The Department maintains an inventory that records the vertical under-clearance of all structures (bridges and overhead signs). It is important to ensure that the minimum under-clearances are obtained to keep vehicles from hitting our structures, but it is also important to ensure that the Department has an accurate record of vertical under-clearances, because this information is used to direct over-sized vehicles along the highway system. Similarly, information about lane width restrictions for single-lane-each-direction highways is also used to direct over-sized vehicles.

For this purpose, the following procedure is provided:

I Vertical Under-clearance

A. Pre-Construction Review

1) The RE will review the project plans to determine if the project will reduce the vertical under-clearance (VUC) of a roadway by more than 6” for structures having an existing VUC of more than 15'-0", or more than 3" for structures having an existing VUC of less than 15'-0”. The RE should be able to obtain this information from simply reviewing the plans. It is not intended for the RE to verify existing clearances. The RE should consider the following:

   i. Are new structures (bridges or overhead signs) being constructed that will result in a VUC where none existed previously?
   
   ii. Are changes planned to existing structures that will change the VUC? (e.g. changes in the height of a structure, adding a new sign)
   
   iii. Are there changes to the road grade that will affect the VUC of a structure overhead?
   
   iv. Are there changes in VUC due to temporary structures?
   
   v. Are there changes in staging of shifting of traffic lanes that change the VUC?
   
   vi. Do any of the structures have VUC that are less than the posted clearance or less than 14'-6”?

NOTE: N.J.S.A. 27:5G-1 through 4, requires that every road having a VUC of less than 14'-6” have a minimum clearance marked or posted on the structures and at the last safe exit or detour preceding the structure. All bridges over State owned roadways with a minimum vertical clearance of less than 14'-9” shall also be posted. If changes result in a VUC of less than 14'-6” to a lane opened to traffic, the RE will ensure that appropriate signs are posted. In addition, if there are any changes to the VUC for a structure with existing reduced minimum clearance signs, the RE will ensure that the signs are appropriately changed.
B. Changes during Construction

1) If construction will reduce an existing VUC by more than 6" for structures having an existing VUC of more than 15'-0", or more than 3" for structures having an existing VUC of less than 15'-0", the RE will notify the Traffic Impact Coordinator (TIC) via e-mail at TIC@dot.nj.gov prior to performing the work. If the work is specific to a certain stage, the RE will notify the TIC of the planned change to the VUC with the Advance Traffic Impact Notice Form TO-103 for that stage. If the change is not specific to a particular stage, the RE will notify the TIC of the planned change to VUC with the Advance Traffic Impact Notice Form TO-103 at the start of the project.

2) If new structures (temporary or permanent) are constructed, prior to opening the roadway to traffic, the RE will notify the TIC via e-mail that new VUC’s are established. If the structure is being constructed over roadways open to traffic, the RE will notify the TIC of the planned VUC prior to performing the work.

3) The RE will also notify the PM and the Designer via e-mail of any change to any VUC and the FHWA Area Engineer via e-mail of any change to any VUC over an interstate roadway.

When notifying the TIC of a change in VUC via the Advance Traffic Impact Notice Form TO-103, provide the following information:

i. Project Name
ii. Structure(s) description
iii. Structure(s) number
iv. Roadway with changed VUC
v. Direction of Roadway (e.g. NB, SB, NB & SB …)
vi. Description of the reduction in the VUC (Provide this information in the Anticipated Traffic Impacts section)

Provide this same information when notifying the PM, the Designer and the FHWA Area Engineer.

NOTE: Construction operations may affect the VUC of a structure several times during a project. Notices of changes in VUC during construction are not required every time a beam is placed, or a section of roadway is milled or paved. Rather, a single notice is requested for the project, unless the change is stage specific.

C. Measuring VUC

1) The RE will obtain VUC measurements during stage construction to avoid having additional lane closures for this sole purpose.

2) Measurements of VUC are to be made to the nearest 1/10 of a LF, and taken at each lane line, shoulder line, and curb line/edge of pavement line beneath the structure. For Bridge structures, measurements must be taken beneath each fascia beam.
D. As-built of VUC - Vertical Under-clearance Report

1) For all projects that have structures having a change in the VUC (even when less than 6”), after the completion of the project, the RE will submit a Vertical Underclearance As-Built Report, Form **DC-31** to Structural Evaluation and Freight Services via e-mail to Structural.Evaluation@dot.nj.gov and Superload.Permits@dot.nj.gov. See Sample DC-31 form (Attachment A) also attached.

2) Thus, the report is required, whenever paving under a structure or placing new beams or overhead signs.

3) The RE will provide a sketch detailing the road configuration, lane numbering and locations of measurement with the Vertical Underclearance As-Built Report.

II Lane Width Restrictions

A. Changes during Construction

1) If construction will reduce the number of available lanes to one lane in any direction, or if it will reduce the lane width of an existing one lane each direction highway, the RE will notify the TIC via e-mail prior to performing the work. If the work is specific to a certain stage, the RE will notify the TIC of the planned lane width restriction with the Advanced Traffic Impact Notice Form TO-103 for that stage. If the change is not specific to a particular stage, the RE will notify the TIC of the planned change to lane widths with the Advanced Traffic Impact Notice Form TO-103 at the start of the project.

When notifying the TIC of a change in a lane width restriction, provide the following information:

i. Project Name
ii. Roadway/ Direction of Roadway (e.g. NB, SB, NB & SB …)
iii. Mile post limits of lane width restriction
iv. Description of the reduction in number of lanes or lane width. Include lane width and shoulder width (Provide this information in the Anticipated Traffic Impacts section)

When a lane width restriction is removed, notify the TIC via e-mail at TIC@dot.nj.gov of the change.

**NOTE:** Notices of lane width restrictions are not required for every temporary lane closure. Rather, a single notice is requested for the project, unless the change is stage specific.
## Vertical Underclearance As-Built Report

**Project Name:** Rt. 80 Roadway Improvements Contract "B"

**DP File No.:** 10565

**Prepared By:** [Name]

**Date:** 6/12/2010

**Resident Engineer:** [Name]

**Phone No.:** 609-530-0001
