# **New Jersey 1995 Developed Land Update**

## **Purpose**

The goal of this project was to produce initial estimates and maps of land developed in New Jersey between 1986 to 1995 using digital geographic data that had very recently become available. This analysis was intended to update a similar analysis derived from 1986 Land Use/Land Cover data and 1991 Federal and State Open Space data. The update was performed by the Office of State Planning staff through on-screen digitizing using 1995/97 digital orthophotos (made available from the New Jersey Department of Environmental Protection in the summer and autumn of 1998) or 1994/95 satellite imagery (see Map 1). The Office received updated Federal and State Open Space data from the New Jersey Department of Environmental Protection and GIS data of permanently preserved farmland from the New Jersey State Agricultural Development Committee in October 1998 that were also used in this analysis. The analysis resulted in 21 county-wide geographic information system (GIS) digital files, or "coverages." The data presented in this report was derived from these coverages.

The maps and estimates produced in this project were used to inform the Office of State Planning and the State Planning Commission in preparing the 1999 Interim State Development and Redevelopment Plan. While useful, the estimates in this report are considered interim products, however. First, the delineation of Planning Areas will be different when the State Development and Redevelopment Plan is readopted as a result of changes to be negotiated in the cross-acceptance process. Concurrently, the New Jersey Department of Environmental Protection (NJDEP) has initiated a much more detailed analysis (using the Modified Anderson Level II/III classification scheme) using an outside consultant to update the 1986 Land Use/Land Cover data with the 1995/97 imagery. The NJDEP's project is expected to be completed by 2001. When this latter project is complete, the Office of State Planning will publish new estimates and maps.

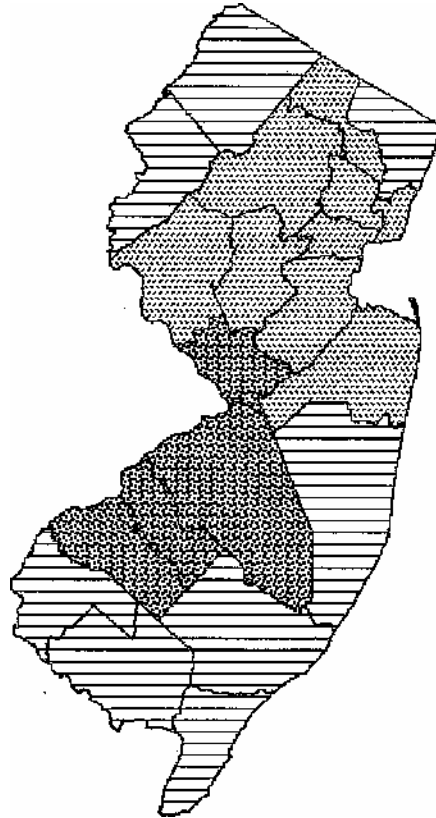

## **Project Methodology and Data Sources**

Data for this project came from three different sources, depending on the county:

- 1) The New Jersey Office of State Planning (NJOSP) performed the update for Atlantic, Bergen, Cape May, Cumberland, Ocean, Salem, Sussex, Warren and the southern edge of Monmouth counties.
- 2) The Delaware Valley Regional Planning Commission (DVRPC) provided GIS data for Burlington, Camden, Gloucester, and Mercer counties.
- 3) The New Jersey Department of Environmental Protection (NJDEP), Endangered and Non-Game Species Program, provided GIS data for Essex, Hudson, Hunterdon, Middlesex, Morris, Passaic, Somerset, Union, and most of Monmouth counties (under the "Landscape Project").

# Map 1

## Data Sources for the Developed Land Update (1986 to 1995)

**Source**

-  DVRPC 1995 aerial photography
-  NJDEP/RU 1994/95 satellite imagery
-  NJDSP 1995/97 digital orthophotography

## ***Non Office of State Planning Data Sources***

Some anomalies occur as a result of using automated GIS processes to analyze completed county data from other sources. In the case of the DVRPC data, we used mapping that was created at a much larger scale. This resulted in many slivers of developed land being created along the edges of older developed land. This land area would not have been counted as new development under a more detailed study. This tended to create a slight overestimate of newly developed land. In the case of the NJDEP data, two things were happening. First, many smaller, newly developed areas were missed due to the large cell-size used in the interpretation. Second, edges of cells labeled as developed, although not entirely developed, were counted as new development. The effect of these differences needs to be examined further.

## ***Procedures Used for the Counties Processed by NJOSP***

For this project, NJDEP's 1986 Land Use/Land Cover GIS coverages were used as a starting point. The following land use codes were considered "available" for development:

Land Use	NJDEP Land Use/ Land Cover Codes
Agriculture	2000-2999
Forest	4000-4999
Barren Land	7200, 7580, 7600

All other land cover types were considered not available for development. All polygons from the NJDEP's 1998 Federal and State Open Space coverage were also coded as not available for development. As such, only the available lands were reviewed for new development.

From this starting point, boundaries of newly developed areas were digitized on-screen using the 1995/1997 color infrared digital orthophoto imagery (1 meter resolution) provided by NJDEP at a map scale of 1:5000. Delineations usually followed visible boundaries, (e.g., roads, lawns, hedgerows). Parking lots and smaller areas of water were delineated as developed land, since these areas are not available for new development. Areas under construction were not delineated if there were no buildings present. The minimum mapping unit (*mmu*) used for urban and suburban areas was approximately 2.5 acres. For rural areas the *mmu* was 1 acre.

## ***Procedures Used on the Data Provided by NJDEP, Endangered and Non-Game Species Program***

The NJDEP data, developed by Rutgers University, was derived from 1994/1995 Landsat Thematic Mapper satellite imagery, with a 30 meter grid-cell size. Newly developed land was mapped using a raster based program (Imagine). Thus, the resolution is very coarse in comparison with the areas covered by NJOSP and DVRPC. The following steps were taken by NJOSP once the data were provided by NJDEP:

1. The original grid file was converted to a polygon coverage.
2. Individual counties were separated out.
3. The following attributes were coded as available for development:

Land Use	NJDEP, Landscape Project Code
Cultivated	20
Grassland	30
Forest	40
Barren	50

4. This recoded file was then combined with the 1986 available land coverages so that new developed land could be distinguished from developed land that existed in 1986. As such, only the available lands were reviewed for new development.
5. Because these processing steps produced a substantial number of spurious polygons, all polygons less than 1 grid-cell in area (30m x 30m = 98.4 ft x 94.4 ft = .2 acres) were eliminated.
6. The resulting coverages were used in the computation of newly developed acres.

## ***Procedures Used on the Data Provided by DVRPC***

This data was derived from DVRPC's 1995 1:4800 (1 inch - 400 feet) scale aerial photography. The following attributes were coded as available for development:

Land Use	DVRPC Land Use Code
Agriculture	10
Wooded	12
Vacant	1201

Once these files were recoded, they were combined with the 1986 available land coverages so that new developed land could be distinguished from developed land that existed in 1986.

The final GIS coverages contain the following attributes which can be used to produce maps of available land and land developed since 1986:

Attribute	Codes	Explanation
"Avail"	N	Land not available for development (i.e., already developed as of 1986, or preserved as of 1998)
	Y	Land available for development
"Newdev"	1	Developed land and land not available for development, as of 1986
	2	New developed land, from 1986 up to 1995/1997
	3	Newly created polygon of undeveloped land surrounded by developed land, not likely to be developed due to size and/or location
	4	Old polygon of undeveloped land surrounded by developed land, not likely to be developed due to size and/or location (i.e., edges of roads; remote, dry land in the middle of wetlands)
	5	Undeveloped land

## Acknowledgements

The Office of State Planning expresses its appreciation to Larry Niles and Jim Myers of NJDEP, Endangered and Nongame Species Program, to Larry Thornton and John Tyrawski of NJDEP, Bureau of Geographic Information and Analysis, to Tom Wells and Bob Stokes of NJDEP, Green Acres Program, to Greg Romano and Rob Baumley of the New Jersey Department of Agriculture, State Agricultural Development Committee, and to Mike Ontko of DVRPC for providing data for this project.
