EXECUTIVE SUMMARY

2013 Intoxicated Driving Program Statistical Summary Report

From January 1, 2013 through December 31, 2013 the State of New Jersey's Intoxicated Driver Program (IDP) collected data from 20,416 DUI offenders who attended the 21 county and three regional facilities. The county (12-hour) IDRCs primarily detain, educate and screen offenders *sentenced* as first DUI offenders; however, many of these individuals may have more than one *lifetime* DUI offense, although sentenced as a first time offender. Those sentenced as multiple offenders (three or more) also attend the 12-hour IDRC. The Regional (48-hour) IDRCs primarily detain offenders sentenced as second offenders, although many of these may be multiple lifetime DUI offenders. The following statistical report presents characteristics of IDRC clients who completed the evaluation and education portions of the IDRC program.

- Compared to the 2009 NJ Household Survey respondents, a higher proportion of IDP clients used alcohol in their lifetimes (96% vs. 87%) and in the past 12 months (86% vs. 69%).
- Most (76%) of the IDP clients had only one lifetime alcohol-related offense on their motor vehicle records, 18% had two offenses, and 6% had three offenses.
- Prevalence of lifetime use of marijuana, cocaine and heroin by IDP clients was much higher than the levels reported by NJ Household Survey respondents (50% vs. 30%, 14% vs. 10%, 4% vs. 1%, respectively).
- Female clients reported consistently higher lifetime cocaine, heroin and analgesic use than their male counterparts.
- The proportion of White IDP clients with reported lifetime use of marijuana, cocaine, heroin and analgesics were greater than that of any other race/ethnicity category.
- Younger clients (20 year-olds and younger) have higher lifetime prevalence of use for marijuana (66%); however, lifetime cocaine use was the highest for those age 50 and older (18%).
- 43% of IDP clients had a referral for assessment at an affiliated treatment agency after the IDRC class.
- Of those with any referral, 90% were referred for an assessment, and 7% were either currently enrolled or had completed treatment to satisfy IDRC requirements.
- Clients from Hudson, Essex, and Union Counties had the lowest referral rates (28%, 29% and 29%, respectively) while those from Sussex, Ocean and Monmouth Counties had the highest referral rates (62%, 65% and 73%, respectively).
- Morris County had the highest proportion of 18-25 year-olds attending IDRC (31%) and Hudson County had the lowest percentage of this age group attending IDRC (19%).
- 66% of 16-20 year-old IDRC clients self-reported lifetime marijuana use, higher than the general IDP clients (50%).

BACKGROUND

As part of a nine criteria screening process, the Intoxicated Driver Resource Centers (IDRCs) use a questionnaire consisting of three sections: 1) demographics; 2) a drug screen for lifetime, past year and past 30-day substance use; and 3) the Research Institute of Addictions Self Inventory (RIASI), a driving under the influence (DUI) offender screening instrument used by the State of New York's Special Traffic Options Program (STOP-DWI). The RIASI asks questions regarding family history, classic symptoms of alcohol abuse and dependence, interpersonal competence, alcohol expectancies, aggression/hostility, impulsivity/risk taking, psychological factors, and childhood risk factors. The questionnaire also includes questions regarding prior experience with treatment or self help groups, substance use frequency, binge drinking and personal perception of a problem. The score derived from this self-administered questionnaire is one of nine criteria used by the IDRCs to refer clients to treatment or self help.

From January 1, 2013 through December 31, 2013 the State of New Jersey's Intoxicated Driving Program (IDP) collected data from 20,416 DUI offenders who attended the 21 county and three regional facilities. The county (12-hour) IDRCs primarily detain, educate and screen offenders *sentenced* as first time DUI offenders; however, many of these may have more than one *lifetime* DUI offense, although sentenced as a first offender. Those sentenced as multiple offenders (three or more) also attend the 12-hour IDRC. The Regional (48-hour) IDRCs primarily detain offenders sentenced as second offenders, although many of these may be multiple lifetime DUI offenders. The following statistical report presents characteristics of IDRC clients who completed the evaluation and education portions of the IDRC program. There were 26,521 DUI arrests in 2012 (UCR, 2013); however, not all drivers arrested for a DUI are convicted. Although all convicted are required to attend the IDRC, not all follow through and attend the mandatory classes. If a convicted driver does not attend IDRC, they are not in compliance and will not get their driving privileges reinstated. The IDP received information on 23,283 convictions of Intoxicated Driving and Related Offenses from the New Jersey Administrative Office of the Courts in 2013. There were 24,544 clients scheduled to attend classes at an IDRC. The IDP does not conduct classes.

This report also includes data specifically regarding the 18-25 year-old and 16-20 year-old populations. DMHAS was awarded a Strategic Prevention Framework State Incentive Grant (SPF-SIG). The priority population for this project is 18-25 year-olds with a focus on reducing the harmful consequences of drinking. DMHAS is pursuing prevention strategies in the under 21 year-old population as well. Data related to those populations can be found in Appendix B of this report. Other age ranges in tables and charts have been kept the same to allow for trend information.

In this report, substance use characteristics of IDP clients are compared to those of the New Jersey adult population as a whole. Appendix A includes county-specific tables for lifetime illicit drug use, screening score cutoffs and self-help and treatment history by screening score cutoff. New Jersey relevant data were obtained from the 2012 US Census, US Census Bureau prepared by the New Jersey State Data Center, New Jersey Department of Labor. Other demographic information unavailable from the Census is taken from the 2009 New Jersey Household Survey on Drug Use and Health conducted by the New Jersey Department of Human Services, Division of Mental Health and Addiction Services. The latest available household survey was a telephone survey of the adult population in New Jersey conducted from October 2008 to May 2009.

GENERAL DEMOGRAPHICS

- The majority of IDP clients were male (75%).
- The majority of IDP clients were non-Hispanic white (59%), followed by Hispanic (24%) and non-Hispanic black (12%).
- Most were in their thirties, with an average age of 36 years. The ages ranged from 15 to 90, with peaks at 24 and 47 years of age. IDRC clients ranged in age from 15 to 90 years-old with a peak at 24 years of age. The mean age was 36 years-old (see Figure 1 (see Figure 1)).
- 30% have a high school education only and another 59% have completed some college or higher.
- 42% have an income of \$50,000 or over, while 32% have an income under \$25,000.

The most significant differences between IDP clients and the general population of New Jersey were:

- IDP clients were overwhelmingly male (75% vs. 48% of NJ Population-2012 Census).
- IDP clients were mostly single (59% vs. 32% of NJ Population-2012 Census).
- Over half of IDP clients were employed full-time (57% vs. 38% NJ Population-2012 Census).

*Population data from:

US Bureau of the Census (2012), Current Population Survey (CPS) Table Creator For the Annual Social and Economic Supplement denominator taken from census age 16 and above. http://www.census.gov/hhes/www/cps/cps_table_creator.html

2013 Age Distribution of IDRC Clients

ALCOHOL USE

- Compared to NJ Household Survey (HS) respondents, a higher proportion of IDP clients used alcohol in their lifetimes (96% vs. 87%) and in the past 12 months (86% vs. 69%).
- IDP clients reported usually consuming more drinks in one sitting than NJ householders.
- 44% of IDP clients vs. 18% of NJ householders usually drank 3-4 drinks at one time.
- 18% of IDP clients vs. 9% of NJ Household Survey respondents stated they usually have 5 or more drinks when consuming alcohol.

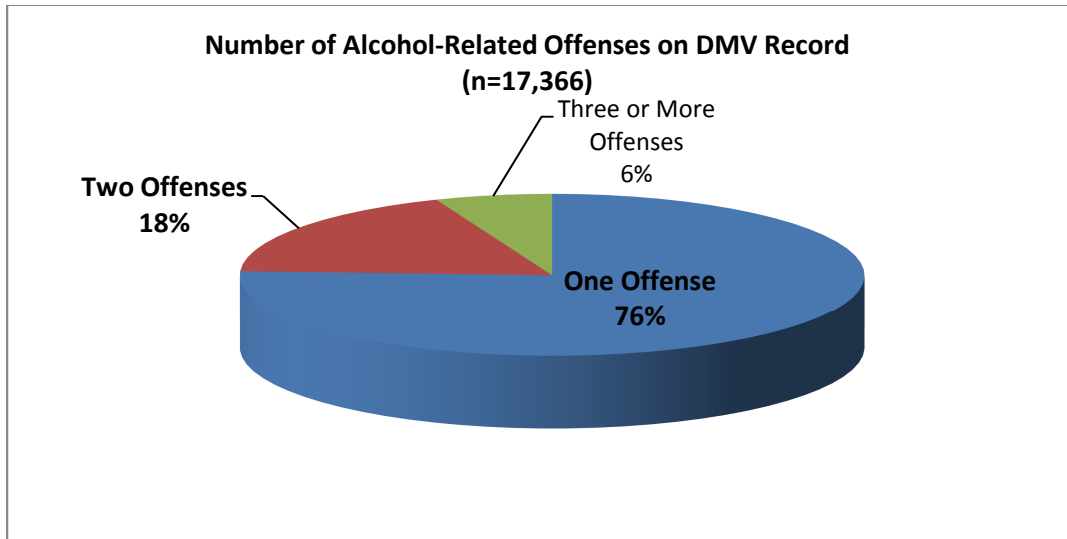

PLACE OF ALCOHOL CONSUMPTION

- 20% of IDP clients reported usually drinking alcohol at 2 or more places at times when they drink.

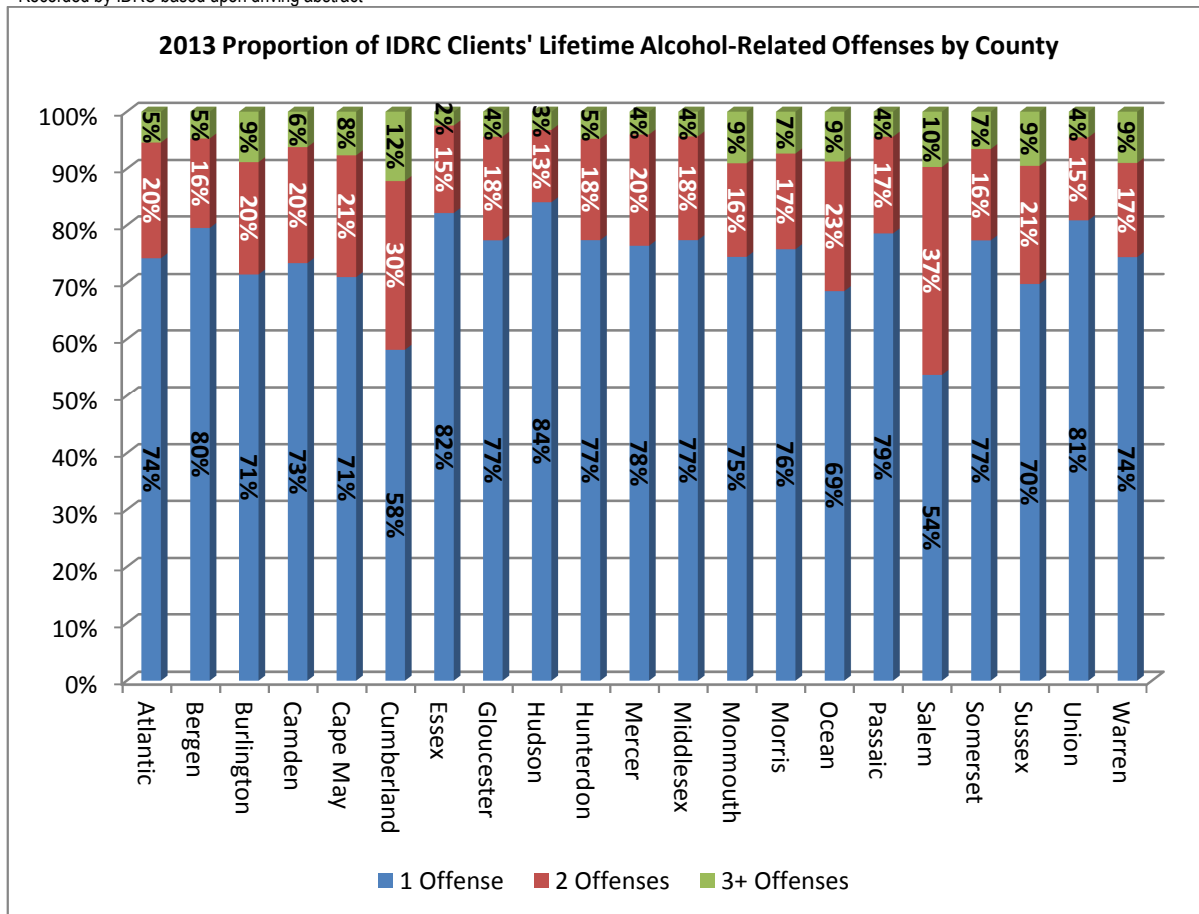

MOTOR VEHICLE OFFENSES/ARRESTS

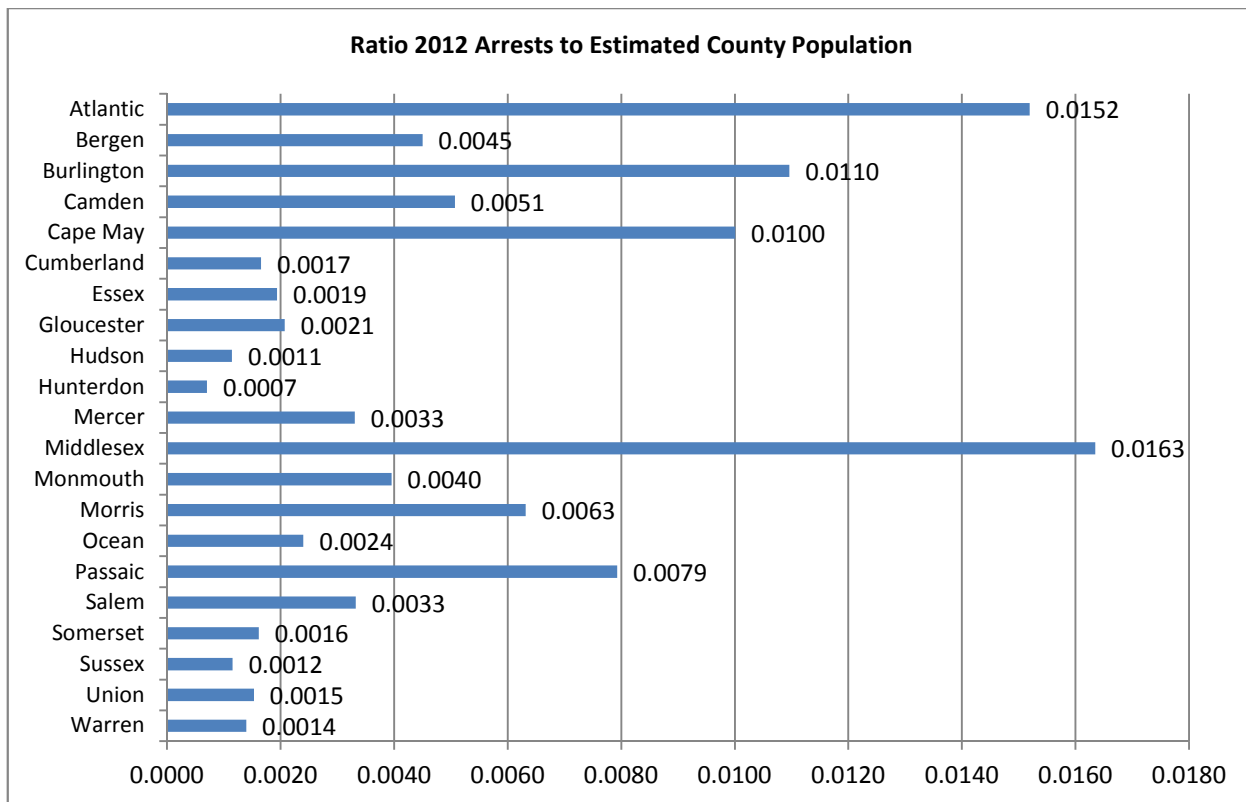

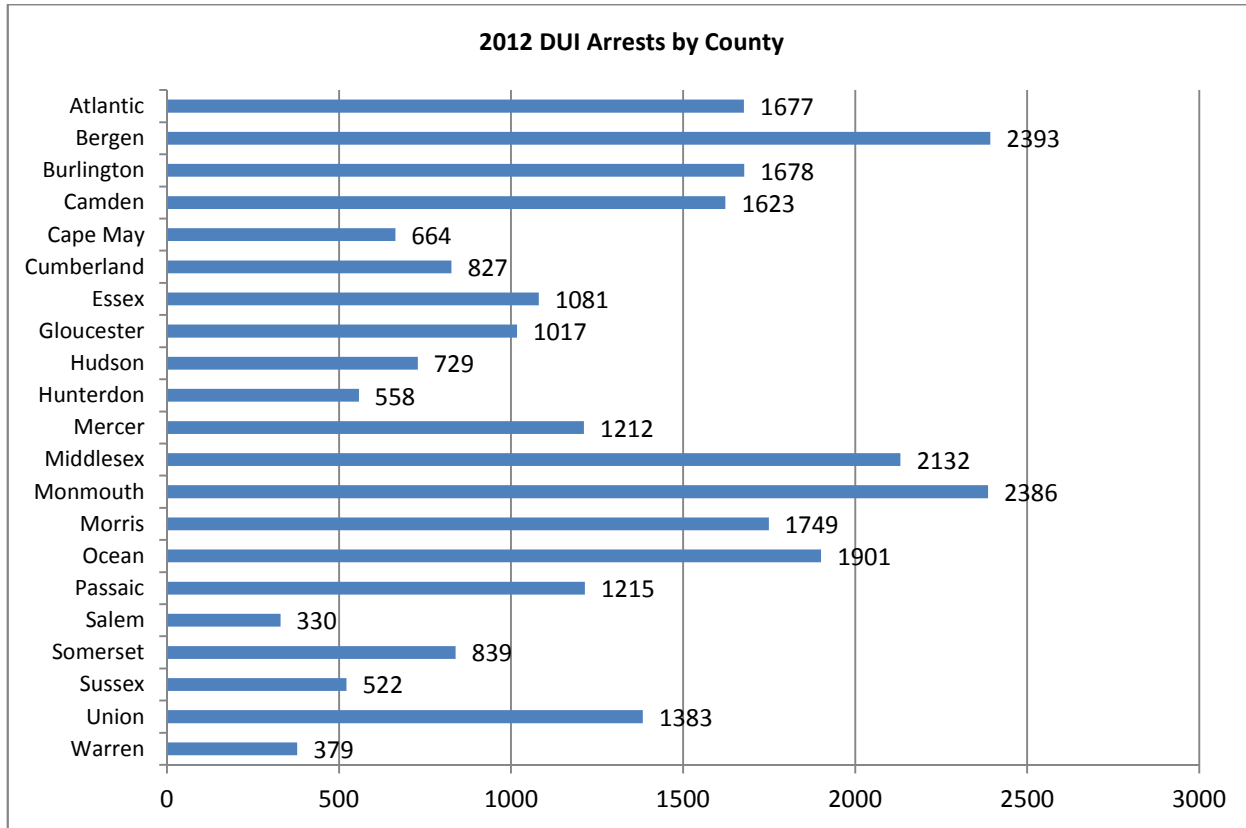

- Most (76%) of the IDP clients had only one lifetime alcohol-related offense on their motor vehicle records, 18% had two offenses, and 6% had three or more offenses.
- 12% of the Cumberland County offenders who attended IDRC in 2013 were multiple offenders (3 or more offenses) vs. only 2% of those who attended in Essex County with multiple offenses.
- The greatest numbers of DUI arrests in 2012 were in Bergen County (2,393).
- Middlesex County had the highest rate of DUI arrests in 2012 (0.0163); Hunterdon County had the lowest rate 0.007.

¹ Recorded by IDRC based upon driving abstract

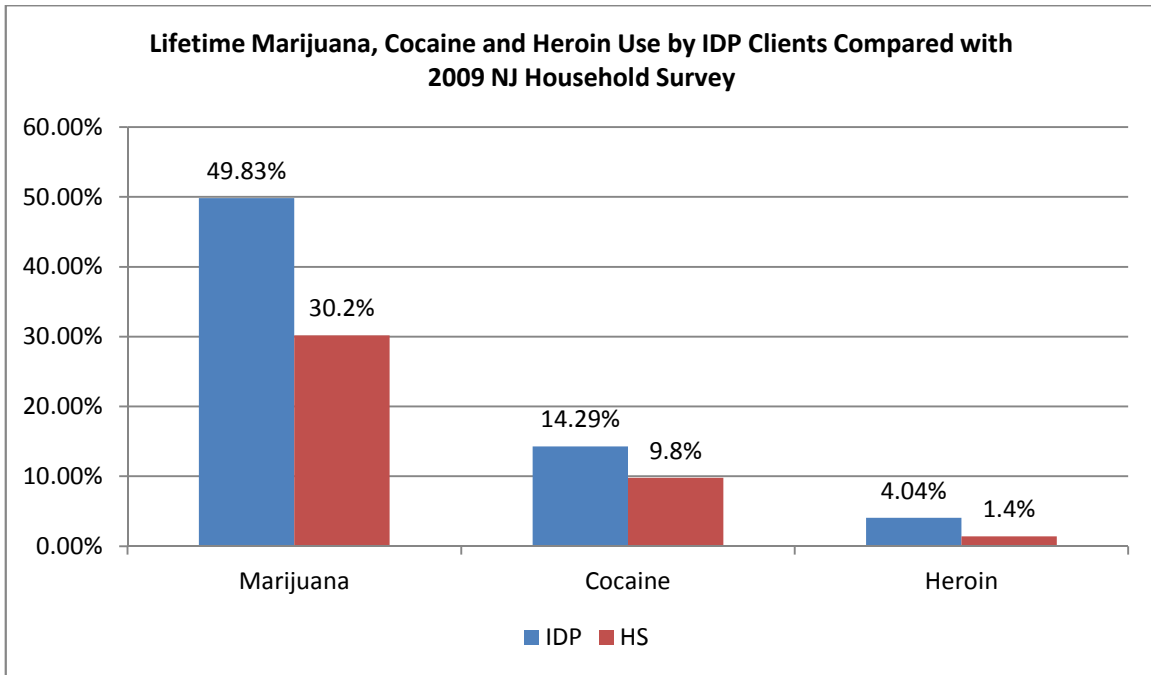

DUI ARRESTS 2012

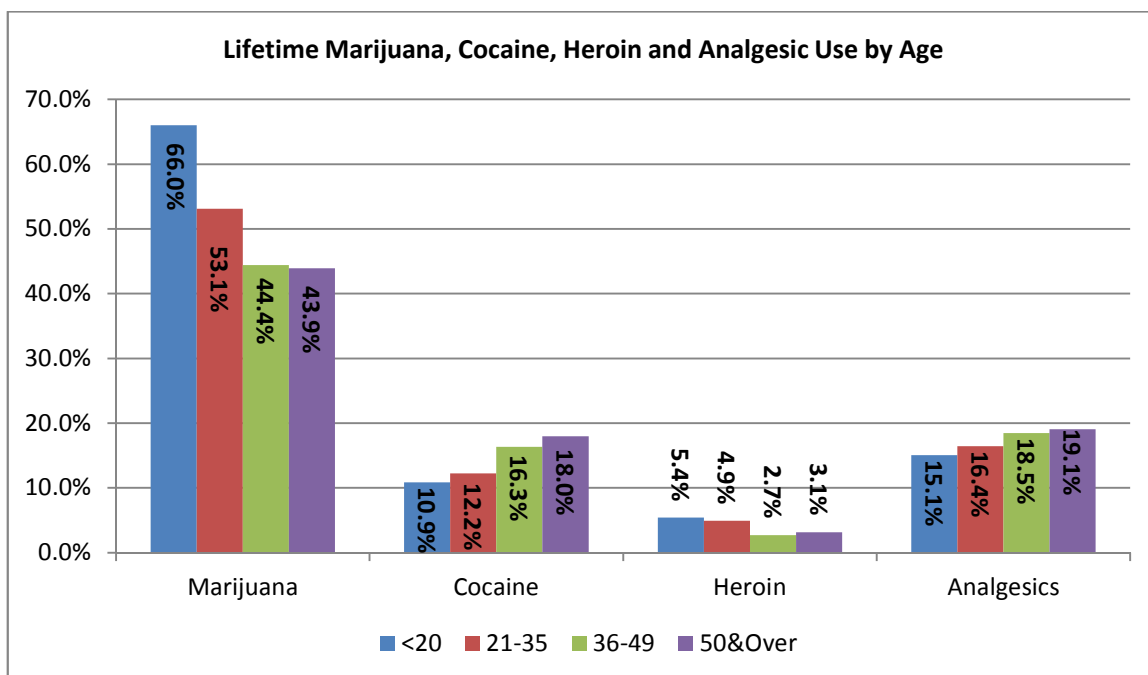

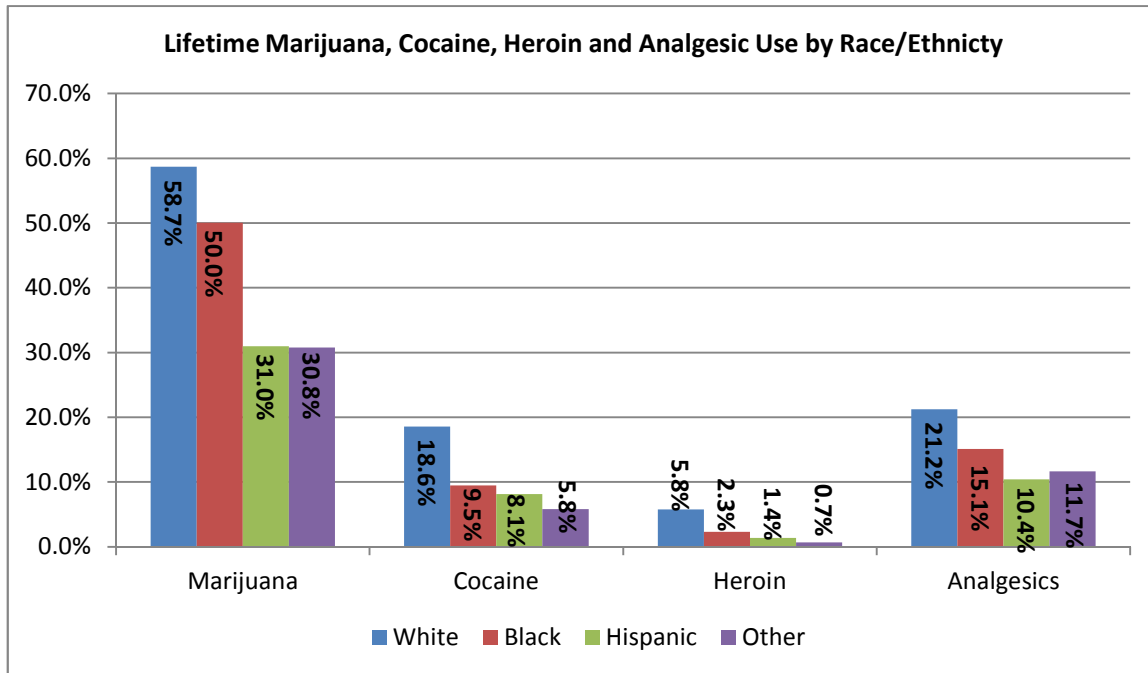

ILLCIT DRUG USE

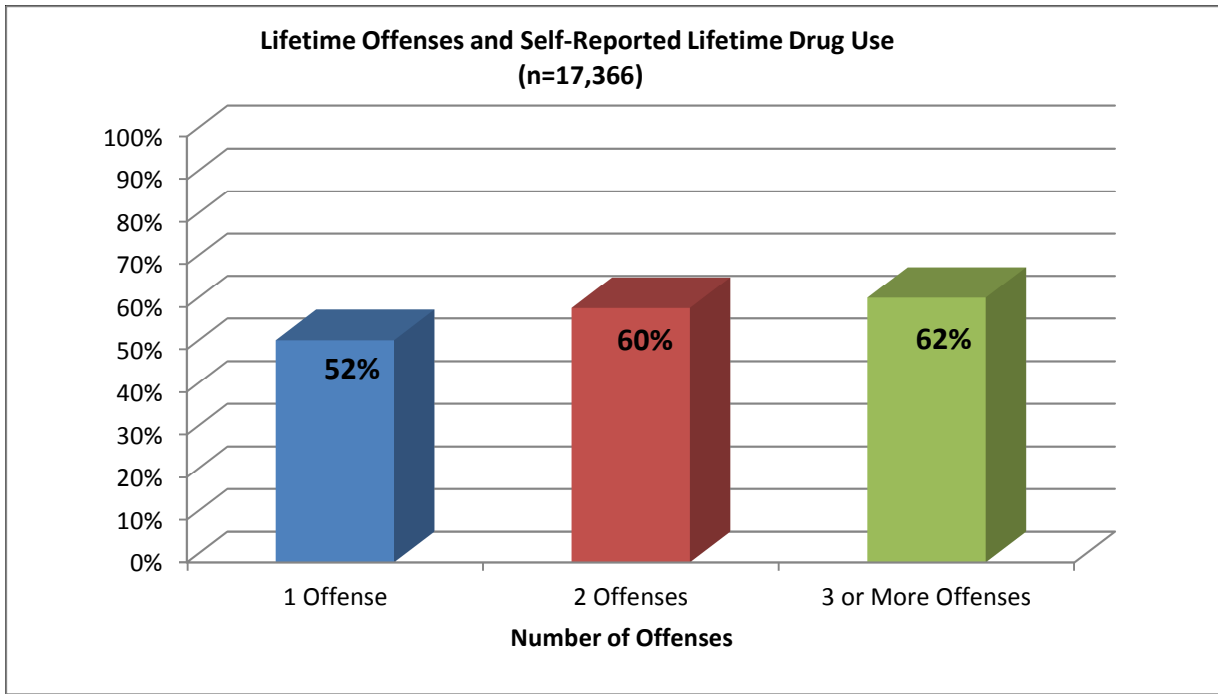

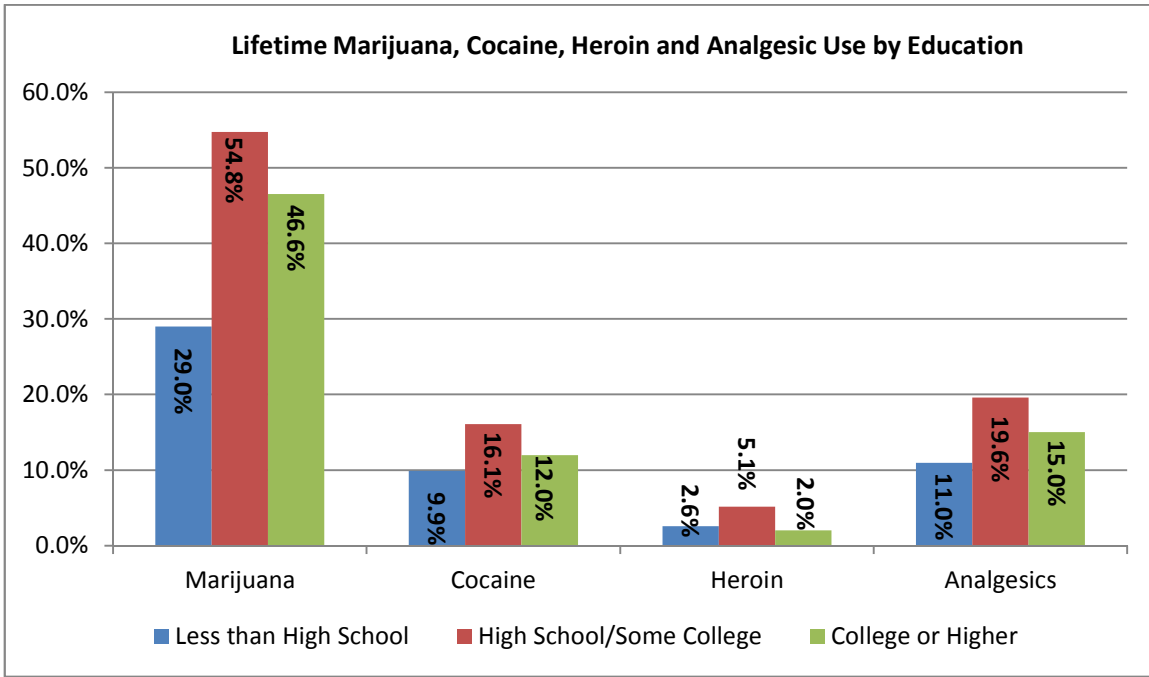

- Prevalence of lifetime use of marijuana, cocaine and heroin by IDP clients was almost double the levels reported by NJ Household Survey respondents.
- 50% of IDP clients reported lifetime marijuana use compared with 30% for adult NJ Household Survey respondents.
- 14% of IDP clients reported lifetime cocaine use compared to 10% for NJ Household Survey respondents.
- Male and Female clients reported similar lifetime marijuana use.
- Female clients reported slightly higher lifetime cocaine, heroin and analgesic use than male clients.

SOCIO-DEMOGRAPHIC CHARACTERISTICS OF ILLICIT DRUG USERS

- The proportion of white IDP clients with reported lifetime use of marijuana, cocaine and analgesics was greater than that of any other race/ethnicity category whereas Hispanic clients reported the lowest proportion of lifetime drug use.
- Younger clients (20 year-olds and younger) have higher lifetime prevalence of use for marijuana; however, lifetime cocaine use was the highest for those age 50 and older.
- The prevalence of lifetime marijuana, heroin, cocaine and analgesic use is highest for the population who completed high school and/or have some college-level education;
- Clients with two or more alcohol-related offenses had higher rates for lifetime drug use than those with one lifetime offense.

REFERRALS

- 48.5% of the IDRC clients had further requirements after the IDRC Class (either self-help, continue in treatment or referred for an assessment).
- 43% or 8,855 of all IDP clients had a referral for assessment/evaluation or self-help group after the IDRC class.
- Out of those referred, 90% were referred for an ASAM PPC-2-R Assessment and 4% had self-help referrals.
- 7% of the clients were currently enrolled in treatment or had completed treatment prior to attending the IDRC which would satisfy IDRC treatment requirements.

CRITERIA FOR REFERRAL

New Jersey regulations specify IDRC counselors use 9 criteria for referral for evaluation, treatment and/or self-help attendance.

1. A screening score of 9 or more on the self-administered questionnaire
2. A blood alcohol level (BAC) of .15% or more with other supporting data
3. Two or more alcohol or drug-related offenses on the client's motor vehicle record
4. Prior treatment for an alcohol or drug problem
5. Prior self-help group attendance for an alcohol or drug abuse problem
6. A poor driving record (accidents, reckless or careless driving, persistent moving or other motor vehicle violations)
7. Counselor interview and observations (symptoms of alcohol/drug abuse including voluntary admission by the client)
8. Outside information (client's family, treatment facilities, counselors or physicians)
9. Age¹

Overall referral rates by county were examined. The screening score, BAC level at or above .15%, and two or more lifetime alcohol-related offense criteria were studied to see how counties utilize these three criteria when determining treatment referrals for clients.

- Clients from Hudson, Essex, and Union Counties had the lowest referral rates (28%, 29% and 29%, respectively).
- Clients from Sussex, Ocean and Monmouth Counties had the highest referral rates (62%, 65% and 73%, respectively).
- Statewide, 81% of IDP clients with a Blood Alcohol Concentration of .15% or higher received a referral. The county-level proportions ranged from 44% to 100%. Those counties with the highest proportion were Bergen (99.7%), Atlantic (100%) and Passaic (100%); those with the lowest proportion were Essex (44%), Gloucester (57%) and Camden (58%).
- The proportion of clients with a reported screening score above the cutoff who received a referral ranged from 35% to 97% (the State percentage was 68%). The counties with the highest proportions were Somerset (79%), Ocean (81%) and Monmouth (97%); the lowest proportions were from Salem (35%), Hudson (38%), and Cumberland (38%).
- The proportion of clients with 2 or more lifetime alcohol-related offenses who received a referral did not vary as greatly as the Screening score criteria. These proportions ranged from 87% to 100% with a State percentage of 96%. The counties with the lowest proportions were Camden (87%), Essex (90%) Warren (91%); the highest proportions were in Monmouth (99.7%) and Hunterdon and Atlantic Counties, with 100%.

¹ There is no specific age indicated in the "Age" criteria in the Regulation; however, the "age" used is generally under 21

2013 IDRC Referral Rates by County
(n=18,249)

Percentage of 2013 IDRC Clients with a Blood Alcohol Level of .15% or Higher who Received a Referral, by County (n=3,504)

Percentage of 2013 IDRC Clients with a Screening Score Above the Cut-off Who Received a Referral, by County (n=7,269)

Percentage of 2013 IDRC Clients with Two or More Alcohol-Related Offenses on Their Motor Vehicle Record who Received a Referral, by County (n=4,173)

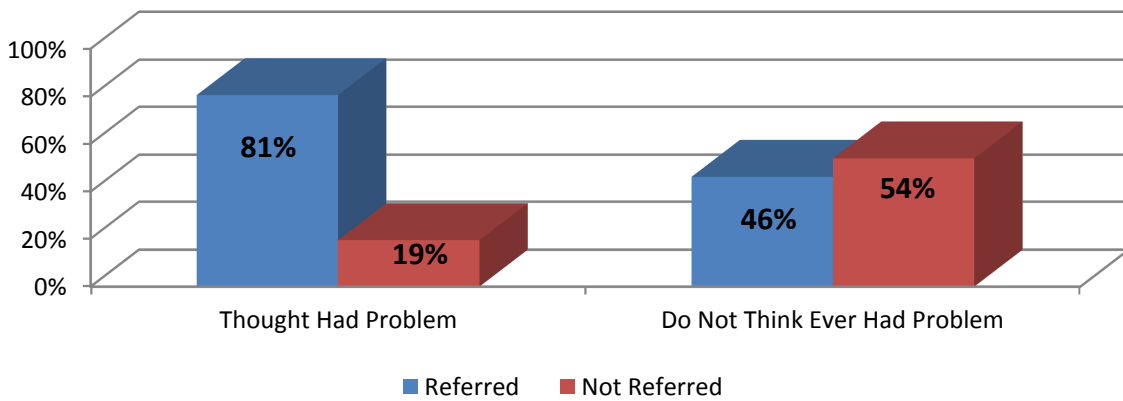

CHARACTERISTICS OF REFERRED CLIENTS

- Those with their highest level of education being high school degree were 14% more likely to be referred to treatment than those with a college degree (40% for college or higher vs. 54% for those with a high school diploma).
- There was a large difference in referral rate between clients who themselves thought they ever had a problem with alcohol use (78%) and those who thought they do not have a problem (42%).
- For those clients who received a referral, 19% reported annual incomes under \$25,000 and 41% reported having an annual income over \$50,000.
- Those clients reporting any Narcotics Anonymous attendance have the highest percentage of those with a screening score above the cutoff (77%). Ninety-six percent of those currently attending Alcoholics Anonymous received a referral beyond the IDRC class.

Distribution of Clients Referred by Clients' Belief that They Ever Had a Problem with Drugs (n=17,317)

Referral by Income Level (n=16,536)

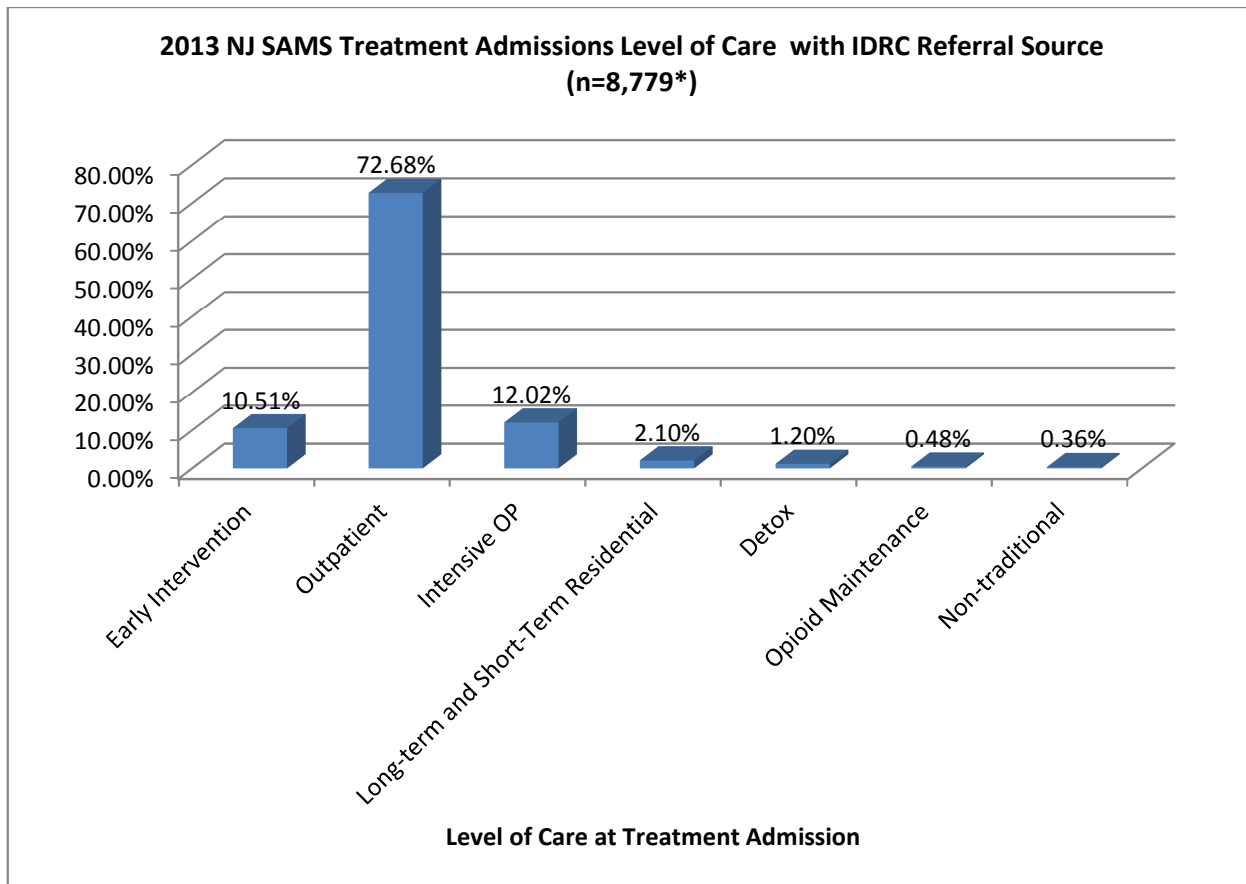

IDP Clients' Treatment/Self-Help History by Screening Score and Referral Status

Treatment/Self-Help History	N	% Clients with Treatment or Self-Help History who Scored 9 or more	N	% Clients with Treatment or Self-Help History who received a Referral
AA in Lifetime	4351	64.11	3686	93.41
Currently in AA	1895	65.48	1624	95.81
NA Lifetime	2086	77.30	1720	93.87

Treatment in Lifetime	3376	66.13	2852	96.13
Currently in Treatment	936	69.01	797	98.59

Clients' Status After IDRC Referral to Treatment

In 2013, there were 8,779 treatment admissions entered into the NJSAMS with an IDRC Referral Source indicated. Of these,

- The majority were admitted into outpatient (72.7%) followed by Intensive Outpatient programs. 10.5% had an Early Intervention program admission.
- 2.1% were admitted into a residential program.
- 65% successfully completed treatment
- 29% were discharged without successfully completing treatment

APPENDIX B

18-25 and 16-20 Year-Old Population Tables

Number of Drinks Usually Consumed by all IDP Clients Compared with 16-20 Year-Old IDP Clients and 18-25 Year-Old IDP Clients

Number of Offenses on DMV Record of all IDP Clients Compared with 16-20 Year-Old IDP Clients and 18-25 Year-Old IDP Clients

Self-Reported Lifetime Marijuana, Cocaine and Herion Use of All IDP Clients Compared with 18-20 Year-Old IDP Clients and 18-25 Year-Old IDP Clients

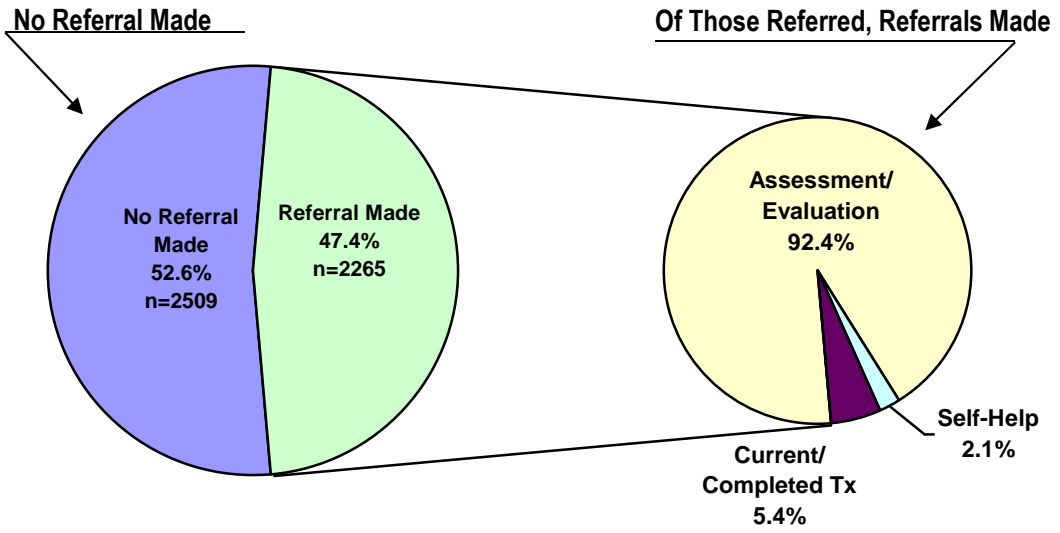

Lifetime Marijuana, Cocaine, Heroin and Analgesic Use by 18-25 Year-Old IDP Clients, by Gender

Lifetime Marijuana, Cocaine, Heroin and Analgesic Use by 16-20 Year-Old IDP Clients, by Gender

Referrals of the 2013 18-25 Year-Old IDP Clients

Referrals of the 2013 16-20 Year-Old IDP Clients

Number of 2013 IDP Clients Attending IDRC by County of Residence with 16-20 Age Group Percentage			
County	Total Number of IDP Clients	Number of 16-20 Year-Old Clients	Percentage of 16-20 Year-Old clients
Atlantic	707	33	4.7%
Bergen	1536	88	5.7%

APPENDIX C

TERMS

Intoxicated Driver Program (IDP): The state agency under the New Jersey Department of Human Services, Division of Mental Health and Addiction Services that coordinates the scheduling and collection of client data for convicted driving under the influence (DUI) drivers in New Jersey. IDP schedules clients for the 12-or 48-Hour IDRC Programs and notifies Motor Vehicle Services (MVS) when clients have completed or failed to comply.

Intoxicated Driver Resource Centers (IDRCs): These are 21 county-level centers and 3 regional centers which have two purposes: (1) to make our highways and waterways safer by educating drivers and boat operators about alcohol, drugs and their relation to motor vehicle and boating safety, and (2) to identify and treat those who need treatment for an alcohol or drug problem. The client may be referred to a treatment program or self-help group following evaluation. If there was a referral to treatment, it was for a minimum of 16 weeks. The IDRC may require monitored treatment or self-help group attendance for a maximum of one year. The client must complete treatment as part of the sentence.

RIASI Screening Score (Research Institute on Addictions Self Inventory): A DUI offender screening instrument created for and used by the State of New York in its Stop DWI Programs. Included are 41 True/False questions and 8 multiple response questions, each worth 1 point each. The questions cover several factors of substance dependence: classic symptoms, family history, risk-taking behavior, psychological factors, interpersonal competence, health, and alcohol beliefs. It was considered a positive screen if the client scores a 9 or above.

New Jersey Household Survey: A survey conducted by the New Jersey Department Human Services, Division of Mental Health & Addiction Services entitled "The 2009 New Jersey Household Survey on Drug Use and Health." It was a telephone household survey used to assess substance use and treatment needs of the adult population in New Jersey.
