

Fill and Migration to Ground Water Pathway

Greg Neumann,

Bureau of Environmental Evaluation & Risk Assessment

Greg.Neumann@dep.nj.gov

Fill - Migration to Ground Water Pathway

- The adoption of the Migration to Ground Water Pathway standards does not change the process of evaluating fill relative to this pathway.
- The 2015 Fill Material Guidance for SRP Sites (Version 3.0 April 2015) already addresses the IGW pathway in Section 4.6. Fill containing concentrations of contaminants > former IGW SCC could be addressed with SPLP to derive site-specific ARS for the donor material.
- Donor material that exceeds the MGW pathway standards may also be addressed with SPLP as described in the Fill Guidance.
