

Percentages represent the proportion found in the specified variant lineage. "Other" represents 158 additional lineages which include other COVID-19 variants not classified as variants of concern or variants of interest.

\*Specimens collected 8/1/2021 – 8/7/2021 reflects data for one week with a total of 155 specimens.

\*Each regional chart represents the proportion of the specified variant lineage and is based on sequencing results from the 4 weeks prior to the week of August 7, 2021. There is an approximately 14-24-day time lag between specimen collection and report of sequencing results to NJDOH. "Other" represents additional lineages which include other COVID-19 variants not classified as variants of concern or variants of interest.

Includes all sequencing results reported by Commercial Labs (LabCorp, Aegis Sciences Corporation, Infinity Biologix and Quest Diagnostics) and the State Public Health Lab that have been submitted for surveillance purposes.

Data reported is based on a subset of sampled specimens from NJ residents sequenced for COVID-19 variant surveillance.
