

NOTE.—The contour lines are level lines drawn on the earth's surface. All points through which they pass are at the same level and their height above mean sea level is shown by the figures on the line. The rise or fall from any line to the next is, as the figures will show, 10 feet. Figures not on any line show the actual elevation of the surface at a point indicated by a small cross. The dotted lines on the blue ground are lines of equal depth of water, and the figures accompanying show depth at mean or half tide.

The shore lines of tidal waters, and the triangulation are mostly from the United States Coast and Geodetic Survey. The shore lines of the bays, the highways, railroads and some other details were revised in 1905. In 1925 shore line changes were made at Barnegat Inlet and below Beach Haven. These were in part from the latest Coast Survey Charts and other surveys.
