

STATE OF NEW JERSEY  
DEPARTMENT OF CONSERVATION AND DEVELOPMENT  
ATLAS SHEET No. 35

SHEET 35  
DIVISION OF GEOLOGY AND TOPOGRAPHY  
HENRY B. KÜMMEL, State Geologist

ORIGINAL SURVEY, 1886  
PRINCIPAL FEATURES REVISED, 1917, 1929  
EDITION OF 1930

NOTE: The curved lines are level lines drawn on the earth's surface. All points through which any given line passes are at the same level and their height above mean sea level is shown by the figures on the line. The rise or fall from any line to the next is as the figures will show (1) feet on the northwestern part and five (5) feet on the remainder of the map. Figures not on any line show the actual elevation of the surface at a point indicated by a small cross. The dotted line on the line ground are lines of equal depth of water, and the figures accompanying show depth at mean or half tide.

KEY TO ADJOINING SHEETS

The shore lines of tidal waters, and the triangulation are in part from the United States Coast and Geodetic Survey. The highest, railroad, and some other details were revised in 1929. The forests are as in 1886.

LEGEND

- TIDE MARSH
- FRESH MARSH
- WET SWAMP
- CEGAR SWAMP
- CRANBERRY BOGS
- RAILROAD STATIONS
- Coastline (dotted)

ORIGINAL SURVEY AND REVISIONS TO 1917 MADE UNDER DIRECTION OF C. C. VERMILIE, TOPOGRAPHIC ENGINEER, BY L. P. PLUMMER, TOPOGRAPHIC ENGINEER.
