Governor

DEBORAH T. PORITZ

Attorney General

COLONEL CARL A. WILLIAMS

Superintendent

Telephone: (609) 882-2000

Fax: (609) 882-6920

Dear Reader:

Over the years New Jersey has consistently been ranked as one of the safest states in the nation and 1994 is no exception. After showing a modest increase in fatalities in 1993, New Jersey emerged in 1994 with the lowest number of fatalities since records have been kept. Record lows for fatalities have been achieved in two out of the last three years.

Once again we believe our success can be attributed to aggressive D.W.I. enforcement, alcohol awareness programs, proactive holiday programs, safety belt use and retaining the 55 M.P.H. speed limit. A cooperative effort that includes law enforcement, highway traffic safety organizations, private corporations and the motoring public has made these initiatives work in reducing the number of deaths on our highways.

In spite of continued reductions in the number of fatalities nationwide, motor vehicle accidents continue to be the leading cause of death for people between the ages of 6 and 28 years old. The nationwide death total of 40,676 people represents an average of 111 deaths per day and an annual cost of over 137 billion dollars.

The information contained in this report provides a detailed look into the causes and results of all fatal accidents in the state during 1994. Hopefully, analysis of this information will aid in reducing the number of fatal accidents occurring in future years.

It is essential that the law enforcement community stand united in their commitment to the 55 M.P.H. speed limit, D.W.I. enforcement programs and the use of safety belts. Past efforts in these areas have proven to save lives.

On the following pages you will find statistics of fatal traffic accident records compiled by the Fatal Accident Investigation Unit of the Division of State Police for 1994. It is my hope, that one day, the suffering reflected in these statistics can be eliminated.

Sincerely.

Carl A. Williams

Colonel

Superintendent

QUICK FACTS

- Nationwide, the fatality rate reached a historic low of 1.7 fatalities per hundred million vehicle miles traveled.
- Nationwide preliminary statistics indicate there were 40,676 people killed.
- In New Jersey there were 691 fatal accidents with 761 people killed.
- There was a decrease of 30 fatal accidents and a decrease of 28 fatalities.
- Of the fatalities, 33.7% had consumed alcohol to some extent.
- Of all drivers, 13.9% were legally intoxicated.
- An average of 2.09 persons were killed every day.
- There were 35 motorcycles involved in fatal accidents.
- Pedalcyclists accounted for 19 fatal accidents.
- The pedestrian death toll was 168.
- There was a total of 30 hit-and-run fatal accidents involving 37 vehicles. The victims comprised 3 drivers, 5 passengers, 23 pedestrians, and 1 pedalcyclist.
- Of the 1,039 drivers listed, 50 New Jersey drivers and 4 out-of-state drivers were suspended. There were 20 drivers without valid licenses.
- There are 35,431 miles of open public roads in the state of New Jersey, indicating one death for every 46.4 miles.
- Straight roads were involved in 54.8% of all fatal accidents.
- Of all fatal accidents, 84.7% occurred during clear weather conditions.
- Of the known drivers involved in fatal accidents, 70.9% were males.
- Of the vehicles involved in fatal accidents, 74.0% involved passenger cars and 18.9% involved trucks.
- There were 49 tractor-trailers involved in 45 fatal accidents which resulted in 55 fatalities.

20 YEAR TREND

Intoxicated Drivers Involved in Fatal Accidents

M. ALCOHOL FACTOR

There were 761 fatalities during 1994. Of this total 612 were tested for alcohol and 149 were not tested. Of the fatalities, 379 were drivers, 197 were passengers, 168 were pedestrians and 19 were pedalcyclists. Of the 614 tested, 207 were positive for alcohol in varying degrees and 400 were negative. This indicates that 33.7% of the fatalities tested were positive for alcohol and 65.2% were negative. Four drivers and three pedestrians tested positive for drugs.

In 158 of the 691 accidents, Driving While Intoxicated was listed as the major contributing factor. There were 171 people killed as a result of these 158 accidents.

- 1.) **Drivers:** There were a total of 379 drivers killed of which 327 were tested. Of those tested, 126 were positive and 201 were negative, indicating 38.5% had consumed an alcoholic beverage. Of the 126 imbibing drivers, 102 or 80.9% had an alcohol level of .10% or higher.
 - **Surviving:** There were a total of 660 surviving drivers of which 179 were tested. Of those, 57 were positive and 122 were negative, indicating 31.8% had consumed an alcoholic beverage. Of the 57 imbibing drivers, 42 or 73.6% had an alcohol level of .10% or higher. Five surviving drivers tested positive for drugs.
- 2.) **Passengers:** There were a total of 195 passengers killed of which 137 were tested. Of those tested, 31 were positive and 106 negative, indicating 23.0% had consumed an alcoholic beverage.
- 3.) **Pedestrians:** There were a total of 168 pedestrians killed of which 134 were tested. Of those tested, 49 were positive and 85 were negative for an alcohol factor of 36.6%.
- 4.) **Pedalcyclists:** There were a total of 19 pedalcyclists killed of which 14 were tested. Of those tested, 7 were positive and 7 were negative, indicating that 50.0% had consumed an alcoholic beverage.

SURVIVING DRIVER ALCOHOL FACTORS

	.0104%	.0509%	.1014%	.15 & over	Negative	No Test	Total
Drivers	7	8	15	27	122	474	653

NOTE: Five surviving drivers also tested positive for drugs and two surviving drivers were listed as "Had been drinking".

EVALUATION:

An analysis of deceased drivers in the above .10% BAC categories continued to show a decrease over a five-year period. During the five-year period from 1990 to 1994, the number of deceased drivers above .10% decreased 9%. A review of surviving drivers during the same time period also continued to show a downtrend. In the above .10% BAC categories, a decrease of 32.2% was noted. It is important to note that as each progressive year of low alcohol involvement is factored in, a smaller decrease is acquired.

Had been drinking: includes those delayed deaths where an odor of alcohol was detected. Includes admittance of victim (in delayed death) or statements of witnesses. LEGEND:

includes lab reports which show a trace and not a percentage, or reading blow 0.01%.

Tested and found to be negative.

Because of delayed death, age factor, contamination of samples, and the failure on the part of some investigative agencies and medical examiners to cause test to Negative: No Test:

be performed on victims.

Four drivers and 3 pedestrians tested positive for drugs. NOTE:

SPECIFIC AREAS OF CONCERN INTERSTATE HIGHWAY FATALITIES

The Interstate Highway System of New Jersey is approximately 98.6% completed. Of the 421.21 miles of roadway which are projected for this system, 415.42 miles have been opened to the motoring public. During 1994, the death rate averaged 3.0 deaths per month and one death for every 11.2 miles of highway. A concise analysis of victim classification, alcohol involvement, driver ages, contributing circumstances and manner of collision is outlined on the following page.

INTERSTATE HIGHWAY MILEAGE

ALCOHOL INVOLVEMENT

Of the nineteen pedalcyclist fatalities, 14 were tested for alcohol content. Seven pedalcyclists had alcohol contents of: .281%, .263%, .206%, .178%, .166% and .016%. Seven pedalcyclists were tested and returned negative. The remaining five pedalcyclists were not tested due to age factors, delayed deaths and various other reasons.
