

HARMFUL ALGAL BLOOMS

What are they?

- Freshwater harmful algal blooms in rivers, streams or lakes are caused by cyanobacteria.
- Cyanobacteria, also sometimes known as blue-green algae, are not true algae.
- May form dense blooms under suitable environmental conditions: elevated temperatures, high levels of nutrients and calm water.
- Can produce toxins that are dangerous for humans, pets, livestock and wildlife.
- Toxins are referred to as cyanotoxins.
- Blooms not producing toxins can cause allergic reactions or skin irritation.

What do they look like?

- May look like blue or green spilled paint, pea soup or parallel streaks
- Contact or ingestion may cause illness
- **Avoid It & Report It!**
