

NOTE.—The curved lines are level lines drawn on the earth's surface. All points through which any given line passes are at the same level and their height above mean sea level is shown by the figures on the line. The rise of fall from any point to the next is, as the figure with above, ten feet with some 5 foot contours in Cape May County. Figures not on any line show the actual elevation of the contour at a point indicated by a small cross. Figures on the ground indicate soundings in feet at Mean Low Tide. The uniform figure at the bottom are for the Time Coordinate Grid System based on the N. J. Geologic Control Survey. (The last three digits of the coordinates are omitted, viz. 1,000, equals 1,000,000 feet.) The shore lines of tidal waters and the soundings are from charts and maps of the United States Coast and Geodetic Survey.
