The image contains a detailed geological map of New Jersey, showing various sedimentary deposits and formations. The map includes a legend with symbols for different types of deposits, such as sand, gravel, and clay, as well as symbols for natural and artificial water bodies. The map is overlaid with contour lines indicating elevations, with values marked in feet. The legend at the bottom of the map provides a key for interpreting the symbols and their meanings. The map is designed to help geologists and environmental scientists understand the geological history and current geology of the region. The map is credited to the New Jersey Geological Survey and the Department of Environmental Protection, indicating its authoritative source.
