## HIGHER EDUCATION

### **Overview**

The New Jersey system of higher education is committed to enabling all people to achieve their maximum potential, fostering democratic principles, improving the quality of life, and supporting the State's success in a global economy. By placing teaching and learning at the core of its mission, the higher education system in New Jersey prepares individuals for fulfilling lives, rewarding careers, and lifelong learning; through research, colleges and universities enhance teaching and learning, increase knowledge, improve the human condition, and enhance the economy. Many institutions also provide community service, work with local schools and organizations, sponsor recreational and cultural events, and offer technical assistance to small businesses.

In addition to promoting personal and intellectual growth, the higher education system bestows economic benefits to the State. By providing an educated and skilled workforce, developing new technologies through research, and devising new partnerships with private enterprise, the system attracts new businesses, creates jobs, and promotes economic growth. New Jersey has more scientists and engineers per capita than any other state and is an international leader in corporate research and development. Overall, the State has a higher than average number of executives, administrators and managers, and a lower than average concentration of workers in service occupations.

### **The Higher Education Restructuring Act of 1994**

The Higher Education Restructuring Act of 1994 created the current system of higher education in New Jersey. It is a tripartite structure consisting of the Commission on Higher Education, the New Jersey Presidents' Council, and the higher education institutions.

### **The Commission on Higher Education**

The purpose of the Commission on Higher Education is to coordinate, plan, and develop policy, and serve as an advocate for the State's higher education system in concert with the New Jersey Presidents' Council. The Commission conducts research and coordinates statewide accountability efforts to provide data and programs on higher education performance, programs, and initiatives. This enhances the capacity and competitiveness of the institutions, increases access to higher education for all socio-economic groups, and improves linkages between secondary schools, higher education facilities, and two-year community colleges.

### **The Presidents' Council**

The Presidents' Council is an advisory body composed of the presidents of all public colleges and universities and those independent institutions that receive State aid. The Council makes recommendations on new programs, budgets, student aid levels, licensure, and the statewide higher education plan. It also advises the Administration, the Legislature, and the Commission on Higher Education on specific issues affecting higher education.

### **Colleges and Universities**

The higher education system is comprised of 12 four-year public colleges and universities, 19 community colleges, and 26 private institutions. The State's 12 senior institutions operate autonomously, governed by their boards of trustees. Each of the senior public institutions has clearly defined missions that offer diverse opportunities to students. These include undergraduate, graduate, and professional degree programs, research facilities, academic support assistance, non-credit offerings, and training and continuing education programs. In addition to promoting their educational missions, colleges and universities provide cultural and recreational activities to communities through theater performances, concerts, guest speakers, and sports events.

### **Community Colleges**

The community colleges play a vital role in the higher education system by providing two-year associate degrees in specific fields, continuing education programs, and skill improvements options. For many of their students, the community colleges also serve as a gateway to higher-level degrees through transfers to four-year institutions.

### **Student Assistance Programs**

New Jersey is dedicated to the principle that higher education should be accessible to all – regardless of their socio-economic status. Consequently, financial assistance is provided under the auspices of the Higher Education Student Assistance Authority, including need-based and merit-based funding, specialty grants, federal student loans, and a tax-free saving incentives program for student attending colleges in New Jersey.

Rutgers University has over 800 buildings on its three main campuses and throughout the state. The building inventory includes everything from high tech lab and research facilities to historic landmark buildings and agricultural farm structures. A large number of these buildings were built between 1953 and 1972, and substantial resources are required to preserve and maintain these facilities for their intended use. A significant number of projects involve the repair and replacement of obsolete heating and cooling systems in these buildings.

**Operating Impact:** Increase: \$0 Decrease: \$9,100

The university will undertake energy conservation projects and invest in green, energy efficient, technologies to reduce the carbon footprint of the institution. Energy conservation projects include the replacement of deteriorated 35-year old underground pipes and insulation carrying high temperature hot water from the Busch Cogeneration Plant to buildings on the Busch and Livingston campuses. Examples of the type of new, energy efficient technology that Rutgers seeks to implement include a solar energy facility that uses photovoltaic panels to convert sunlight into electricity. These projects have the ability to return millions of dollars over the initial investment.

A new, state-of-the-art research lab and office facility will be built to house Rutgers' Department of Nutritional Sciences (first in the nation) and additional programs, relating to nutrition and health. The building will serve as a centerpiece for a major multi-disciplinary and collaborative multi-institutional initiative in nutrition, encompassing fields from molecular genetics and physiology, to pharmaceuticals and nutraceuticals, to public policy and education, to outreach to communities and districts throughout the State. The goal is to position Rutgers as "the nutrition university," focused on research, education, economic development and community service. The Nutrition Research Facility is to be built on the Cook Campus as a 80,000 gsf addition to the Center for Advanced Food Technology building, allowing for the relocation and consolidation of the nutrition department from Thompson Hall and Davison Hall, two older buildings on campus.

The Rutgers School of Business at Camden (RSBC) has an outstanding cadre of faculty and is highly regarded by the southern New Jersey business community, but the RSBC currently shares facilities with other disciplines in the areas of math and science. RSBC is the only school on the Rutgers Camden campus that does not have its own building. To provide the new dean with the ability to move the School forward, a building designed specifically for instruction of business courses, with case study rooms and interactive computerized classrooms is critical. A new 96,000 gsf building is proposed on North 5th Street near Pearl Street, where the new business school will frame one side of a proposed campus quadrangle opposite the new Camden Law School facility.

To ensure that University Hospital is fully prepared to meet its mission and responsibilities, the hospital must replace its emergency support, life safety and emergency mechanical systems. With much of the existing equipment aged (with critical components more than 30 years old) and no longer suitable to meet the needs of today's sensitive equipment, the capacity of the system no longer supports the emergency needs of the hospital. Failure to replace and upgrade the system has begun to compromise the hospital's ability to continue providing a full range of critical medical services and could severely jeopardize its ability during public emergencies to provide "surge capacity" for intensive care, trauma care and isolation requiring use of monitoring equipment, ventilators, etc. This would negatively impact every New Jersey State agency that relies on the hospital to coordinate medical services and serves as a major trauma provider. In addition, the hospital would not be able to meet its obligation under its agreement with the CDC.

UMDNJ requires university-wide systems and application projects and hardware and software infrastructure. Projects include telecommunication upgrades for wiring on the Newark campus, PBX system replacements on the central and southern campuses, and server replacements in the data center. Security upgrades would include the implementation of greater perimeter security along with a provisioning system for the positive identification and security authorization of faculty, staff, students and temporary constituents such as contract workers, consultants, agency nurses, etc.

The elevator in the Smith Library is in critical need of replacement. Installed when the Library was built in 1975, the elevator is poorly lit and requires frequent repair. Disabled patrons, who must use the elevator, are reluctant to do so because of the frequent breakdowns. The elevator provides access to the A-Level, and specific controls are needed to restrict its use by non-authorized personnel. New developments with regard to ADA compliance, safety, sound mechanical operation, lighting and high frequency use make the replacement of the elevator imperative.

Implementation of a comprehensive monitoring system will assist in developing a basic level of security to the exterior perimeter and interior areas of the University by reducing the potential level of exposure of the buildings and occupants to unscreened vehicles and people. A critical component of a comprehensive security plan is the use of state-of-the-art, closed circuit television equipment (CCTV), including cameras of the Pan, Tilt and Zoom variety and can be controlled to watch almost all exterior areas on and around the Newark Campus.

The School of Nursing is facing severe space shortage in classroom, conference room/seminar space and faculty offices. The current space in the SSB Building at the Newark campus is no longer adequate for SN's existing program needs and future growth. A comprehensive space needs analysis for SN is being developed on the Newark campus with an anticipation of renovating the SSB 6th floor. The 6th floor of the SSB building has not been renovated since the original 1950 building construction, and the floor still houses the original surgery suite of the old hospital. This space is not currently useable and requires substantial renovation, including asbestos abatement, to become classroom and office space that will meet current business needs and building construction codes.

**Operating Impact:** Increase: \$0 Decrease: \$0

The metabolic cart is a physiologic device that measures objectively the oxygen consumption during exercise, the energy expenditure at rest and during exercise, the resting metabolic rate of a person, and many of the pulmonary function values for the lung. This piece of equipment can be used in the two physical therapy labs as well as for the nutrition department and CAM in their research projects. It is also used as a teaching tool comparing predicted values of exercise to the objectively measured values of the cart, demonstrating how predicted values can either be over or under significantly from what is obtained objectively. This can then cause no progress in the patient or can be harmful to the patient.

Indirect Calorimeter: As part of the National Kidney Foundation's National Research Grant Program, a study proposal will be submitted that will develop a predictive equation for determining energy requirements for patients with end-stage kidney disease, treated with hemodialysis for life maintenance (Grant cycle-July 1, 2009-June 2010). This grant awards \$30,000.00 but such funds cannot be allocated towards the purchase of special equipment.

A clinical dilemma faced in renal nutrition is the accurate estimation of energy (nutrient) requirements for this complex patient population, plagued by several co-morbidities and medical complications. Currently, predictive energy equations are used in practice are extrapolated from other patient populations, and do not consider the unique nutritional challenges of chronic kidney disease. To validate such a predictive energy equation will require the direct measurement of energy expenditure via an indirect calorimeter. Developing this equation will have a far-reaching impact on patient care and outcomes, and may necessitate changes in clinical practice.

The Eric B. Chandler Health Center is a federally qualified health center run by the Robert Wood Johnson Medical School. The Center provides care for indigent patients and provides important educational experiences for medical students and residents. Patient visits have increased to the point whereby the Center has outgrown its current facility. A new facility will enable the center to meet the patient demand and allow the Center to more efficiently deliver care to its patients and educational experiences to its students and residents. The new facility will be 50,000 sq. ft. and a rough estimate of the cost is approximately \$30,000,000.

There is an immediate need for a cellular imaging core for research conducted by stem cell research scientists. The ability to visualize the dynamics of structures within cells and cells within developing tissue is critical. Digital deconvolution microscopy uniquely provides the highest possible resolution, as well as allowing rapid time-lapse observations to study ongoing processes in living cells. Another key technology will be the two photon laser scanning microscopy, which will allow for imaging chemical and structural dynamics in intact cells and tissue. In addition an FMRI will be critical.

With the completion of the Human Genome Projects, emphasis is shifting from the study of the gene to that of the protein, and thus to the science of Proteomics. It is believed that through Proteomics, new disease markers and drug targets can be identified that will help design products to diagnose, treat and prevent disease. The research of the clinical and basic scientists at the Medical School would be greatly enhanced if they had access an expanded Proteomics/Functional Genomics core facility. This facility would house the instrumentation and the technical and support staff of approximately 20,000 square feet.

Existing Clinical/Financial system was developed in-house over five years ago. In-house system was developed at a time when no commercial packages existed to satisfy the needs of the majority of dental schools. At this point, there are several commercial packages that will satisfy our clinical/financial needs: Patient Tracking, Student Tracking, Billing, Aging Reports, Patient Scheduler and Digital Radiography.

New Jersey Dental School proposes the development of a Center for Advanced Clinical Technology. This Center will serve as the home base for all activities related to advanced clinical technology, including implant therapy; CAD/CAM technology such as Procera; and other new emerging technologies. The Center will enable both UMDNJ-NJDS pre-doctoral and post-doctoral students to gain a hands-on clinical experience using these new materials and methods, as well as serve as a facility for providing hands-on continuing education.

The New Jersey Dental School is housed in a 30-year-old building with limited space and facilities. While the School has recently opened three new lecture halls, there is no dedicated quiet space for students to learn and study. Although some study space is available in the George Smith Library, it is not adequate for the student body. A separate, dedicated space suitable to accommodate students is required to maximize the potential of students to achieve.

Currently, we use a common hallway as our Dental Mechanical Shop. It is approximately 10 feet by 12 feet, much too small to complete our repair work. The entrance to an electrical switch gear room is inside of our shop, therefore we can not lock the shop. Ideally, we need a space approximately 20 feet by 20 feet. Our parts would be stored on several shelves with bins, so we could maintain an inventory and set reorder points. We would need 2 workbenches with storage above and below, a drill press, vise and grinder, compressed (drive) hot air, hot and cold water, vacuum and natural gas.

The New Jersey Dental School must upgrade its voice infrastructure. To date, not all offices have been upgraded to the Meridian I phone system, even though the University is already standardized on the PBX phone system. The new infrastructure would eliminate the antiquated analog/key telephone systems and would replace them with state-of-the-art digital technology, providing the user with many enhancements such as voice mail, conference call and intercom. Justification: Existing equipment is old and costly to maintain. New equipment will interface with the University-wide data network.
