

GEOLOGICAL SURVEY OF NEW JERSEY

HENRY B. KÜMMEL, State Geologist C. C. VERMEULE, Topographer

ORIGINAL SURVEY 1884
PRINCIPAL FEATURES REVISED 1905

ATLAS SHEET No. 37

NOTE. The curved lines are level lines drawn on the earth's surface. All points through which any given line passes are at the same level and their height above mean sea level is shown by the figures on the line. The rise or fall from any one point to the next is as the figures will show ten (10) feet on the inclinations part and four (4) feet on the remainder of the map. Figures not on any line show the actual elevation of the surface at a point indicated by a small cross. The dotted lines on the blue ground are lines of equal depth of water and the figures accompanying show depth at mean or half tide.

Scale: 1 mile to an inch

The shore lines of tidal waters and the triangulation are mainly from the United States Coast and Geodetic Survey. The shore lines of the bays, highways, railroads and some other details were revised in 1905.
