Managing Your Hazardous Waste: A Guide for Small Businesses

Hazardous

A Guide for Small Businesses

**PA

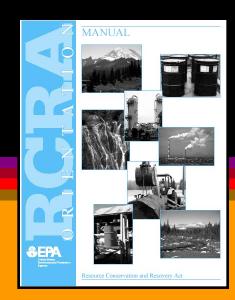

The label to the label

This user-friendly manual is targeted to small quantity generators of hazardous wastes.

The manual helps small businesses determine whether they generate hazardous waste and provides comprehensive information on how to comply with the federal hazardous waste regulations for small quantity generators. It explains how to obtain an EPA identification number, manage hazardous waste on site, ship hazardous waste off site, comply with land disposal restrictions, and conduct good housekeeping.

http://www.epa.gov/epaoswer/hazwaste/sqg/sqghand.htm

RCRA Orientation Manual

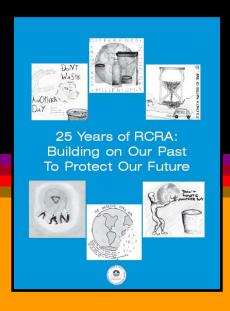

A good introductory manual on the solid and hazardous waste management programs under RCRA. The manual comprises seven sections:

- Introduction to the Resource Conservation and Recovery Act;
- Managing solid waste RCRA Subtitle D;
- Managing hazardous waste RCRA Subtitle C;
- •Managing underground storage tanks RCRA Subtitle I;
- Miscellaneous statutory provisions;
- •RCRA and its relationship to other environmental statutes; and
- •Public participation in the RCRA program.

25 Years of RCRA: Building on Our Past To Protect Our Future

The year 2001 was an important milestone in environmental protection: the 25th anniversary of the Resource Conservation and Recovery Act (RCRA). The RCRA statute, regulations, and programs were created at a time when we did not know how much waste was produced or what happened to it. What we knew for certain was that waste needed to be safely managed......

Welcome to RCRA Online

What is RCRA Online?

The RCRA Online database is designed to enable users to locate documents, including publications and other outreach materials, that cover a wide range of RCRA issues and topics.

While OSW makes every effort to keep this information timely and accurate, EPA makes no expressed or implied guarantees as to the accuracy or timeliness of the information contained in this database, the documents referenced in this database, or the choice of documents referenced in this database. OSW will, however, make an effort to correct errors brought to its attention.

In addition, since EPA cannot guarantee protection from potential alteration of or tampering with the materials on this server by outside parties, these materials do not constitute 'official' versions, and they are not intended, nor can they be relied upon, to create any rights enforceable by any party in litigation with the United States.

October 14, 1998 MEMORANDUM

SUBJECT: Management of Remediation Waste Under RCRA

TO: RCRA/CERCLA Senior Policy Managers

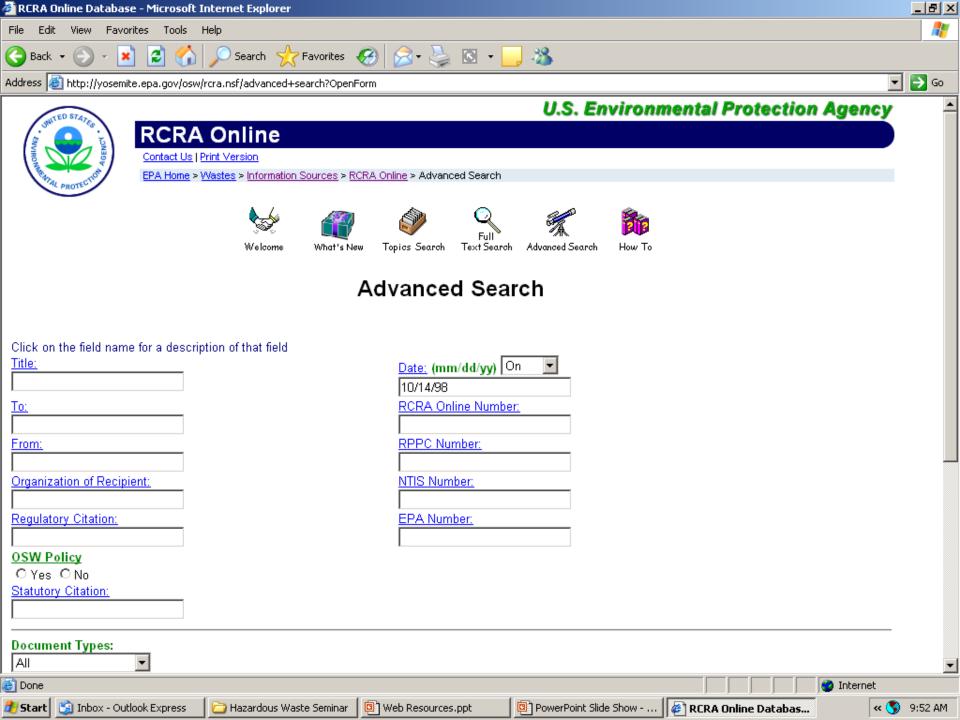

Regional Counsels

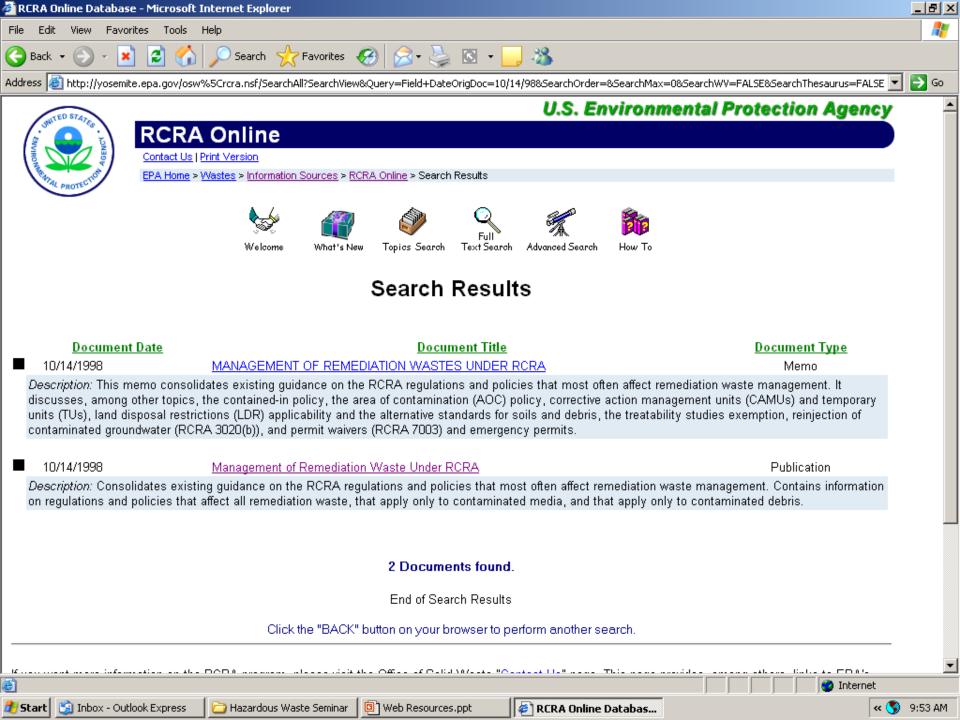

FROM: Timothy Fields, Jr., Acting Assistant Administrator for

Solid Waste and Emergency Response /signed/ Steven A. Herman, Assistant Administrator for Enforcement and Compliance Assurance /signed/

Rapid clean up of RCRA corrective action facilities and Superfund sites is one of the Agency's highest priorities. In this context, we often receive questions about management of remediation waste under the Resource Conservation and Recovery Act (RCRA). To assist you in successfully implementing RCRA requirements for remediation waste, this memorandum consolidates existing guidance on the RCRA regulations and policies that most often affect remediation waste management. We encourage you to work with the regulations, policies and approaches outlined in this memorandum to achieve our cleanup goals as quickly and efficiently as possible.

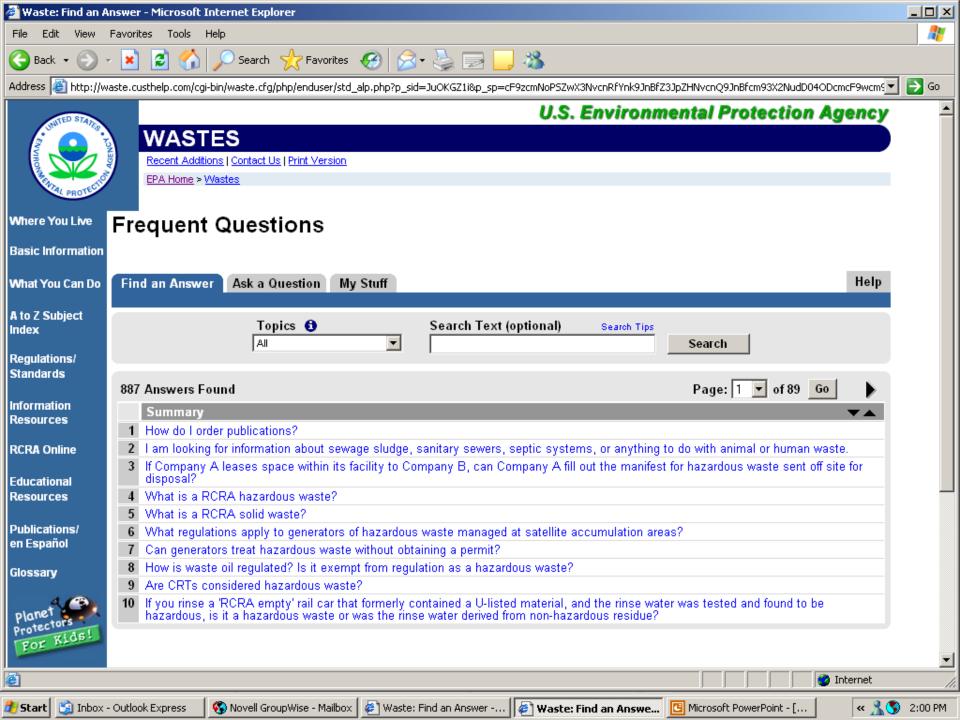

Note that not all remediation wastes are subject to RCRA Subtitle C hazardous waste requirements. As with any other solid waste, remediation wastes are subject to RCRA Subtitle C only if they are listed or identified hazardous waste. Environmental media are subject to RCRA Subtitle C only if they contain listed hazardous waste, or exhibit a characteristic of hazardous waste. These distinctions are discussed more completely below.

Block: Lot:

Comments:

As we approached the site we noticed piles of logs along the left side of the facility. If trees were planted as depicted on the site plan, we would not have seen the logs from the roadway. The logs, as we noticed upon entry, were in an area designated for final product. Following the site plan we moved around the site from left to right. There were no fire hydrants in place, as depicted on the site plan. There was also improper use of asphalt milling on the driveway. As we continue toward the back of the site there was a fire pond, but inadequate per the site plan. The fire breaks between the piles are missing. There is also no hose house, or pump house on site, as it says there should be on the site plan. The vertical markers need to be erected correctly, and were no horizontal markers noted anywhere on site. The site plan also depicts that there are two entrances into the site, the one on the right is for trucks with unprocessed material to drop off and the left for processed final product to leave. The right entrance is blocked off with a gate and looks to have not been used for some time. If the right entrance is not to be used, then permit/site plan modification needs to be submitted, and appropriate signage needs to be in place at the left entrance. The driveways onto and off the site are not paved. There is also a large pile of overs near the back right corner that needs to be removed ASAP. We did also notice a truck enter the site and dump a load, and there was no one inspecting the loads. There were no managers on site, only one machine operator who did not speak english was present. No records could not be reviewed. There was also no tub grinder on site. There will be violations issued, and the site will also be refered to the Fire Safety Department head of South Brunswick Twey.
