

SHEET 37
DIVISION OF GEOLOGY AND TOPOGRAPHY
HENRY B. KÜMMEL, State Geologist

ORIGINAL SURVEY, 1884
PRINCIPAL FEATURES REVISED, 1913, 1929
EDITION OF 1929

NOTE. The curved lines are level lines drawn on the earth's surface. All points through which any given line passes are at the same level and their height above mean sea level is shown by the figures on the line. The rise or fall from any line to the next is, as the figures will show ten (10) feet on the northwestern part and five (5) feet on the remainder of the map. Figures not on any line show the actual elevation of the surface at a point indicated by a small cross. The figures on the blue ground indicate depth of water.

KEY TO ADJOINING SHEETS

Scale: 1 Mile to an Inch.
Miles

The shore lines of the beaches were mainly revised in 1928. The shore lines of tidal waters, and the triangulation are mainly from the United States Coast and Geodetic Survey.
