Dear NJBPU,

In its current form, New Jersey's draft energy master plan doesn't work. It does not maximize clean energy options.

That's why I am calling upon you to pass a bolder, cleaner energy plan, including:

- Cleaning up to "natural gas" standards or permanently retiring the state's dirty coal plants beginning with BL England, a coal plant outside Ocean City.
- Exceeding the state's goal to reduce energy demand by 20% by 2020 via energy efficiency measures.

Please protect the environment for our children's future.

Sincerely,

Jody Kruse  
Burlington, NJ 08016
