

# NEW JERSEY

From Original Surveys based on the  
Triangulation of the U.S. Coast and Geodetic Survey

Scale: 5 miles to an inch

GEORGE H. COOK State Geologist. C. C. VERMEULE, Topographer.  
1888

## NOTES.

The contour lines or lines of equal elevation are shown for each 50 feet south of the Raritan and Millstone rivers and for the first 50 feet north of each hundred feet north of said rivers. The lines at 500, 1000 and 1500 feet elevation are drawn heavy. The datum is mean sea-level.

By reference to the State Map on the same scale which shows all villages, highways etc., any locality may be readily identified.

## LEGEND.

- Railroad Stations
- Tide Marsh
- Fresh Marsh and Swamp
