

GEOLOGICAL SURVEY OF NEW JERSEY

HENRY B. KÜMMEL, State Geologist C. C. VERMEULE, Topographer

ORIGINAL SURVEY, 1884
PRINCIPAL FEATURES REVISED, 1905
EDITION OF 1913

ATLAS SHEET No. 33

NOTE.—The curved lines are level lines drawn on the earth's surface. All points through which any given line passes are at the same level and their height above sea level is shown by the figures on the line. The rise or fall from any line to the next is, as the figures will show, 10 feet. Figures put on any line show the actual elevation of the surface at a point indicated by a small cross. The dotted lines on the blue ground are lines of equal depth of water, and the figures accompanying show depth at mean or half tide.

Scale: 1 Mile to an Inch.
Yards 0 100 200 300 400 500 600 700 800 900 1000
Meters 0 100 200 300 400 500 600 700 800 900 1000
Contour interval 10 feet

The shore lines of tidal waters, and the triangulation are mainly from the United States Coast and Geodetic Survey. The shore lines of the bays, the highways, railroads and some other details were revised in 1905.
