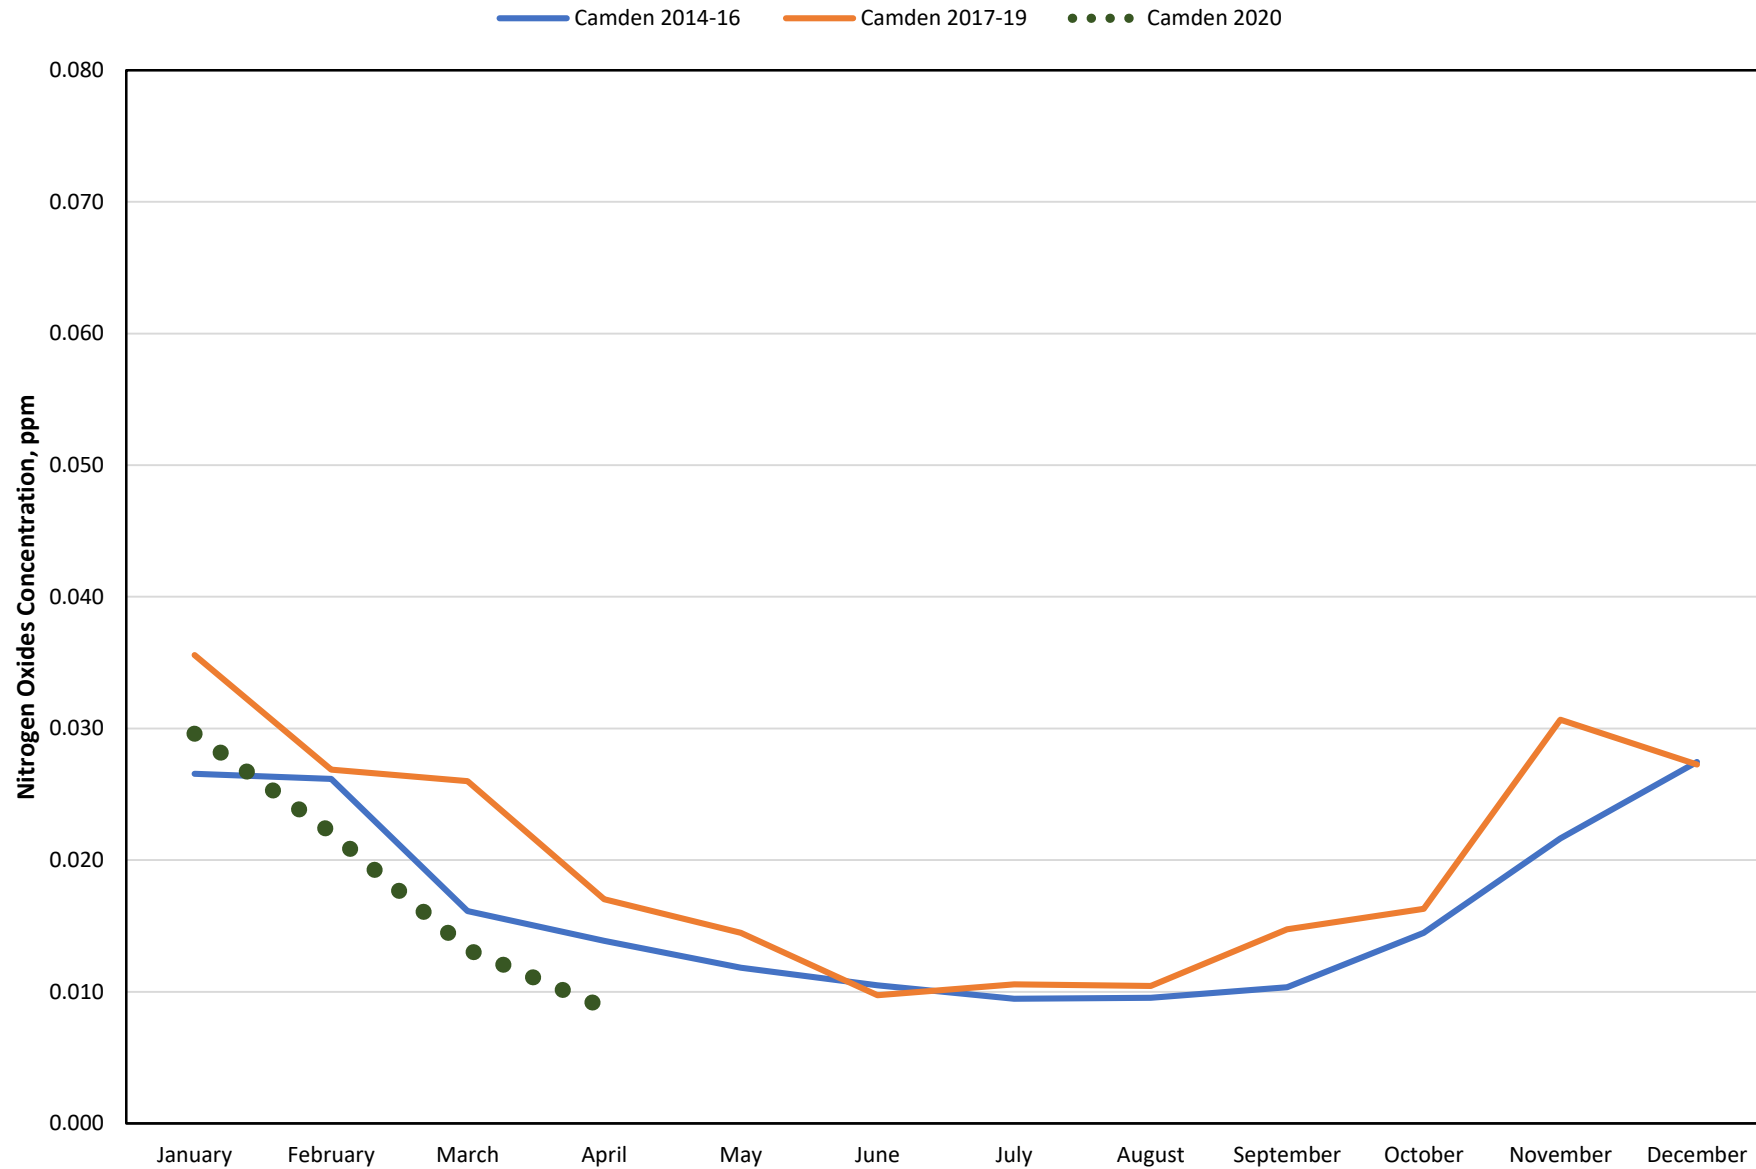

Multi-Year Analysis of NOx and PM_{2.5}

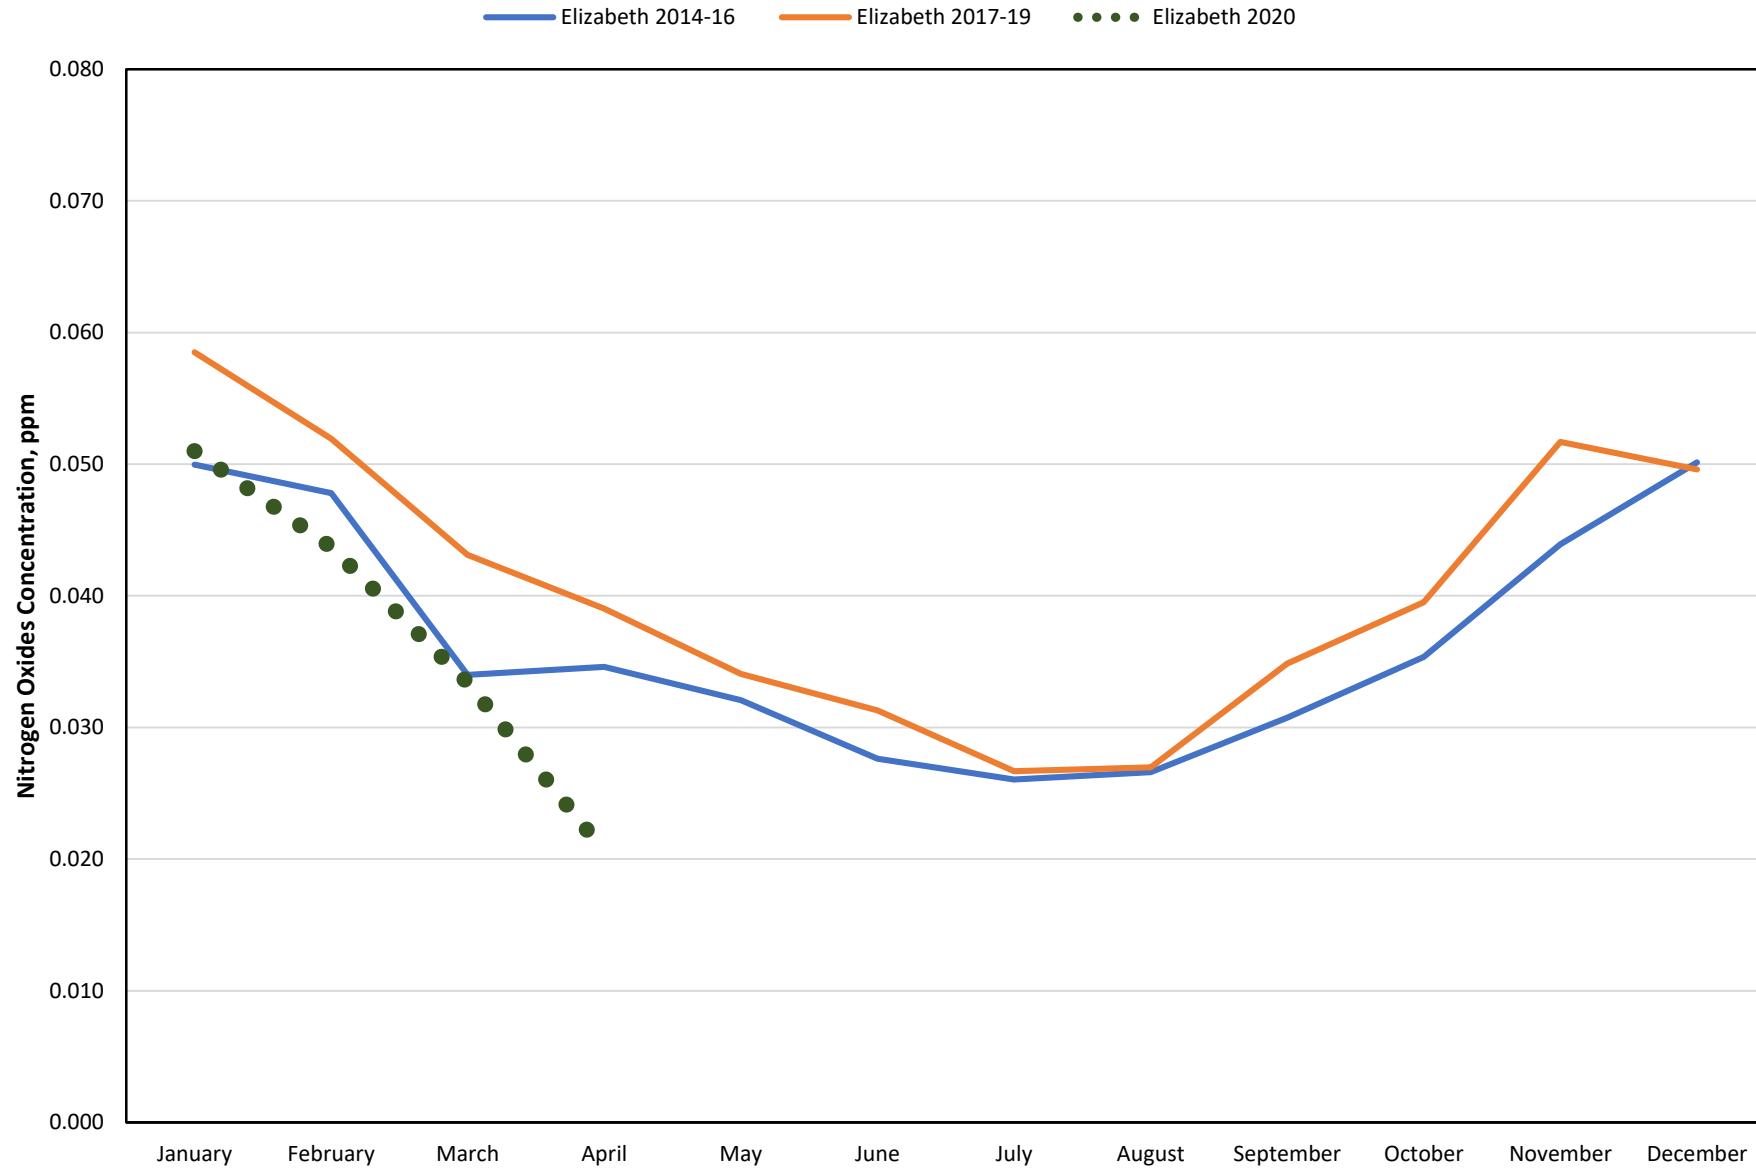

- Reduce effect of high and low concentration years by averaging 3-year periods, 2014-2016 and 2017-2019
- Use monthly averages for NOx and PM_{2.5}
- Focus on urban air monitoring stations
 - Camden Spruce Street
 - Elizabeth Lab (NJ Turnpike Exit 13)
 - Jersey City

April 2020 data shows significant decrease in NOx and PM_{2.5} levels at all stations compared with historical April data.

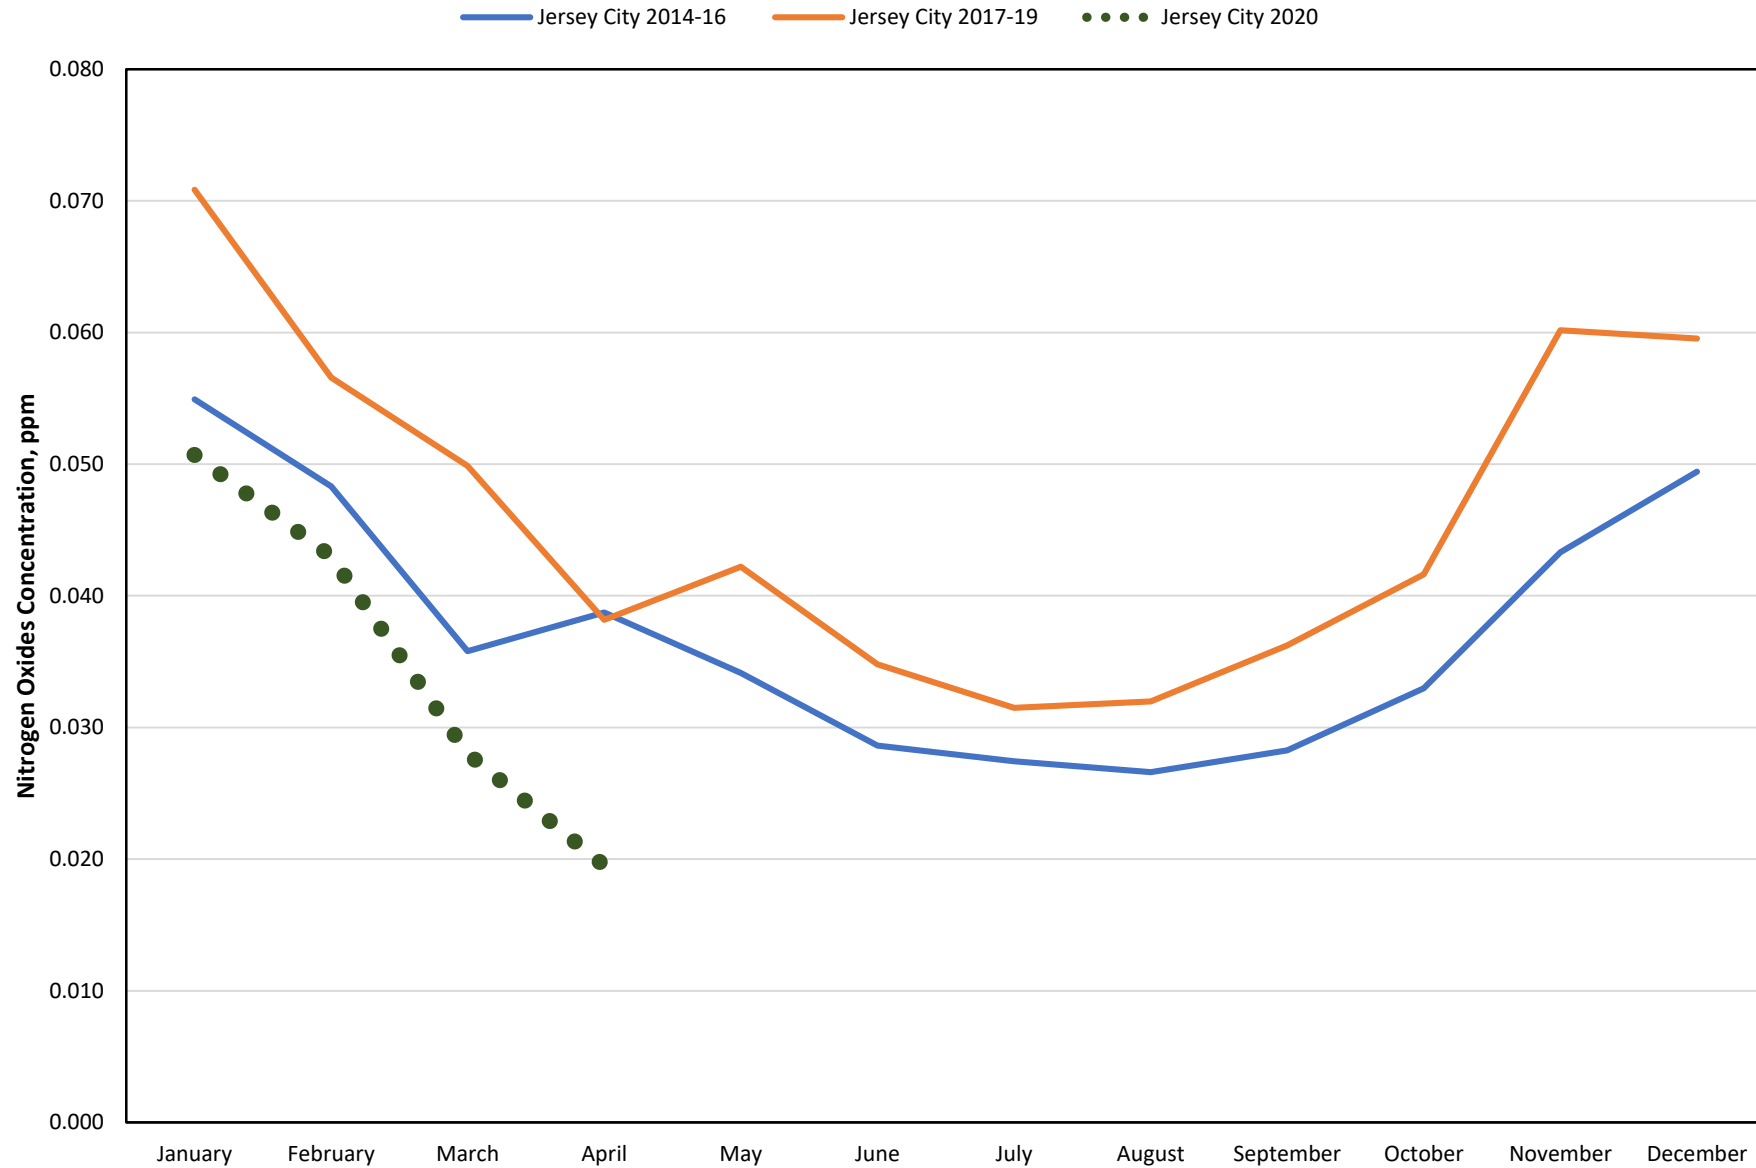

Comparison of 3-Year Average Monthly Nitrogen Oxides (NOx) Concentrations at Camden Spruce Street, 2014-16 and 2017-19 with 2020, Parts Per Million, PPM

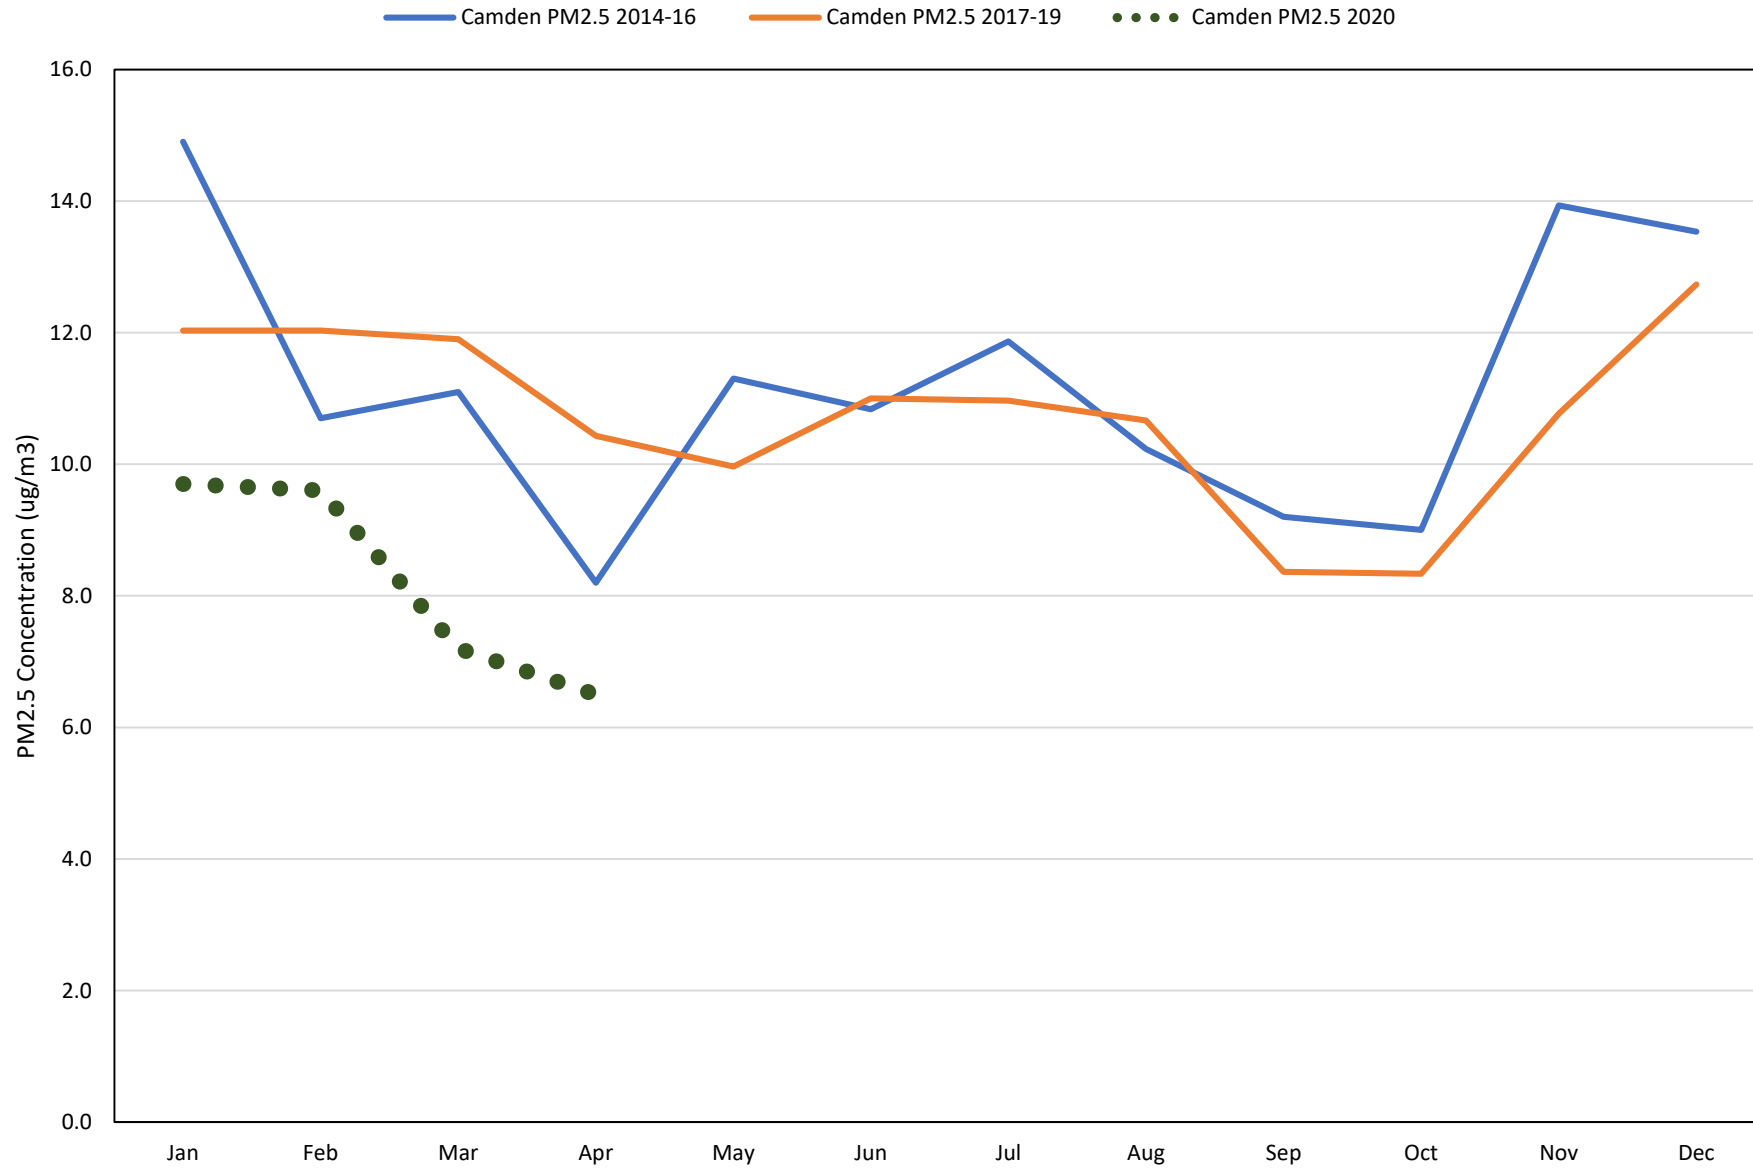

Comparison of 3-Year Average Monthly Nitrogen Oxides (NOx) Concentrations at Elizabeth, Exit 13, 2014-16 and 2017-19 with 2020, Parts Per Million, PPM

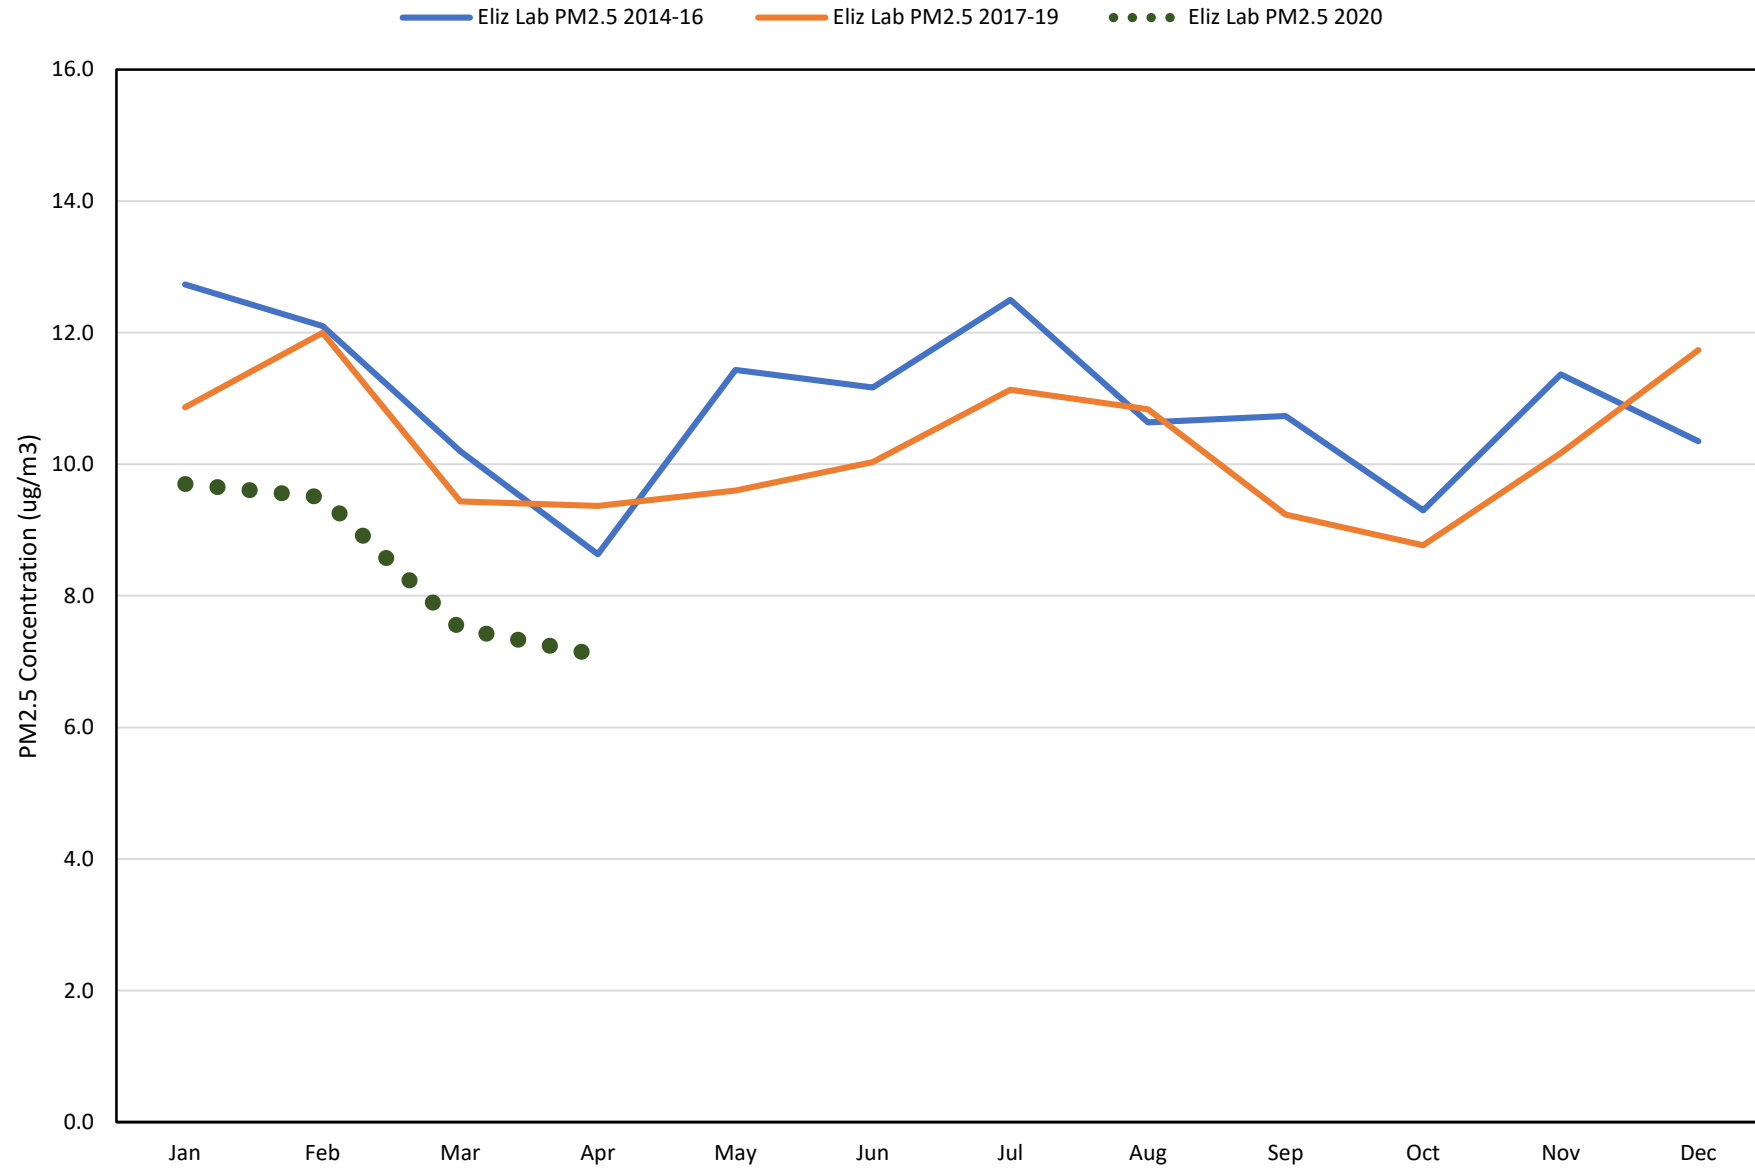

Comparison of 3-Year Average Monthly Nitrogen Oxides (NOx) Concentrations at Jersey City, 2014-16 and 2017-19 with 2020, Parts Per Million, PPM

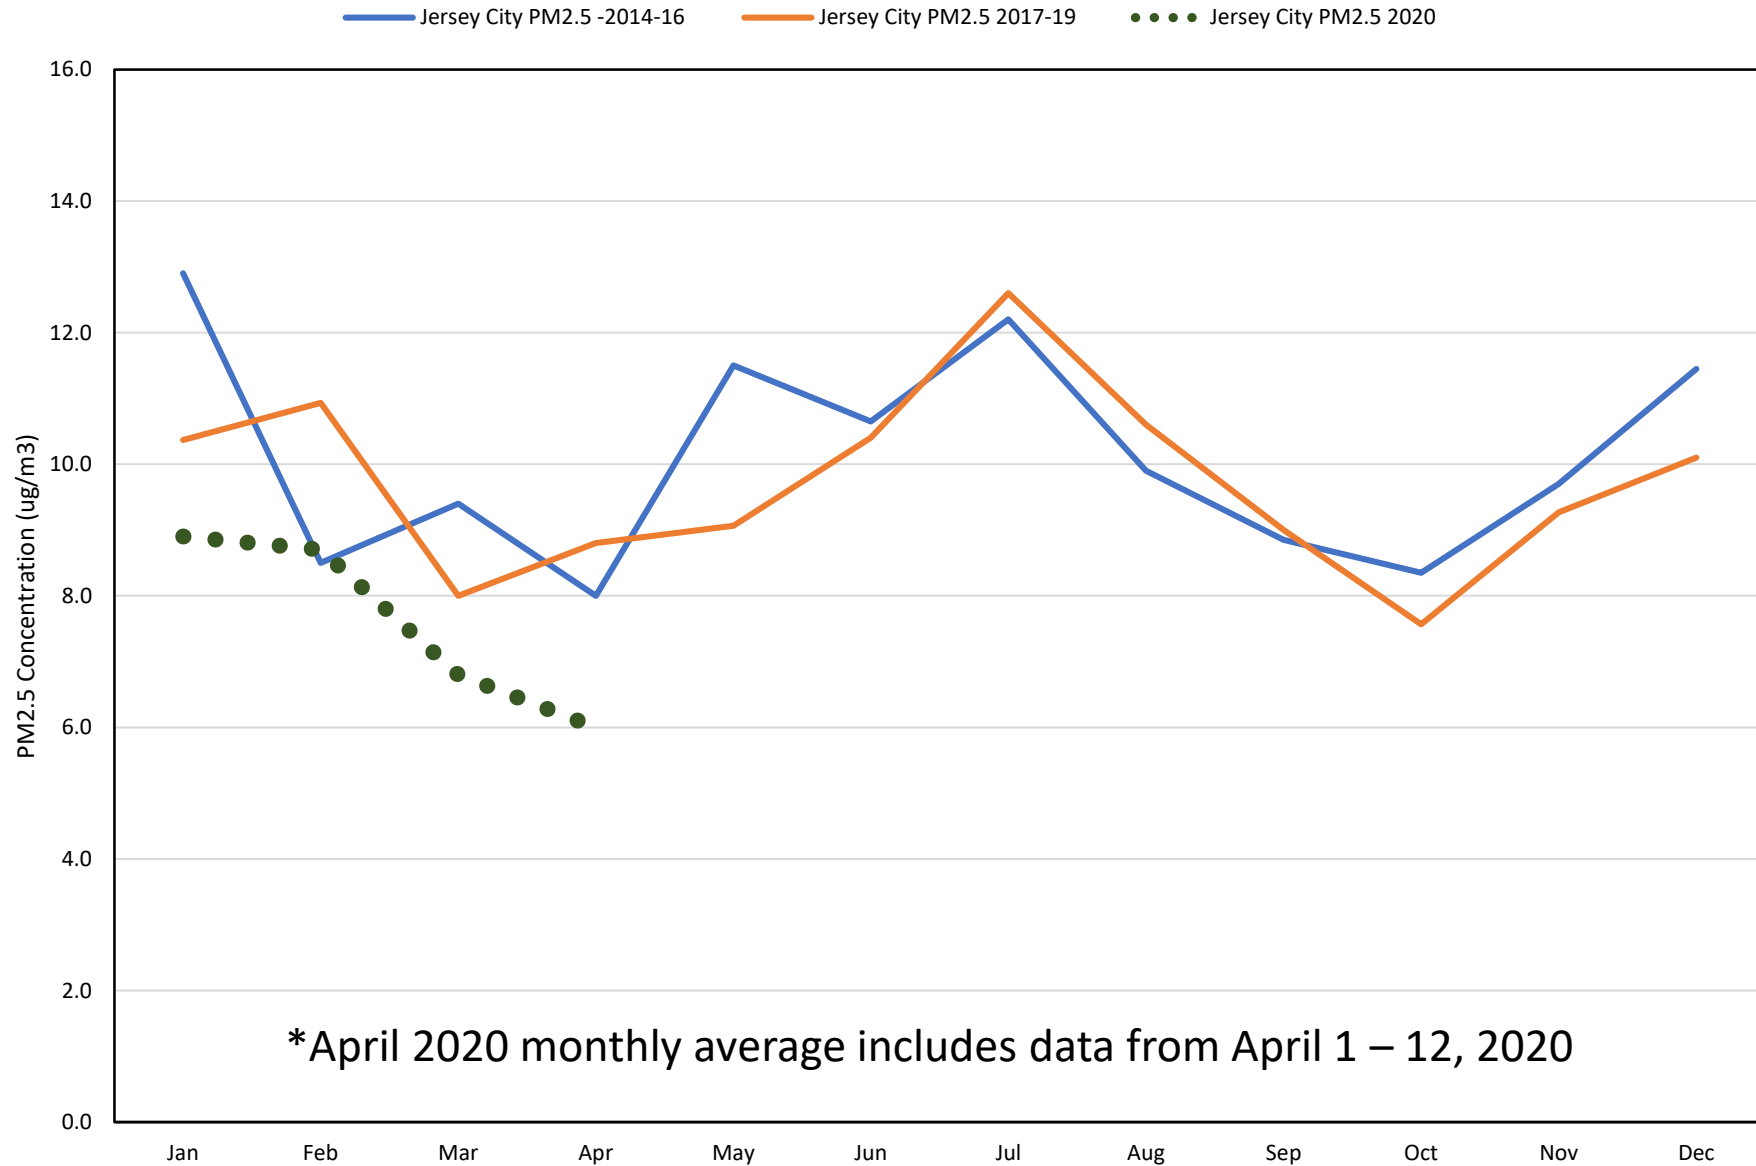

Comparison of 3-Year Average Monthly Fine Particle (PM2.5) Concentrations at Camden, 2014-16, and 2017-19 with 2020, Micrograms per Cubic Meter, ug/m3

Comparison of 3-Year Average Monthly Fine Particle (PM2.5) Concentrations at Elizabeth Lab Exit 13, 2014-16 and 2017-19 with 2020, Micrograms per Cubic Meter, ug/m3

Comparison of 3-Year Average Monthly Fine Particle (PM2.5) Concentrations at Jersey City, 2014-16 and 2017-19 with 2020*, Micrograms per Cubic Meter, ug/m3

*April 2020 monthly average includes data from April 1 – 12, 2020

Summary of NOx Concentrations

- Percent Change in 2014-2019 Monthly Average NOx Concentrations versus 2020 NOx Concentrations

	March 2020	April 2020
Camden	-37%	-43%
Elizabeth Lab	-13%	-44%
Jersey City	-35%	-49%

Summary of PM_{2.5} Concentrations

- Percent Change in 2014-2019 Monthly Average PM_{2.5} Concentrations versus 2020 PM_{2.5} Concentrations

	March 2020	April 2020
Camden	-38%	-30%
Elizabeth Lab	-23%	-21%
Jersey City*	-21%	-29%

*April 2020 monthly average includes data from April 1 – 12, 2020
