

Directions for COVID-19 Quiz Game:

1. Open PowerPoint in Slide Show. Stay on the first slide which is the “game board”.
2. Consider dividing the audience into two groups to have a friendly competition.
3. Each group selects a category (e.g. “COVID-19 Basics”) and an award level (e.g., for “100”). Click on the corresponding block (the “100” is a hyperlink that will take you to the corresponding question).
4. Click to read the question. After the person answers, click again to read the answer.
5. If the answer is correct, that person/team will receive those points.
6. Click the  symbol to return to the game board.
7. Continue the same process until the board is finished. The hyperlinks (numbers) on the game board will change colors (from orange to blue) after they have been used. This will help you keep track of the questions you already used.
8. Total the points for each team to see who won!

If it is not possible to play the game via PowerPoint, consider using some of the questions and answers for newsletters, social media, or email communications.

COVID-19 Basics:

100 Level:

Question: True/False:
COVID-19 stands for Coronavirus Disease 2019.

Answer: What is True?

Notes:

In COVID-19, CO stands for ‘corona’, “VI’ for ‘virus,’ and ‘D’ for disease. Formerly, this disease was referred to as “2019 novel coronavirus” or “2019-nCoV.”

200 Level:

Question: Multiple Choice:
How does COVID-19 spread?

- A) Coughs and sneezes from an infected person
- B) Infected surfaces
- C) Food

D) Both A and B

Answer: What is A and B?

Notes:

When people with COVID-19 cough, sneeze, sing, talk, or breathe they produce respiratory droplets. These droplets can be inhaled or land in the mouth of someone close by. Respiratory droplets can also land on surfaces and objects. It is possible that a person could get COVID-19 by touching a surface or object that has the virus on it and then touching their own mouth, nose, or eyes. Spread from touching surfaces is not thought to be a common way that COVID-19 spreads.

300 Level:

Question: Multiple Choice:

Which of the following best describes COVID-19?

- A) It is caused by bacteria.
- B) It is a fake disease.
- C) It is just like the flu.
- D) It is caused by a virus.

Answer: What is D?

400 Level:

Question:

You should stay this far away from people to help prevent the spread of COVID-19?

Answer:

What is 6 feet (or 2 arm lengths)?

500 Level:

Question: Name three symptoms of COVID-19?

Answer: What is (any three of the following is acceptable).

- Fever
- Cough
- Shortness of breath
- Chills, shivering
- Nausea, vomiting, diarrhea
- Muscle pain
- Headache
- Sore throat

- New loss of taste or smell
- Stuffy or runny nose

Myth or Fact about COVID-19

100 Level:

Question: True/False:

Older people (65+) and those with certain medical conditions (e.g., cancer, chronic kidney disease) have an increased risk of getting sick with COVID-19.

Answer: What is True?

Notes: Although anyone of any age can get severely ill from COVID-19, older adults and those with certain medical conditions are among a group of people who are at increased risk for serious health consequences if they get the virus.

200 Level:

Question: True/False:

Although I have no symptoms of COVID-19, I can still spread the disease to others.

Answer: What is True?

Notes: Yes, you can spread COVID-19 to others even if you don't feel sick or have symptoms. The virus spreads most easily when an infected person has symptoms, but it also can spread before symptoms start. It can take 2-14 days after someone is exposed to the virus for the symptoms to show up.

300 Level:

Question: True/False:

COVID-19 is a serious disease.

Answer: What is True?

Notes: True. COVID-19 can be a minor illness in some or lead to severe disease or even death in previously healthy people. This means, everyone should take the virus seriously! It is believed that the more people who get vaccinated, the less sickness will be in our communities. Vaccination is an important step in helping to prevent this illness and its potentially devastating consequences.

400 Level:

Question: True/False: The following are emergency symptoms of COVID-19.

- Trouble breathing
- Persistent pain or pressure in the chest
- New confusion
- Inability to wake or stay awake

- Bluish lips or face

Answer: What is True?

Notes: These are emergency warning signs that a person is in danger. Seek help immediately if you experience any of the following symptoms!

500 Level:

Question: True/False: If soap and water are not available, you can clean your hands with hand sanitizer. The sanitizer should contain at least 60% alcohol.

Answer: What is True?

Myth or Fact about COVID-19 Vaccine

100 Level:

Question: True/False:

COVID-19 vaccines do NOT affect a person's DNA (genetic material)

Answer: What is True?

Notes: COVID-19 mRNA vaccines (Pfizer and Moderna) teach our cells how to make a protein that triggers an immune response. The COVID-19 viral vector vaccine (J&J) uses a modified version of a different virus (the vector) to deliver important instructions to our cells. Neither affects nor interacts with our DNA in any way.

200 Level:

Question: True/False:

COVID-19 vaccines do NOT affect your ability to get pregnant.

Answer: What is True?

Notes: There is no evidence suggesting that fertility problems are a side effect of ANY vaccine. People who are trying to become pregnant now or who plan to try in the future may receive the COVID-19 vaccine when it becomes available to them. For more information, please see the following flyer, https://www.state.nj.us/health/cd/documents/topics/NCOV/covid19_vaccines_fertility_flyer.pdf.

300 Level:

Question: True/False

COVID-19 vaccines are **safe and effective**.

Answer: What is True?

Notes: COVID-19 vaccines were evaluated in tens of thousands of participants in clinical trials. The vaccines met FDA's rigorous scientific standards for safety, effectiveness, and manufacturing quality needed to support emergency use authorization (EUA).

Millions of people in the United States have received COVID-19 vaccines, and these vaccines will undergo the most intensive safety monitoring in U.S. history. This monitoring includes using both established and new safety monitoring systems to make sure that COVID-19 vaccines are safe.

400 Level: Wearing a mask and physical distancing are not enough to protect me from COVID-19. I still need to get the vaccine.

Answer: What is True?

Notes: Wearing masks and social distancing help reduce your chance of being exposed to the virus or spreading it to others, but these measures are not enough. Vaccines will work with your immune system so it will be ready to fight the virus if you are exposed.

The combination of getting vaccinated and following CDC's recommendations [to protect yourself and others](#) will offer the best protection from COVID-19.

500 Level:

Question: I shouldn't wait for a specific vaccine since they are all effective in preventing serious COVID-19 illnesses.

Answer: What is True?

Notes: It is not advisable to change your appointment in order to wait for a specific vaccine to come in stock. All of the COVID-19 vaccines available are highly effective – especially at preventing death and severe illness. It is strongly recommended to receive the first vaccine available.

COVID-19 Vaccine

100 Level:

Question: True/False

This helps our bodies develop immunity to the virus that causes COVID-19 without us having to get the illness

Answer: What is COVID-19 Vaccine?

200 Level:

Question: True/False:

In addition to getting the COVID-19 vaccine, I should also receive any other vaccines which are recommended for me.

Answer: What is True?

Notes:

Yes, you should continue to receive your routinely recommended vaccines. These vaccines will help protect you from other types of serious illnesses.

Wait at least 14 days before getting any other vaccine, including a flu or shingles vaccine, after you get your COVID-19 vaccine. Or if you get any other vaccine first, wait at least 14 days before getting your COVID-19 vaccine.

300 Level:

Question: The COVID-19 vaccine(s) do NOT cause COVID-19.

Answer: What is True?

Notes: None of the early vaccines (those by Moderna, Pfizer, AstraZeneca, or J&J) are live weakened versions (similar, for example, to the measles, mumps, rubella, or varicella (chickenpox) vaccines). **This means that a COVID-19 vaccine cannot make you sick with COVID-19.**

Moderna's and Pfizer's are mRNA vaccines, and AstraZeneca's and J&J's are non-replicating vectored vaccines. You can learn more about the different types of vaccines being tested in the response to "What types of COVID-19 vaccines are being tested?", visit

<https://www.chop.edu/centers-programs/vaccine-education-center/making-vaccines/preventcovid>

400 Level:

Question: True/False: Even though I already got sick with COVID-19, it would still be beneficial to receive the COVID-19 vaccine.

Answer: What is True?

Notes: COVID-19 vaccination should be offered to you regardless of whether you already had COVID-19 infection. You should not be required to have an antibody test before you are vaccinated. However, anyone currently infected with COVID-19 should wait to get vaccinated until after their illness has resolved and after they have met the criteria to discontinue isolation. Additionally, current evidence suggests that reinfection with the virus that causes COVID-19 is uncommon in the 90 days after initial infection. Therefore, people with a recent infection may delay vaccination until the end of that 90-day period if desired.

500 Level:

After receiving the COVID-19 Vaccine, I will still need to wear a mask and physical distance in public gatherings.

Answer: What is True?

Notes:

Fully vaccinated people should continue to wear masks and stay 6 feet apart from other people when they are in public, visiting with unvaccinated people from multiple household, visiting

with unvaccinated people who are at increased risk for severe COVID-19 disease or who have an unvaccinated household member who is at increased risk for severe COVID-19 disease.

There are certain circumstances where a mask may not be necessary if you are fully vaccinated.

For now, fully vaccinated people can gather indoors without physical distancing or wearing masks with:

- Other people who are fully vaccinated
- Unvaccinated people from one other household, unless any of those people or anyone they live with has an [increased risk for severe illness from COVID-19](#)

For more information, visit <https://www.cdc.gov/coronavirus/2019-ncov/vaccines/fully-vaccinated-guidance.html>.
