These Tests Could Save Your Baby's Life

Newborn Screening Tests

There may be other tests besides those required by your state. More helpful information is available by contacting:

Fax: 609-530-8373

PO Box 364 • Trenton, NJ 08625-0364
www.newbornscreening.nj.gov

If the results of the first test are not within normal limits, it does not necessarily mean your baby has a disorder. No test is perfect. There is a small chance that the test may show a problem when no problem exists. There is also a small chance that the test may not show a problem when a problem exists. This may also vary from one condition to another.

Commissioner
Why does my baby need Newborn Screening tests?
Most babies are healthy when they are born.
We test all babies because a few babies look healthy but have a rare health problem.
If we find problems early, we can help prevent serious problems like mental retardation or death.

Why do some babies need to be retested?
Your baby may be retested if you leave the hospital before 24 hours.
Some States require a second test on all babies.
Some babies need to be retested because there is a problem with the blood sample.
A few babies need to be retested because the first test showed a possible health problem.

What if my baby needs to be retested?
Your baby’s health professional or the State Health Department will contact you if your baby needs to be retested. They will tell you why the baby needs to be retested and what to do next.
If your baby needs to be retested, get it done right away.
Make sure that your hospital and health professional have your correct address and phone number.

What if I have questions?
Ask your baby’s health professional if you have questions or concerns.
