

NOTE.—The curved lines are level lines drawn on the earth's surface. All points through which any given line passes are at the same level and their height above mean sea level is indicated by the figures on the line. The line is drawn from any line to the next to the contour interval. Figures not on any line show the actual elevation of the surface at a point indicated by a small cross. Figures on blue ground indicate the depth of water in feet at mean low tide. The numbers shown at the corners are for the Plane Coordinate Grid System based on the N. J. Geodetic Control Survey. (The last three digits of the coordinates are omitted. 112, 130, equals 1,100,000 feet.)
