Salmon and Trout - Know the Difference

Adapted from New Hampshire Fish and Wildlife Department

Salmon

- Adipose fin is gray to olive – never orange.
- Dark spots, some may be X-shaped.
- Caudal fin may be slightly forked. Tail not spotted.
- Caudal peduncle is narrow and tapered.
- Maxillary usually extends to rear edge of eye or slightly beyond.
- Roof of Mouth
- Vomerine teeth
- Small and arranged in a single row along a raised shaft on the roof of the mouth.

Brown Trout

- Adipose fin may be fringed or spotted with orange or red.
- Large dark (black, brown or red) spots.
- Caudal fin rounded or square, not forked. Spots sparse or absent.
- Caudal peduncle is thick and stocky.
- Maxillary generally extends well past rear edge of eye.
- Roof of Mouth
- Vomerine teeth
- Well-developed and arranged in zig-zag rows along a raised shaft on the roof of the mouth.

Rainbow Trout

- Adipose fin usually spotted.
- Many small black spots.
- Caudal fin rounded or square, not forked. Black spots cover tail.
- Pink stripe from head to tail (not always present).
