NJPDES Rule Index

The New Jersey Department of Environmental Protection has been charged with implementing and enforcing the Federal Clean Water Act and other Federal and State requirements pertaining to enhancing, protecting and restoring the quality of the waters of the State. The adoption of the NJPDES rules in 1997 represented a significant part of a comprehensive reform of the Department’s water resources management program. Attainment of our water quality goals requires the cooperative action of the Department and its partners in other government agencies, communities, and businesses.

This index was originally written to assist DEP water quality permit program staff in finding applicable provisions of the NJPDES rules. The Department decided to post the index to its web site to assist interested persons; including students, citizens, and members of the regulated community in understanding the NJPDES rules. The Department points out that the index is not intended to comprehensively answer all inquiries about the NJPDES rules, and is not a substitute for competent legal counsel. The index does not establish or affect legal rights or obligations. Among other things, the Department does not accept errors and/or omissions in this index as an defense for non-compliance with applicable provisions of NJPDES rules or other requirements. Permit program decisions in any particular case will be made applying the applicable law and regulations on the basis of specific facts.

Interested persons are invited to contact the Department for guidance regarding the application of the NJPDES rules.
